Undergraduate Catalog 2001–03

Northwestern Undergraduate Catalog 2001–03 Volume XXIV, July 2001, Number 3

Northwestern (USPS 428-790) is published by Northwestern University, 633 Clark Street, Evanston, Illinois 60208-1114, and issued four times during the year: once in March and three times in July. Periodicals postage paid at Evanston, Illinois, and additional mailing offices. Postmaster: Send address changes to Northwestern University, 633 Clark Street, Evanston, Illinois 60208-1114. This catalog for the two academic years beginning September 1, 2001, contains University regulations and information about the programs and courses offered by the Judd A. and Marjorie Weinberg College of Arts and Sciences, School of Education and Social Policy, Robert R. McCormick School of Engineering and Applied Science, Medill School of Journalism, School of Music, School of Speech, and other undergraduate programs. Northwestern University reserves the right to change without notice any statement in this catalog concerning, but not limited to, rules, policies, tuition, fees, curricula, and courses.

## The University

Northwestern University provides opportunities of the highest caliber for intellectual, personal, and professional growth. Its wide-ranging academic offerings are enhanced by a highly collaborative and flexible environment and by the richness of Chicago. Through a combination of close interschool cooperation and a flexible academic calendar, both undergraduate and graduate students and faculty are able to customize education and research across disciplines. Northwestern is a place where faculty work closely with students and each other and where students at all levels interact as part of an innovative and technologically sophisticated learning community.

Northwestern's emphasis on effective communication, regardless of field of study, fosters the ability to think analytically and write and speak clearly and persuasively. The result is that Northwestern graduates are exceptionally well prepared for academic and career success and become leaders in their fields.

The University's locations in Evanston, the first suburb north of Chicago, and in Chicago provide outstanding intellectual, professional, social, and cultural opportunities in beautiful settings on the shore of Lake Michigan.

### The Undergraduate Experience

Northwestern provides an educational and extracurricular environment that enables students to become accomplished individuals and responsible citizens. Its alumni feel confident exploring a wide range of subjects and experiences, in school and beyond, regardless of their majors. Northwestern believes that students should not invest themselves so fully in one area that they're afraid to risk exploring unfamiliar academic disciplines. About 20 to 25 percent of freshmen enroll with a prospective major of "undecided"; many more change their minds and their majors before they graduate; and 25 percent of them transfer from one of Northwestern's undergraduate schools to another. Students frequently pursue two majors or even two degrees at the same time, and enterprising students, with their deans' permission,

occasionally construct their own majors or programs of study.

At the heart of a Northwestern education is the belief that a solid foundation in the liberal arts is essential, regardless of one's future plans. All students in the six undergraduate schools take courses in science, mathematics and technology, individual and social behavior, historical studies, the humanities, and fine arts. In addition to the traditional components of undergraduate education - general requirements and advanced work in the major - Northwestern prides itself on making unusual academic opportunities available. Students also are encouraged to pursue independent study, internships, research, and study abroad. At least 30 percent of Northwestern's undergraduates engage in internships, practicums, paid cooperative education programs, applied research, and other offcampus experiences, often for academic credit.

Underpinning the breadth of a Northwestern education is the quarter system, which gives students the opportunity to take more courses than they would under a traditional semester system. Undergraduates typically take 4 courses each quarter and 12 courses in an academic year.

In both its academic and extracurricular programs, Northwestern encourages students to obtain a broad understanding of the world in which they live and to cultivate the habits of critical inquiry, creativity, and reflection that characterize the educated person. The University places particular value on being able to communicate effectively, to interpret the developments in science and technology that shape our changing world, and to use the techniques of quantitative analysis that are necessary to effective professional and social life.

One of Northwestern's strongest traditions is the energetic involvement of its undergraduates in campus life, a tradition that often leads them beyond the campus itself. Northwestern is a major force in the economic, social, and cultural life of Evanston, Chicago, and nearby communities. Each year Northwestern students, faculty, and staff provide thousands of hours of volunteer service to the community.

### **Student Demographics**

Northwestern recruits students of demonstrated academic achievement from diverse social, ethnic, and economic backgrounds. All 50 states and more than 45 countries are represented in the undergraduate student body. Forty-five percent of the approximately 7,500 undergraduates are from the Midwest, 20 percent from the East, 19 percent from the West, 9 percent from the South, and 7 percent from foreign countries. More than half are female, and 27 percent are members of minority groups. Sixty percent enroll with financial aid. More than 90 percent earn a bachelor's degree within six years.

### A Historical Overview

Excellence has been Northwestern's goal since nine pioneering Chicagoans met in 1850 to establish an educational institution that would rival any in the eastern United States. That group — a physician, three attorneys, two businessmen, and three Methodist clergymen — envisioned a university "of the highest order of excellence" to serve the people of the Northwest Territory. Northwestern University was officially established on January 28, 1851, when its act of incorporation was passed by the Illinois legislature.

In 1853 the founders purchased a 379-acre tract of farmland along Lake Michigan 12 miles north of Chicago as a site for the new university. The location so impressed founder Orrington Lunt that he wrote, "I could not rid myself of the fairy visions constantly presenting themselves in fanciful beauties — of the gently waving lake — its pebbly shore — the beautiful oak openings and bluffs beyond."

The town that grew up around Northwestern was named Evanston in honor of one of the University's most prominent founders, John Evans. A physician and businessman, Evans provided the cash to place a \$1,000 down payment on the land and assumed responsibility for the mortgage covering the balance. Evans was chairman of the board from the University's founding until his death in 1897.

After completing its first building in 1855, Northwestern began classes that fall with two faculty members and 10 male students. In 1869 it enrolled its first female students, thereby becoming a pioneer in the higher education of women. By 1900 the University was composed of a liberal arts college and six professional schools, including the schools of law and medicine, with a total of 2,700 students. With the establishment of the Graduate School in 1910, Northwestern adopted the German university model of providing graduate as well as undergraduate instruction and stressing research along with teaching.

As Northwestern celebrates its sesquicentennial, it enjoys a position as one of the country's leading private research universities. Approximately 16,300 fulltime and part-time students are enrolled in 11 colleges and schools located on lakefront campuses in Evanston and Chicago. Undergraduate education is on the Evanston campus in the Judd A. and Marjorie Weinberg College of Arts and Sciences, the School of Education and Social Policy, the Robert R. McCormick School of Engineering and Applied Science, the Medill School of Journalism, the School of Music, and the School of Speech.

### Accreditation

Northwestern University is accredited by the North Central Association of Colleges and Schools. Other professional, college, school, and departmental accreditations are listed under the respective areas in the following section.

### **Schools and Divisions**

The undergraduate schools offer the programs and courses of instruction described in the respective sections of this catalog. Undergraduate study may lead to the bachelor's degree as a final academic goal or to advanced work toward a graduate or professional degree.

### **Evanston Campus**

The schools and other institutional divisions, in order of establishment, are as follows:

- The Judd A. and Marjorie Weinberg College of Arts and Sciences (1851) offers the degree of bachelor of arts. Through the School of Continuing Studies, Weinberg College also offers the degrees of bachelor of philosophy and bachelor of science in general studies and two certificates in arts and sciences. The American Chemical Society and the American Psychological Association have accredited Weinberg College programs in their respective fields.
- The School of Speech (1878), with departments of communication sciences and disorders, communication studies, performance studies, radio/television/ film, and theater, offers the bachelor of science in speech degree. Through the School of Continuing Studies, the School of Speech offers the bachelor

3

of philosophy in communication. The school also offers the degree of master of science in communication. Its programs are accredited by the American Speech-Language-Hearing Association and the National Association of Schools of Theatre.

- The School of Music (1895) offers the degrees of bachelor of music and bachelor of arts in music. In its graduate division the School of Music offers the degrees of doctor of music and master of music and a certificate in performance. The school is accredited by the National Association of Schools of Music.
- The Kellogg Graduate School of Management (1908) offers the master of business administration degree. It provides students with the opportunity to study general management, finance, marketing, entrepreneurship, family business, e-business, health services, manufacturing, and public and nonprofit, real estate, and biotechnology management. In addition to the full-time MBA, Kellogg offers a parttime evening MBA through its Managers' Program on Northwestern's Chicago campus, a weekend executive MBA through the Executive Masters' Program (EMP) on the Evanston campus, and international executive MBA (IEMBA) programs in Europe, the Middle East, and Asia. Kellogg also offers a wide range of nondegreed executive education courses at its Allen Center on the Evanston campus. Kellogg is accredited by the American Assembly of Collegiate Schools of Business and the Accrediting Commission on Graduate Education for Hospital Administration.
- The Robert R. McCormick School of Engineering and Applied Science (1909) offers the bachelor of science degree in applied mathematics, biomedical engineering, chemical engineering, civil engineering, computer engineering, computer science, electrical engineering, engineering science, environmental engineering, industrial engineering, manufacturing engineering, materials science and engineering, mechanical engineering, and medical engineering (for students enrolled in the Honors Program in Medical Education). All departments offer advanced study for graduate students. The McCormick School also offers master's degrees in engineering management, manufacturing engineering, information technology, and project management and, jointly with the Kellogg School, the master of management in manufacturing. McCormick programs are accredited by the Engineering Accreditation Council of the Accreditation Board for Engineering and Technology.

- The Graduate School (1910) controls all advanced programs leading to the degrees of doctor of philosophy, master of arts, master of fine arts, and master of science. The Graduate School bulletin, describing master's and doctoral programs in all schools and departments, is available on request.
- Summer Session (1920) provides summer programs for undergraduate, graduate, and visiting students.
- The Medill School of Journalism (1921) offers the degree of bachelor of science in journalism as well as master of science degrees in journalism and integrated marketing communications. Medill is accredited by the Accrediting Council on Education in Journalism and Mass Communication.
- The School of Education and Social Policy (1926) offers the degrees of bachelor of science in education and social policy, master of science in education and social policy, master of arts in learning sciences, and master of science in marital and family therapy. Programs in the School of Education and Social Policy are accredited by the Illinois Office of Education, State Teacher Certification Board; the Illinois Department of Registration and Education; and the American Psychological Association.

### **Chicago Campus**

Schools and institutional divisions on the Chicago campus, in order of establishment, are as follows:

• The Medical School (1859) offers the degrees of doctor of medicine and doctor of physical therapy. High school graduates accepted for the Honors Program in Medical Education can receive the MD degree from the Medical School seven years after they enter Weinberg College, the McCormick School, or the School of Speech as freshmen. The Medical School and McCormick School cooperate in biomedical engineering programs, and joint degree programs with the Graduate School and Kellogg School offer an MD degree as well as a PhD or MBA degree. The Medical School has accreditation from the Liaison Committee on Medical Education, Accreditation Council for Continuing Medical Education, American Psychological Association, American Board for Certification in Prosthetics and Orthotics, American Physical Therapy Association, and Accreditation Council for Graduate Medical Education.

- The School of Law (1859) provides a superior foundation in legal reasoning, analysis, and writing. It offers the degrees of juris doctor, master of laws, and doctor of juridical science. The School of Law and the Kellogg School offer a joint degree program allowing students to earn both juris doctor and master of business administration degrees in three years. Another joint program with Kellogg allows international and foreign-trained students to earn a master of laws degree and a certificate of management in one year. Students also can participate in a five-year program to earn a JD and a PhD in one of the social sciences. The school is accredited by the American Bar Association and the Association for American Law Schools.
- The School of Continuing Studies (1933) is the continuing education division of the University, providing an opportunity for adults to return to school in the evenings or on Saturdays on a parttime or full-time basis to earn a degree or to take courses for personal enrichment or professional mobility. Classes are offered on both the Chicago and the Evanston campuses. Through the School of Continuing Studies, Weinberg College offers the degrees of bachelor of philosophy and bachelor of science in general studies; the School of Speech offers the bachelor of philosophy in communication; and the Graduate School offers the master of arts in liberal studies and the master of literature. SCS also offers several certificate programs, including business programs in accounting and administrative techniques, a postbaccalaureate premedicine program, and noncredit professional development programs.

### **University Centers**

University-wide and specialized research centers facilitate new scholarly approaches to problems by enabling faculty to collaborate across the boundaries of traditional disciplines. These interdisciplinary centers have profound implications for undergraduates because such research often alters theory and practice within a given academic discipline and results in the development of new curricular programs.

Students also are involved directly with the centers through lectures or other special events and, in some cases, through research projects. The University's centers and programs include the following:

- Program of African Studies
- Institute for Bioengineering and Nanoscience in Advanced Medicine
- Center for Catalysis and Surface Science
- Center for Circadian Biology and Medicine
- DND Synchrotron Research Center
- Institute for Health Services Research and Policy Studies
- Materials Research Center
- Materials Research Institute
- Center for Mathematical Studies in Economics and Management Science
- Institute for Nanotechnology
- Institute for Neuroscience
- Institute for Policy Research
- Center for Public Safety
- Center for Reproductive Science
- Transportation Center

For detailed information about these centers, see www.northwestern.edu/research/centersfacilities.html.

### Libraries

Undergraduates at Northwestern have access to a wealth of library resources and services. With more than 4 million volumes in the University Library system, the Galter Health Sciences Library, and the Pritzker Legal Research Center, Northwestern offers its students the 10th largest library collection among private universities in the United States. Undergraduates are encouraged to explore the full range of resources available to them and to develop their skills as information seekers.

Northwestern undergraduates have full access to interlibrary loan services and to materials from libraries worldwide. Through the Infopass program, students can gain admittance to other collections in the Chicago area, including those of the Newberry Library, the Field Museum library, the Art Institute of Chicago library, and other academic and private libraries.

### **University Library**

University Library consists of the main library, which houses the University's major collections in the humanities and social sciences, as well as several specialized research collections; the adjoining Charles Deering Library, which houses fine arts and other specialized collections; the Seeley G. Mudd Library for Science and Engineering; the Geology Library; the Mathematics Library; and the Joseph Schaffner Library, which supports the research needs of students on the Chicago campus.

University Library offers many electronic research and textual resources, both within the library and on the campus network. NUcat, the online catalog of University Library, provides bibliographic, location, and circulation status information for materials from these libraries. NUcat and many other resources and services are available on the Web at www.library.northwestern.edu.

### Main Library (Evanston Campus)

The main library building houses collections in three research towers: north for the social sciences, east for history, and south for the humanities.

The main library's General Information Center and Reference Department, both located on level 1, offer students research assistance and support. The General Information Center, which serves as a gateway to the library, has staff to answer questions and state-of-the-art workstations to access information electronically. The Reference Department offers in-depth research assistance and consultation and instructional services. A 50,000-volume reference collection and many research databases make the Reference Department an important resource.

Also located on level 1 are the Circulation Department, the Periodical/Newspaper-Microtext Reading Room, the New Book Alcove, the Interlibrary Loan Department, and the Government Publications and Maps Department. Featuring an extensive collection of federal, state, and international documents, the Government Publications and Maps Department is a depository for documents of the United States, the United Nations, the state of Illinois, and the European Union, as well as selected publications of other international agencies and state and local governments.

The Periodicals and Newspapers Reading Room contains current periodicals, extensive collections of newspapers and periodicals, and primary research materials in microform. On the lower level of the library there are computing labs and classrooms run by the Academic Technologies division of Information Technology.

The Marjorie Iglow Mitchell Multimedia Center, Forum Room, and Video Theater (for special programs and video presentations); Core/Reserve Collections; and a student lounge occupy level 2. The Multimedia Center features a videotape collection of classic films, documentaries, and performing arts titles. The noncirculating Core Collection holds 35,000 books in all disciplines, ensuring easy access and permanent availability of works essential to undergraduates.

Three special units are located on level 5. The Curriculum Collection houses K-12 textbooks and children's literature. The Melville J. Herskovits Library of African Studies (popularly called Africana) is known internationally for its comprehensive collection of materials on every aspect of Africa. The Transportation Library, one of the major collections of its kind in the United States, specializes in transportation socioeconomics, law enforcement, police administration, and environmental impact statements.

### Charles Deering Library (Evanston Campus)

The Charles Deering Library, attached to the main library, houses the Art Collection, University Archives, Charles Deering McCormick Library of Special Collections, and Music Library and Listening Center. The holdings of Special Collections include 20th-Century Collections, underground press publications, women's movement literature, and numerous rare books, manuscripts, limited editions, and fine bindings. The Music Library meets the curriculum, research, and performance needs of students and faculty at the School of Music. This library contains 170,000 scores, journals, books, manuscripts, and nearly 67,000 sound recordings, which can be heard in the Listening Center.

### Seeley G. Mudd Library for Science and Engineering, Geology Library, and Mathematics Library (Evanston Campus)

The Seeley G. Mudd Library for Science and Engineering houses books and journals in applied mathematics, astronomy, biological sciences, chemistry, computer science, engineering, and physics. Two smaller departmental libraries, the Geology Library in Locy Hall and the Mathematics Library in the Lunt Building, also serve the Evanston campus.

### Joseph Schaffner Library (Chicago Campus)

The largely electronic Joseph Schaffner Library in Wieboldt Hall serves the School of Continuing Studies, the evening Managers' Program of the Kellogg Graduate School of Management, and the Medill School of Journalism graduate programs.

### **Other Libraries**

The Galter Health Sciences Library, which serves the Medical School, and the Pritzker Legal Research Center, which serves the School of Law, are located on the Chicago campus and are open to all Northwestern students. The collections of these libraries are listed in NUcat, the library's online catalog. Materials can be checked out directly or can be sent to Evanston through interlibrary loan.

Also open to all Northwestern students are the outstanding collections on religion held in the United Library of Garrett-Evangelical and Seabury Western Theological Seminaries, located on the Evanston campus. The United Library's holdings are listed in NUcat.

### Computing

### **Computer Study**

Students interested in majoring in computing are referred to the Computing and Information Systems Program in Weinberg College and the Departments of Computer Science and of Electrical and Computer Engineering in the McCormick School of Engineering and Applied Science.

### Information Technology

At Northwestern computers are used in a wide variety of applications designed to enhance the education of students both inside and outside the classroom. The need to understand computer applications cuts across disciplines. Students in the arts, humanities, journalism, and law have as much to gain from computer use as do those in the physical and social sciences, engineering, medicine, and business.

The Information Technology (IT) division is the principal campus unit charged with planning and managing computing facilities and services for students, faculty, and staff.

Buildings on the Evanston and Chicago campuses are connected through high-speed networks to the Internet, allowing access to a wealth of information at other universities and organizations worldwide. All sleeping rooms in University residence halls are connected to the University's network, giving students with network services accounts convenient access to electronic mail; the World Wide Web, including the University home page (www.northwestern.edu); the student portal (www.hereandnow.northwestern.edu), and NUcat, the University's online library catalog.

Through IT's Academic Technologies area, students can access a variety of resources in a networked environment, including computer lab/ classrooms with Windows and Macintosh units and a UNIX workstation lab/classroom. In addition, students may use specialized computer labs available in the six undergraduate schools.

At the beginning of each academic year, IT's Technology Support Services area welcomes new students to Northwestern. IT has developed a CD-ROM–based tutorial to acclimate students to the University's electronic environment. The CD-ROMs include Northwestern Internet software installers for Windows 95/98/Me, Windows NT Workstation/2000 Professional, and Macintosh computers. To accommodate students with little computer experience, IT schedules classes on computer basics during New Student Week.

The IT Information Center in Kresge Centennial Hall, 1859 Sheridan Road on the Evanston campus, is Northwestern's primary information resource for computing and networking. The center provides walkin and phone consulting on University-supported hardware, software, operating systems, and computing facilities. Its hours are 8 a.m. to 10 p.m. Monday through Thursday, 8 a.m. to 5 p.m. Friday, 9 a.m. to 5 p.m. Saturday, and noon to 10 p.m. Sunday.

On the Chicago campus, the IT office is located in suite 600 of Abbott Hall, 710 North Lake Shore Drive. Its hours are 8:30 a.m. to 6 p.m. Monday through Thursday and 8:30 a.m. to 5 p.m. Friday. A walk-in convenience center for password problems and software purchases, this office provides technical assistance by appointment only.

Call 847/467-ITSS to speak to a consultant for either campus.

### **Student Services**

### Student Affairs

The Office of the Vice President for Student Affairs is responsible for many programs and services available to Northwestern students. Students are encouraged to take advantage of these opportunities and services, which are designed to help them establish and meet personal, academic, and career goals; assist them in acquiring skills to confront problems and issues in

7

their lives; and provide them with essential services as part of a residential community.

In recognition of students as members of the Northwestern University community, the University has adopted a statement on student rights and responsibilities (see the *Student Handbook* for the complete statement).

### African American Student Affairs

The services and activities of African American Student Affairs include advice, support, and referral on personal, academic, and career issues; cocurricular group advising; tutoring in math, the sciences, economics, and writing; New Student Week activities, lectures, and receptions; coordination of publicity for Black History Month events; and cosponsorship of a major musical program.

The African American Student Affairs building is home to a number of student organizations and provides office and meeting space for students as well as staff. The programs of this office are designed to promote academic achievement, provide cultural and social outlets, and give voice to the needs and concerns of the African American student community.

### **Counseling and Psychological Services Center**

The Counseling and Psychological Services Center (CAPS) is the University's primary counseling resource. CAPS counselors, social workers, psychologists, and psychiatrists offer students a variety of academic and personal services, including individual and group counseling. When students have problems, talking with an experienced counselor often can provide great relief. Students may talk with a counselor confidentially about specific problems such as managing stress and difficult relationships or about nonspecific feelings of anxiety or loneliness.

CAPS offers group counseling on eating behavior, self-esteem, sexual identity, shyness, grief, stress management, self-exploration, and relationship enhancement. Groups and topics can be added in response to student interests or needs.

While there is a limit of 12 individual CAPS counseling sessions, this office can refer students who will benefit from additional help to other appropriate and affordable counseling facilities. Students who participate in group counseling are still eligible for 12 individual sessions.

Counseling is available to full-time students (those registered for at least three courses). Crisis intervention and consultation, assessment, and referral resources are available to part-time students.

### Health Service

All students are required to have hospitalization insurance coverage. For information about the program offered through the University, consult the Health Service insurance office.

The University maintains a health service for students, including a pharmacy, laboratory, radiology suite, health education program, and six-bed infirmary at Searle Hall. Students registered for at least three credits' worth of courses are entitled to full privileges of this service. Students registered for less than three credits' worth of courses may have the same privileges by purchasing an optional program within one week after registration. The Health Service has forms for the optional program; the fee may be paid by check.

Full-time students must comply with Illinois state and Northwestern University health, immunization, and insurance requirements, which are described in Health Service and insurance office letters sent to them after they are accepted to the University. They must return the completed medical and insurance forms sent with the letters at least six weeks before registration. If they fail to comply, they will be subject to late fees and their registration will be withheld until they meet these requirements.

Former Northwestern students who have been absent from the campus for two or more years must meet the same requirements as new students. Students continuing into a new program must notify the Health Service to reactivate and update their medical records. See the Health Service brochure for more information.

### Hispanic/Latino Student Services

The coordinator of Hispanic/Latino Student Services provides support, services, and programs to Hispanic/ Latino students and student groups on campus. The staff advocates for the needs of Hispanic/Latino students, identifies problem areas, articulates strategies to address these concerns, and provides opportunities for the campus community to learn more about Hispanic/ Latino culture, students, needs, and issues. The services and programs offered by the office are rooted in a strong belief that diversity is a valuable part of the overall educational experience at Northwestern.

### Norris University Center

Norris University Center is the community center of the University. It provides programs and services that enhance the quality of campus life for students, faculty, parents, staff, alumni, and guests. Norris Center and Northwestern's many student organizations sponsor a variety of activities that promote social, cultural, and educational interaction outside the classroom. Norris Center works to develop a campus environment that enables students to become accomplished and informed individuals, sensitive to the needs of a pluralistic society.

Additionally, Norris Center provides amenities and conveniences that enrich the quality of daily campus life for the University community. These include the campus bookstore, Norris Main Desk, a food court, meeting rooms, a full-service branch bank and multiple ATMs, a box office, a convenience store, WildCARD office, Pulse Copy Center, and more than 25 student organization offices. Special services include a game room, a wide variety of minicourses, outdoor recreation equipment rental, sound and sight equipment rental, a leisure library, and an interactive information kiosk.

Through the Dittmar Memorial Art Gallery and the craft studio, Norris demonstrates the importance of the visual arts to the campus community.

### **Organizations and Activities**

The Campus Activities Office at Norris Center provides leadership development and advising services to student groups, many of which are headquartered at Norris. Students brought together by common interests, projects, or cultural heritage may petition for recognition as a student organization to the University chaplain, University departments, the Office of the Vice President for Student Affairs, or the Associated Student Government, which also is the liaison for students, student organizations, and the University administration. Other representative organizations include the Interfraternity Council; Panhellenic Association; Residence Halls Association; For Members Only; Black Greek Council; Asian American Advisory Board; Bisexual, Gay, and Lesbian Alliance; Alianza; and Women's Coalition.

Programs and services to the campus are provided by such groups as the Activities and Organizations Board, A&O Productions, Arts Alliance, Dance Marathon, Northwestern Community Development Council, Legal Aid, Student Blood Services, and many others. Other organizations, particularly in the areas of cultural/ethnic affiliation and performing arts, complement academic interests and are open to all students. Music, dance, and theater groups as well as a daily newspaper, yearbook, radio station, and literary magazines provide outlets for a variety of interests.

### Norris Main Desk

The main desk at Norris Center provides the University with a central location for inquiries regarding general campus and event information. Visitors are welcome to call or drop by when on campus to ask about University services and special events.

### **Residence Halls and Food Services**

Students at Northwestern have a wide variety of living facilities available to them. Smaller residences accommodate as few as 27 students; larger units house more than 600. Most rooms are doubles, but residences also contain single, triple, quadruple, and suite arrangements. A student may select a residential college, a coeducational residence hall, or a facility where all members are of the same sex. Some of the houses are older, ivy-covered residences; others are modern, recently built halls. Each building has its own character and spirit and its own distinct advantages.

Approximately 4,100 undergraduate students live in the University's residence halls; another 900 students have chosen to live in fraternity and sorority houses. The remaining approximately 2,700 undergraduates commute from home or live off campus.

The residence halls bring together individual students with diverse backgrounds and various interests. Each residence hall is free to set its own norms of behavior within the general guidelines of the law and University policy. Students adopt constitutions and elect their own hall officers. Living in a residence hall makes a student a member of its government, with the rights, privileges, and responsibilities of membership.

Residence hall activities are planned by the officers and developed by the residents to provide social, academic, and cultural experiences. These programs are financially supported through voluntary social fees.

Students take their meals at any of the six dining facilities located in the larger residence halls. Twenty meals are available each week: breakfast, lunch, and dinner, Monday to Saturday, and brunch and dinner on Sunday. Both traditional and flex meal plans are available. The traditional plans offer a fixed number

9

of meals per week and may be used only in the residence halls food services. The flex meal plans provide a fixed number of meals per quarter and a greater allocation of Bonus Bucks than the traditional meal plans. These plans include a quarterly allocation of Bonus Bucks, which may be used for guest meal purchases and at the retail food services on campus.

Residents must sign a contract for a minimum of 13 traditional meals per week, selecting whichever 13 meals meet their individual needs and schedules. They also have the option to contract for 16 or 19 traditional meals per week for an additional charge.

Complete information about Northwestern's residences, including rental rates, is mailed to applicants after they have been admitted to the University and paid the required tuition deposit.

### Student Affairs Office

The Office of Student Affairs in Scott Hall is a general source of information and referral for students with personal and academic problems or concerns. This office also coordinates orientation programs for new students, plans student programs, and produces publications for parents of undergraduates.

In addition, the Office of Student Affairs implements educational programs on the prevention of sexual harassment and assault. Students who believe they have been victims of sexual harassment by other students and who have exhausted the administrative procedures set forth in the University's Policy and Guidelines on Sexual Harrassment may file a complaint with the assistant vice president for student affairs or the assistant to the assistant vice president for student affairs, who oversee the University Hearing and Appeals System and the Sexual Assault Hearing and Appeals System.

### University Career Services

University Career Services comprises the following three offices at 620 Lincoln Street:

### **Career Development Center**

The Career Development Center offers counseling, advising, and testing to help students choose a career, plan graduate or professional study, and enhance study skills. The center also maintains and processes recommendation and credential files to assist students with graduate school and employment applications. The center's career resource library has books and other printed materials as well as video- and audiotapes and other media on careers, financial aid for graduate education, and study skills. The collection also includes self-assessment inventories, college catalogs on microfiche, and graduate and professional school directories.

Individual and group career counseling is available to help students discuss career possibilities, declare a major, explore options for graduate school, and improve their ability to make decisions. Through use of assessment inventories and software applications, counselors assist students in identifying factors to consider as they search for a career.

Advising, workshops, and printed materials are available to students seeking to enhance their study skills or time management techniques.

Northwestern is a national test center for the GRE, GMAT, LSAT, and MCAT. The Career Development Center has information about the dates and locations, calendars, bulletins, and registration forms for these tests.

### Northwestern University Student Employment Program

The Northwestern University Student Employment Program (NUSEP) offers information to assist students in finding part-time jobs, full-time summer employment, and academic-year internships.

### **Placement Center**

The Placement Center offers a broad array of services, programs, and resources to assist students in developing and implementing career plans. It works closely with the Career Development Center and NUSEP to provide students with comprehensive career planning and employment services.

The Placement Center, which is located at 620 Lincoln Street, provides the following services to enrolled Northwestern students. Some services also are available to alumni.

- Candidate referral: All students registered at the Placement Center have their electronic résumés listed in the Placement Center's candidate database. Candidate referral electronically links qualified individuals with bona fide employers listing immediate professional openings. Candidate referral is appropriate for all graduating students seeking fulltime employment; it serves employers in all fields nationwide.
- Campus interviews: Each year hundreds of organizations in business, industry, and government send

representatives to campus to interview graduating students for postgraduation employment. Campus interviews attract large employers with recurring employment needs. The interviews normally begin in October and continue through April of each academic year.

- Job listings: The Placement Center annually receives and posts thousands of job openings. Job vacancies are entered into the center's database, which students may review.
- Career information: The Placement Center has employer files, literature, and videotapes; occupational and salary information; and general reference materials on careers and employment. State-of-theart computer programs also assist students in researching occupations, employers, and career options.
- Workshops and presentations: Workshops on developing a résumé, finding a job, and interviewing are offered regularly throughout the year. Dozens of employers schedule preinterview presentations in the fall and winter to give students information about their employment opportunities. In addition, the Placement Center provides special topic programs and several special events each year, including Career Expo, a campuswide job fair held each January.
- Individual consultation: Students may schedule individual appointments with a placement consultant who is assigned to an academic major. Individual consultation is provided on planning a career, preparing a résumé, interviewing, and job search strategies.

To meet the needs of students seeking careers in journalism or music, specific school-based placement services also are available. The Medill School of Journalism Placement Office seeks job opportunities in journalism and invites recruiters to campus from the media, advertising, and publishing to interview graduating seniors and alumni. The School of Music placement services are available for graduating music students and alumni. The office assists job seekers registered there in preparing and maintaining a credential file and notifies them of vacancies for music teachers and performers.

### University Chaplain

The Office of the University Chaplain is available to meet the religious concerns and needs of members of the University community. Several religious groups, including major Protestant denominations, the Roman Catholic church, and the Jewish community, sponsor ministries to the University's students and faculty. Although these campus ministries are independent of Northwestern University, the Chaplain's Office serves as the University's liaison with all religious groups represented there, and it facilitates and coordinates their activities. Information about campus religious organizations is published in "Religious Life at Northwestern University," available from the Chaplain's Office. The Chaplain's Office also recognizes student religious organizations on behalf of the University.

The Alice S. Millar Chapel and Religious Center, which includes Parkes Hall and the Jeanne Vail Meditation Chapel, has facilities for religious programs and services such as lectures, study groups, discussions on faith and life, weddings, baptisms, and other special events. The facilities are available to religious groups of all faiths and to other University and community groups by arrangement through the Chaplain's Office. The university chaplain and other campus religious counselors can meet with individuals and groups as counselors, teachers, or resource persons.

### Services for Students with Disabilities

The Office of Services for Students with Disabilities provides services and referrals for Northwestern students with disabilities. Students with disabilities should contact the office for assistance and guidance in meeting their academic obligations.

It is Northwestern University policy to ensure that no qualified student with a disability is denied the benefits of, excluded from participation in, or otherwise subjected to discrimination in any University program or activity. In response to a request made by a qualified student with a documented disability, the University will arrange, at no cost to the student, for the provision of educational auxiliary aids and reasonable academic accommodations that the University determines necessary to afford such student the opportunity for full participation in University programs.

Northwestern University's programs and activities are accessible for full participation to all its students, including those with mobility problems and with difficulties such as learning disabilities or auditory, visual, or other special problems.

A brochure, "Services for Students with Disabilities," describing various support services for students with disabilities, is available in University admission offices and in the Office of Services for Students with Disabilities. The brochure includes maps of the Evanston and Chicago campuses indicating building access and parking locations.

### **International Office**

Foreign students, visiting scholars, faculty, and staff will find assistance for themselves and their families at the International Office. The main focus of the office is immigration- and visa-related matters. The office provides specific instruction on the rights and responsibilities of each visa category, including the proper forms for arrival, travel, sending for families, and work permission. In addition, it serves as an information center to help visitors locate the services and activities available both on campus and in the larger community.

A volunteer organization, the Community Council for International Students, works with the office to provide international visitors such services as a resale shop, English tutoring, the International-American Women's Group, and a play group for children. All international visitors are encouraged to ask for information at the International Office.

### Women's Center

The Women's Center is a gathering place for all students, staff, and faculty where the achievements of women are celebrated. It serves the needs of all University women across lines of race, class, and sexual orientation, with the goal of achieving gender equity. The center provides educational programming with a particular emphasis on women's health, women and leadership, career and professional development, safety and self-defense, stress management, and issues of balancing work and family or other work/life concerns. The center provides advocacy services for women and men who have experienced sexual harassment, sexual assault, relationship violence, and discrimination. Counseling services are provided through individual appointments and support groups. Additional services include a referral service and resource library. Students may call 847/491-7360 or 312/503-3400 for information on programs or services, or they may check out the Web site www.northwestern.edu/womencenter.

### Fitness and Recreation

All students at Northwestern are strongly encouraged to participate in Fitness and Recreation's activities, which include intramural, club, informal, and instructional sport and fitness programs. Intramural competition is conducted in a variety of individual and team sports. League play and tournaments are provided for men and women, both separately and corecreationally. Competition is organized for individuals and teams, by independent groups, living units, fraternities, sororities, and University departments and organizations.

Sport clubs offer competitive and noncompetitive sports experiences. Extramural competition, with outside institutions and sports groups, is available in baseball, basketball, crew, cycling, fencing, ice hockey, lacrosse, rugby, running, sailing, ski racing, soccer, tennis, Ultimate Frisbee, volleyball, and water polo. Noncompetitive special-interest clubs include aikido, karate, tae kwon do, and jujitsu. Clubs are student directed.

Drop-in recreation periods are scheduled throughout the day and evening at Blomquist Recreation Center, Patten Gymnasium, and the Henry Crown Sports Pavilion and Norris Aquatics Center. Included are facilities for aerobics, badminton, basketball, fitness activities, floor hockey, jogging, racquetball, squash, swimming, tennis, volleyball, and weight training.

Noncredit instructional sports classes are offered in more than 30 areas. Students can register for sports and fitness classes by visiting the fitness and recreation registration office in the sports pavilion and paying a nominal fee. Courses for each quarter are listed in the "Programs and Services" guide and on the Fitness and Recreation Web site (www.northwestern.edu/fitnessrecreation).

The Sailing Center offers instructional and informal sailing programs for beginning and novice sailors. The fleet consists of 420 class and laser sailboats as well as Windsurfers.

### **University Police**

The University Police Department is responsible for crime prevention, law enforcement, parking control, special events, and emergency management on both the Evanston and Chicago campuses. University police officers are on duty 24 hours a day, seven days a week. They are police academy graduates with full police authority; most have bachelor's degrees.

The police division on the Evanston campus provides a number of services, including a crime prevention program, speaking engagements, unlocking of vehicles, residence hall security checks, sale of bicycle locks (at cost), and loan of battery jumper cables. Emergency phones on campus, marked by blue lights, operate when a person lifts the receiver or pushes the button.

Additional information about campus crime and crime prevention programs is available by requesting a copy of "Campus Safety: A Shared Responsibility" from the University Police Department, 1819 Hinman Avenue, Evanston, Illinois 60208-1320.

### Motor Vebicles

Regulations governing the possession, operation, and parking of motor vehicles on the Evanston campus are described in the parking regulations handout available at the Parking Office, 1819 Hinman Avenue, or online at www.northwestern.edu/up/parking. Under most circumstances freshmen and sophomores may not have motor vehicles while living on campus. A lottery distributes a limited number of Ryan Field parking permits to juniors living on campus. Exceptions to these rules may be granted only by the Parking Committee.

Parking permits are required in campus lots from 7:30 a.m. to 4 p.m. Monday through Friday (official holidays excluded), except in lots that are designated in the regulations as 24-hour enforced.

A walking zone surrounds the campus. Those who live off campus but within the zone are prohibited from purchasing permits. Information about the walking zone is available from the Parking Office or online at www.northwestern.edu/up/parking/eligibility.html.

### Personal Losses

The University is not responsible for the loss of or damage to personal property belonging to students in any building it owns, whether the loss or damage occurs by theft, fire, or an unknown cause.

## **Undergraduate Education**

### Admission

### **General Requirements for Admission**

Northwestern University historically has sought a student body of high ability and diversity representing a cross section of American society.

It is the policy of Northwestern University not to discriminate against any individual on the basis of race, color, religion, national origin, sex, sexual orientation, marital status, age, disability, or veteran status in matters of admissions, employment, housing, or services or in the educational programs or activities it operates, in accordance with civil rights legislation and University commitment.

Any alleged violations of this policy or questions regarding the law with respect to nondiscrimination should be directed to Director of Equal Employment Opportunity, Affirmative Action, and Disability Services, 720 University Place, Evanston, Illinois 60208-1147, phone 847/491-7458; Office of the Provost, Rebecca Crown Center, Evanston, Illinois 60208-1101.

Candidates for admission should demonstrate a level of performance in curricular and extracurricular areas that indicates they will be able to compete successfully in a competitive academic environment. In the selection of students, careful attention is given to the ability of each candidate as evidenced by academic records and the results of entrance tests as well as by character and personality. The University attempts to select students who are committed to scholarship and who have shown a willingness to become involved in their expressed interest areas. In determining whether to accept a candidate, the University considers

- secondary school record
- college record (required for transfer candidates)
- recommendations from school officials and other persons who have information pertinent to the candidate's probable success at Northwestern
- results of required or recommended tests (the Scholastic Assessment Test [SAT] I of the College Entrance Examination Board or American College

Test [ACT], required of all candidates; three SAT IIs, required of candidates for certain special programs and of all home-schooled applicants [see table on page 15] and recommended for other candidates)

- music audition (required for School of Music candidates)
- the candidate's statements on the application and other evidence of special skills, such as writing, art, music, mathematics, and science, or of special accomplishments in extracurricular areas of interest
- any other information received by the University that bears on the candidate's readiness for study at Northwestern

### SAT IIs

### **Recommended for Regular Programs**

- Weinberg College of Arts and Sciences, School of Education and Social Policy, Medill School of Journalism, School of Music, and School of Speech: Writing and two others of student's choice
- McCormick School of Engineering and Applied Science: Writing, Mathematics I or IIC, and Chemistry or Physics

### Required for Special Programs and Home-Schooled Applicants

- Honors Program in Medical Education: Writing, Mathematics IIC, and Chemistry
- Integrated Science Program: Mathematics IIC, Chemistry or Physics, and another science unless Writing is required for another application
- Home-schooled applicants: Writing, Mathematics IIC, and a third test of their choice

### **Required Subjects**

A broad academic experience in high school is the best preparation for admission to Northwestern. Whatever fields of study students follow, the best foundation consists of reading, writing, and mathematics. The value of thorough training in fundamental subjects cannot be overemphasized. In considering the academic record of a candidate for admission to Northwestern, the Office of Undergraduate Admission notes the subjects studied and the grades received. The student's record should include a minimum of 16 units. (A unit represents a course studied for one year.)

The subject recommendations in the following list represent the minimum requirements for entrance to the University. Allowances are made to permit students to pursue special areas of academic interest. Most applicants present more academic subjects than the minimum.

### **Required Units**

Weinberg College, the Medill School of Journalism, and the Schools of Education and Social Policy, Music, and Speech require 16 units, divided among the following academic areas:

- English: 4 units
- Foreign language: 2 to 4 units
- Mathematics: 3 to 4 units
- Laboratory science: 2 to 3 units
- History/social studies: 2 to 4 units
- Electives: 1 to 3 units in the above academic areas

Students preparing for college are strongly advised to take four years of work in English with as much emphasis on composition as the curriculum allows. Two units of the same foreign language should be taken; three or four years are strongly recommended.

The McCormick School of Engineering and Applied Science requires a sound secondary school education as described above, with strong preparation in mathematics and science. Specifically recommended are

- Mathematics: 3<sup>1</sup>/<sub>2</sub> to 4 units (the minimum requirements for mathematics include algebra [2 units], plane geometry [1 unit], and trigonometry [<sup>1</sup>/<sub>2</sub> unit]; many entering McCormick freshmen will have taken calculus [1 unit].)
- Science: 2 units (credit in both chemistry and physics is recommended)

Credit in other subjects should bring the total to 16 units or more, which include 4 units of English and work in social studies and foreign languages.

### Admission Notification

Northwestern offers freshman candidates a choice of two notification plans, Early Decision and Regular Decision. Early Decision is a binding admission commitment. Candidates accepted to Northwestern under Early Decision must withdraw all other university applications. Unlike other selective schools, Northwestern does not defer Early Decision applicants into its Regular Decision pool.

The accompanying table outlines these plans, the notification plans for transfer students, and the financial aid application procedure, including deadlines and the forms available through the College Scholarship Service.

### Admission Procedure

To be considered for admission to Northwestern, candidates must complete the following three steps:

- File a completed application form. This may be obtained from the Office of Undergraduate Admission, Northwestern University, 1801 Hinman Avenue, P.O. Box 3060, Evanston, Illinois 60204-3060. The application may also be downloaded or completed online at www.ugadm.northwestern.edu. Applications for admission may be submitted before candidates take the standardized tests required for college admission.
- Arrange with the officials of their high school to complete and forward the Secondary School Report to the Office of Undergraduate Admission. All candidates should have their records through the sixth semester sent to Northwestern as early in the senior year as possible. Regular Decision candidates should have seventh-semester grades sent as soon as they are available.
- Take standardized tests. The official results of the SAT I or the ACT are required for all students applying for admission to Northwestern as freshmen. In addition, all the special programs require each matriculant to present three SAT IIs as specified in the accompanying table. Home-schooled applicants are also required to submit three SAT II results. SAT IIs are recommended for all candidates.
- If applying for admission to the School of Music, present a music audition in person or a taped recording. (Audition guidelines will be furnished on request.)

### Application and Testing Deadlines: Notification Plans

### **Regular Programs for Fall Quarter Matriculation**

Freshman candidates for other quarters should request information from the Office of Undergraduate Admission.

	Early Decision	<b>Regular Decision</b>
Apply by	November 1	January 1
Take tests by (SAT I or ACT required; 3 SAT IIs recommended)	October test	December test
To apply for financial aid, file CSS Profile by and file FAFSA by	December 1 February 1	February 1 February 1
Northwestern mails decision letter by	December 15	April 15
Reply by	February 1	May 1

### Honors Program in Medical Education

	Regular Decision
HPME preapplication deadline	December 1
HPME application deadline	January 1
Freshman application to Northwestern by	January 1
Take tests by (SAT I or ACT required; 3 SAT IIs required; see page 13)	December test
To apply for financial aid, file FAFSA and CSS Profile by	February 1
Northwestern mails decision letter by	April 15
Reply by	May 1

### Transfer Students for Any Quarter of Matriculation

	Fall	Winter	Spring	Summer

Northwestern mails decision letter as soon as possible after the application deadline; a reply is due within three weeks.

\*Foreign transfer students for fall quarter should apply by May 1.

### **Advanced Placement**

In nearly all areas Northwestern awards credit for Advanced Placement Examination scores of 4 and 5; in some cases credit is also awarded for scores of 3. Specific questions concerning Northwestern's advanced placement policies should be addressed to Weinberg College Office of Studies. In some fields, primarily in mathematics, the sciences, and foreign languages, advanced placement and/or credit can be earned through appropriate performance on examinations administered by Northwestern departments.

Northwestern awards credit for distinguished performance on the British General Certificate of Education (A-Level) Examinations, the higher-level examinations of the International Baccalaureate, and certain other foreign university entrance examinations.

Northwestern also recognizes college credits earned by students before entering the University as freshmen. To qualify for such recognition, the courses must be similar to courses offered at Northwestern, must have been taken at a college or university whose accreditation is recognized by Northwestern, must not have been submitted in partial fulfillment of the normal secondary school graduation requirement, and must have been given on the campus of a college or university and taken primarily by bona fide college students (i.e., high school graduates pursuing a college degree). If candidates have taken college courses that do not qualify for credit under these conditions, they should take Advanced Placement Examinations in the appropriate subjects.

### **Transfer Candidates**

Students may be considered for admission as transfers from another college or university provided they have completed one full year of university studies by the application deadline, are in good standing at their postsecondary institution, and have maintained at least a B average in rigorous academic courses. If students have been enrolled full-time at any institution except Northwestern, they cannot be considered for freshman admission and must meet the stated criteria to apply as a transfer candidate. Some undergraduate schools at Northwestern enroll transfer students in the fall quarter only. Transfer students must complete at least the last 23 quarter-courses and six full-time quarters in residence at Northwestern to be eligible for a bachelor's degree.

### Admission Procedure

To be considered for admission, transfer students must complete the following steps:

- File a completed application form available from the Office of Undergraduate Admission, Northwestern University, 1801 Hinman Avenue, P.O. Box 3060, Evanston, Illinois 60204-3060. Download the application or apply online at www.ugadm.northwestern.edu.
- Arrange with the officials of the high school to forward the complete high school report to the Office of Undergraduate Admission.
- Submit the results of the Scholastic Assessment Test (SAT I) or the American College Test (ACT).
- Arrange with the registrar of each college previously attended to forward transcripts of record to the Office of Undergraduate Admission.
- Request a statement of good academic and social standing from the dean of students at the college from which the student is transferring.
- Present a music audition (in person or a taped recording) if applying for admission to the School of Music (audition guidelines will be furnished on request).
- Submit application for admission before the deadline of June 1 (for admission in the fall quarter), November 1 (winter), February 1 (spring), or May 1 (summer).

### **Evaluation of Credits**

Transfer candidates who are accepted by Northwestern will receive a preliminary evaluation of the credits they have earned to date before matriculation, assuming all pertinent transcripts have been received. An official evaluation of credits earned will be made by the Registrar's Office when an admitted student matriculates.

### Foreign Students

In addition to meeting all regular admission requirements, foreign students are required to present evidence of their ability to speak, read, and write the English language and to meet the financial obligations associated with their study at Northwestern. Students for whom English is a second language must present the results of the Test of English as a Foreign Language (TOEFL). Foreign students must have achieved outstanding school records to be considered for admission. Foreign transfer candidates may apply for fall quarter admission only and must submit their completed applications by May 1.

### **Returning Adult Students**

Adults who interrupt their education following high school or during college and, after several years, decide to complete their undergraduate education are considered by the Office of Undergraduate Admission as "returning adult students." Ordinarily, returning adult students have been out of high school for seven years or more. Depending on the amount of college credit previously earned, returning adult students apply as freshman or transfer candidates.

### **Evening Students**

The School of Continuing Studies (SCS), Northwestern's continuing education division, offers courses in the evenings and on Saturdays for adult students seeking personal enrichment or professional mobility, preparation for graduate study, or pursuit of a degree or a certificate. Semester-long courses are offered on the Chicago and the Evanston campus.

SCS allows adults with a college degree, or some college credit and good standing, or a high school diploma but no prior college work, to enroll in courses as students at large. Students who wish to earn a degree or a certificate should speak with an academic adviser about admission.

### **Special Students**

Properly qualified persons who demonstrate a need for certain courses required for their academic or professional advancement may apply to the University as special nondegree-seeking students. Applicants must present official transcripts of previous study and show evidence of successful academic achievement. *Persons* who do not meet these requirements should not apply.

Enrollment as a special student does not constitute admission to any degree program at the University, and credits earned as a special student may not be counted toward a degree at Northwestern. (Exception: Special students who subsequently become eligible for admission into the School of Continuing Studies may apply these credits toward a degree.) Special students are granted academic credit for course work satisfactorily completed, and these credits may be transferred to another institution.

Special students are admitted with the understanding that they may register only after students working toward Northwestern degrees have registered. Some classes will be closed, and some schools or departments may not accept nondegree students. These restrictions do not apply to Summer Session.

Special students are not permitted to enroll in 399 or 599 Independent Study courses.

All tuition and fees for special students are charged at the undergraduate rate. Complete instructions and application forms may be obtained from the Office of Special Students, 162 Walter Annenberg Hall, Northwestern University, Evanston, Illinois 60208-2650.

### Auditors

Auditors, who are charged a special tuition rate, are persons who enroll in a course to observe or listen only. They are not permitted to engage in class discussion, submit written or oral assignments, or take examinations, and they do not receive academic credit.

Only students who qualify as special students or are taking School of Continuing Studies classes are permitted to formally audit classes. Special students must consult with the Office of Special Students; SCS students must consult an adviser or the SCS bulletin. Formal auditor status and registration are not normally available to regularly enrolled Northwestern students in daytime courses.

### **Financial Aid**

The University awards financial aid on the basis of need as determined by the financial circumstances of the family. Aid may be a loan, part-time employment, a grant, or a combination of these. Recipients may accept all or any part of the aid offered. The amount of an award is confidential between the University and the family of the student. For entering freshmen, financial aid is generally renewable for up to 12 quarters of enrollment, even if they are not offered financial aid for those quarters. For transfer students, the maximum number of quarters of assistance depends on the number of quarters of transfer credit accepted, as determined by the Registrar's Office (i.e., a student who transfers with 3 quarters of acceptable credit is eligible for 9 quarters of assistance). The amount of financial aid may change based on the family's financial circumstances. Students must reapply each year and maintain the requirements established by the Financial Aid Committee of the University.

During the 2000–01 academic year, undergraduate students at Northwestern received more than \$52.4 million in grant assistance: \$42 million from Northwestern, \$6.5 million from federal and state governments, and \$4.3 million from outside sources. The average Northwestern grant for the 3,250 students receiving aid was \$12,927. In addition, \$15 million in loan assistance and 3,000 campus jobs were available.

Assistance that is not need-based is provided by the Reserve Officers Training Corps (see Military Studies) and from other sources discussed in the Northwestern publication "Invest in Your Future: Affording a Northwestern Education," distributed by the Office of Undergraduate Admission (see For More Information).

### Who Should Apply

Any undergraduate students who believe they cannot afford the full cost of a Northwestern education may apply for financial aid.

Students graduating from community colleges and transfer students from four-year colleges may apply for financial assistance. However, since funding is limited, full funding may not be available for the first year of study. Transfer students must obtain transfer financial aid application materials from the Office of Undergraduate Admission.

#### **Application Procedure**

Applicants request consideration for financial aid when submitting an Application for Admission. The Financial Aid Committee cannot make a decision until the University has admitted the applicant. Candidates should do the following:

- Complete and submit the Application for Admission, which provides a place to request financial aid.
- File the Free Application for Federal Student Aid (FAFSA) and the Financial Aid Profile of the College Scholarship Service (CSS) and request that copies of both reports be sent to Northwestern (the forms are available at local high schools).
- File the applications as soon as the need for assistance is realized by the family but not later than the dates indicated in the table titled Application and Testing Deadlines: Notification Plans (page 15).

### Satisfactory Academic Progress

To comply with regulations for the disbursement of federal student assistance funds, Northwestern students are considered to be maintaining "satisfactory academic progress" if they (1) complete an average of nine units of academic credit per year and (2) complete their educational programs within 18 quarters of enrollment (22 quarters for specific five-year programs). Federal law specifies that by the end of the second academic year (measured as a period of time) students must have a C average or its equivalent, or "an academic standing consistent with the requirement for graduation from the program," if federal aid is to continue. These policies are supplemented by the qualitative requirements established by the undergraduate schools (see the respective school section in this catalog).

If students fail to maintain satisfactory academic progress as defined above, they may be awarded assistance for one additional payment period to reestablish "satisfactory" standing. Students who successfully complete a minimum full-time course load during this period will be considered to be again making satisfactory academic progress. Failure to successfully complete a minimum full-time course load during this period results in ineligibility for additional assistance until a minimum full-time course load is successfully completed at Northwestern for one payment period. Within two weeks of their notification of ineligibility, students may submit a written appeal to the Office of Financial Aid presenting evidence of unusual circumstances. The appeal is reviewed to determine if an exception to this policy is justified.

The above procedure will be followed except in these cases:

• When students are academically dismissed from the University according to the policies of their particular school and program. Such students will be eligible for federal financial assistance during the first quarter of full-time study on returning to Northwestern to reestablish satisfactory academic progress. On successful completion of a minimum full-time course load with a 2.0 grade point average, they will again be considered to be making satisfactory academic progress and will be eligible for federal and institutional financial assistance in subsequent quarters.

• When students have been in attendance at Northwestern for 12 quarters or the equivalent. Unless the course of study normally requires more than 12 quarters of enrollment, students are ineligible for financial assistance from University funds beyond the 12th quarter, even if they are maintaining satisfactory academic progress. However, students admitted to the five-year BA/BMus, BS/BAMus, and BS/BMus programs will be eligible for University funds for up to 15 quarters of enrollment. The Committee on Financial Aid to Students may decide to continue aid when unusual circumstances exist and students demonstrate academic promise.

### **Financial Regulations**

### **Tuition and Fees**

The cost of education at Northwestern is only partly covered by tuition charges. The balance is met by the income from invested funds and by the gifts of alumni and other supporters of the University.

Tuition and fees for 2001–02 are listed below. Rates are subject to change without notice, and increases should be expected in subsequent years. For tuition purposes, the term *course* refers to course credit. Some course offerings carry more than one course credit.

### Undergraduate Tuition

All undergraduate students in degree programs must conform to the Undergraduate Residence Requirement. Tuition: each quarter

Enrollment prior to fall 1998	\$7,788
Enrollment fall 1998 and later	\$8,613

### Undergraduate Tuition: Exceptions

These rates apply only to special students, part-time students, and other students not subject to the Undergraduate Residence Requirement. Full time: each quarter Enrollment prior to fall 1998 \$7,788

Enrollment fall 1998 and later \$8,613 Full-time registration in Weinberg, Education and Social Policy, Medill, Music, and Speech is three or four courses; in McCormick, it is three to five courses. Excess courses in McCormick means more than five courses; in all other schools, more than four courses. Excess courses: each course

Enrollment prior to fall 1998	\$2,771
Enrollment fall 1998 and later	\$3,066

Part-time: each course, each quarter	
Enrollment prior to fall 1998	\$2,771
Enrollment fall 1998 and later	\$3,066
Auditor's fee: each course, each quarter	
Prior to fall 1998	\$2,151
After fall 1998	\$2,379
Performance study, each quarter:	
Private instruction, nonmajors	\$120
Service Fees	
Student Hospitalization Plan	\$889
Required for all students unless they have	
equivalent hospitalization coverage.	
Study abroad administrative fee (not refundable	e)
Non-Northwestern summer study abroad	\$550
Term fee (semester or quarter)	\$1,640
Annual fee (academic or calendar year)	\$2,730
Tuition deposit fee	\$200
Required for each new undergraduate	
student; applied on the first tuition bill	
and not refundable.	
Application fee (not refundable)	\$55
Returned check service fee	\$35
Replacement WildCARD fee	\$15
Transcript fee	\$3
Makeup laboratory time, breakage fee	varies
Other Fees	
Late registration fee	\$25
If fee is billed	\$30
For registering at other than the scheduled	times.
Retroactive registration fee	\$225
For registering for a term after the last day	of
classes for that term.	
Housing deposit fee	\$200
Late payment penalty fee	\$100
For late payment of bills.	
Associated Student Government	\$33
Activity fee, each quarter.	
Dependent Hospitalization Plan, each person	

 Spouse/partner
 \$2,604

 Child
 \$2,597

 Field trip fee
 varies

 For courses in which field trips are required to earn credit.

### **Bills and Payments**

The Office of Student Accounts issues student bills. A due date is shown on each University bill, and payment must be received by that date. Failure to receive bills is not sufficient cause to extend due dates.

### **Installment Payment Plan**

The University provides a tuition and fee installment payment plan, 9PAY, which offers the benefit of dividing the educational costs for the academic year into nine monthly payments. For information, contact the Office of Student Accounts, Northwestern University, 619 Clark Street, Evanston, Illinois 60208-1132, phone 847/491-5224, fax 847/467-2451.

### Withdrawal from the University: Refunds

Students who withdraw from the University must immediately file a withdrawal form, available at the Registrar's Office, Rebecca Crown Center. The completed form, bearing the required signatures, must be filed at the Registrar's Office.

The Office of Student Accounts considers the date the completed form is received at the Registrar's Office as the effective date in making financial adjustments.

Tuition deposits are not refundable under any circumstances. Tuition, less the tuition deposit, and refundable fees are refundable depending on the percentage of time the student was enrolled in the quarter. The following policy applies to withdrawals:

- When or before the first 10 percent of the quarter has elapsed, 100 percent of the tuition (less the deposit) is refunded.
- After 10 percent but not more than 25 percent of the quarter has elapsed, 75 percent of the tuition is refunded.
- After 25 percent but not more than 50 percent of the quarter has elapsed, 50 percent of the tuition is refunded.
- After 50 percent of the quarter has elapsed, no refunds are given.

Residence and meal contracts are signed for the full school year. Students who leave a residence before the end of the year are liable for the entire year's rent or for charges up to the date another student takes the vacated space in University housing. Meal charges are assessed until the end of the week in which withdrawal is in effect. Adjustments may be made at the discretion of the Housing Office for students who for financial reasons must make room and board arrangements other than those for which they first contracted.

Financial aid recipients who withdraw from the University may be required to return a portion of their Title IV funds to the federal programs as well as some of their state assistance, outside scholarships, and/or institutional financial aid. Three different calculations — the Institutional Refund, Return of Title IV Funds, and Return of Non-Title IV Funds are used to determine such repayments. Students may request samples of the applications of these refund policies from the Office of Student Accounts or the Office of Financial Aid.

### **Changes of Registration**

No refund or bill reduction is made on any course dropped after the fifth day of classes in the quarter.

### **Financial Obligations**

Students whose University bills are overdue may not be given an academic transcript until all financial obligations are paid in full. Students whose accounts are overdue must pay a late payment penalty fee of \$100. The director of student accounts may cancel or prevent the registration of a student whose bills are past due.

Each student is liable for any costs associated with the collection of his or her past-due account, including but not limited to collection agency costs, court costs, and legal fees.

### Supplemental Enrollment Benefit

Students who are unable to complete bachelor's degree requirements in 12 quarters due to circumstances beyond their control, and who have paid full-time tuition to Northwestern for 12 quarters, may petition the Residence Requirement Appeals Committee to enroll in their final quarter at no additional tuition charge. Transfer students who have paid full-time tuition to Northwestern for 9 quarters are also eligible.

A final quarter at no tuition charge is not available for students who choose a program that may take more than 12 quarters to complete or for students who have graduated. A final quarter at no charge is also not available for students who choose an optional program, such as study abroad, a double degree, double major, minor, or extra course work beyond that normally required for the degree. For further information about this process, contact the Registrar's Office.

21

### **Undergraduate Residence Requirement**

The Undergraduate Residence Requirement (URR) replaces the Undergraduate Enrollment Requirement as of September 1, 2001. The URR is predicated on the principle that when a student receives a bachelor's and certainly the most advanced portion - of his or her academic work is completed on a Northwestern campus as a full-time student under the instruction of Northwestern faculty during the regular academic year. Thus, being "in residence" for a quarter means that the student is enrolled during the fall, winter, or spring quarter at Northwestern, is being taught by or is under the supervision of Northwestern faculty, and completes three or more credits. It includes, for instance, Practicum in the School of Education and Social Policy and Teaching Media in the Medill School of Journalism. It does not include study abroad of any type or co-op in the McCormick School.

The URR applies only to undergraduate students seeking a bachelor's degree. Its provisions are

- A student entering as a freshman is required to be in residence for 12 quarters in a four-year degree program and 15 quarters in a combined degree program (or two bachelor's degrees) involving two schools.
- A student entering as a freshman may gain exemption from the required residency by up to four quarters through any combination of a maximum of 12 credits earned through the Advanced Placement or the International Baccalaureate programs; a maximum of 12 credits earned through approved study abroad; credits earned through "credit by examination" at Northwestern; credits earned at Northwestern through less than full-time enrollment; and a maximum of four transfer credits from other (domestic) colleges or universities earned at any time prior to the final three quarters of residence. Each four such credits confer one-quarter exemption from the URR.
- A student entering as a transfer student will have his or her residence requirement determined at the time of transfer; in no case will the residence requirement be determined to be less than six quarters and 23 credits. The URR, once established, is not subject to the exemption possibilities listed above.
- A student who completes three or more credits in a single Northwestern Summer Session will gain exemption from one quarter of the URR. A second quarter of exemption may be earned by completing four credits in a second Summer Session.

- A student who receives Northwestern credit for study abroad must be in residence for either the final three quarters before the awarding of the degree or — if approved study abroad occurs in the senior year — in residence for five of the six quarters before the awarding of the degree.
- A student who takes more than four credits in one quarter will be subject to an overload charge if these credits are used to accelerate graduation. (Acceleration occurs when the total quarters completed by the student, including those allowed in the second and the fourth exemption provisions above, at graduation total less than 12 for a single-degree program or 15 for two bachelor's degree programs involving two schools.)
- Students may appeal for URR variances to the Residence Requirement Appeals Committee, which consists of the associate provost of University enrollment, the associate provost for undergraduate education, the University registrar, and two associate deans from different undergraduate schools. The deans serve three-year terms on a rotating basis.

For additional information, interpretation, or application of the URR, contact the Registrar's Office, 633 Clark Street, Evanston, Illinois 60208-1118, 847/491-5234.

### **Returning Students**

Students who withdraw from the University and wish to return must submit a Returning Student Application Form to the Registrar's Office six weeks before the desired date of reentry. Students who want credit for course work taken at another institution must submit an official transcript to the Registrar's Office. The Registrar's Office will determine the extent to which credit earned away from Northwestern may reduce the four-year URR.

### **Transfer Students**

Students who transfer to Northwestern from another institution will be informed of the extent to which their previous work reduces the 12-quarter Undergraduate Residence Requirement. All transfer students have a six-quarter minimum URR. Those entering as transfer students from another institution may not apply any additional work taken outside the University toward the URR. Such courses beyond the maximum may be useful in meeting academic requirements but may not be used toward the URR.

### **Academic Regulations**

### **Registration for All Students**

- Instructions for registration are contained in the *Class Schedule* issued each quarter or online at www.registrar.northwestern.edu. Failure to read the *Class Schedule* does not excuse students from compliance with the information and regulations stated therein.
- The dates of registration for each quarter are announced in advance, and students not registered by the end of the period are subject to a fee for late registration. This fee is not intended as a penalty but is assessed to partly cover the cost of registration at other than the scheduled time. Inconvenience, illness, and other personal reasons for registering late are not accepted as reasons for waiving the fee. Late registration is permitted only through the fifth full day (Saturday is not a full day) of classes in any quarter.
- Credit is not given for work in a course in which a student is not properly registered.
- Any course duplicated for credit increases the required number of credits to graduate by an equal amount. Both the original and the duplicated course entries remain on the student's permanent record and are used to calculate the cumulative grade point average.
- Credit is not given for a course that is a prerequisite for a more advanced course if that prerequisite is taken after the more advanced course has been completed. Waiver of prerequisites for admission to courses may be obtained from the instructor concerned or the chair of the department in which the course is offered.
- Undergraduate students may not enroll in less than three quarter-courses except by permission of the dean of their school. Permission is given only in extraordinary circumstances.
- In Weinberg College and the Medill School of Journalism, undergraduate students may not enroll for more than four quarter-courses except by permission of the dean's office. This regulation applies to total credit for courses taken in other institutions in addition to credit obtained in residence at Northwestern. Additional tuition may be charged for excess registration (see Undergraduate Residence Requirement).

### **Changes of Registration**

Changes in registration in fall, winter, and spring quarters are subject to the following provisions:

- In no case may a course be added after the fifth day of classes. No course may be dropped after the sixth Friday of classes.
- Undergraduate students may change registrations from grade to the pass/no credit (P/N) option or vice versa through the third Friday of the quarter. Check regulations of the individual schools for specific information on the P/N option.
- To add an undergraduate course offered in Weinberg College, the School of Education, the Medill School of Journalism, or the School of Speech, students must obtain a permission number from the instructor or department representative for each course added. The permission number must be entered during registration through CAESAR, the student Web gateway (www.registrar.northwestern.edu /caesar). Undergraduate courses offered through the McCormick School and the School of Music do not require permission numbers during the change of registration period.
- To drop a course, students must log in to CAESAR and drop the course from the record. No special consent is required.
- Changes in ungraded sections (laboratory or discussion) are made in the departments and do not require notifying the registrar.
- A course dropped by the sixth Friday of a quarter does not appear on the permanent academic record, and no grade is recorded.
- Failure to drop a course within the time allowed is regarded as a failure and is recorded with a grade of F. (See also Withdrawal from the University:

Refunds and Change of Registration under Financial Regulations.)

### **Identification Cards**

The University identification card (WildCARD) identifies registered students and should be carried at all times. The WildCARD is the property of the University and is not transferable; its privileges may be canceled at any time the card is misused. Students are required to surrender their WildCARD to University officials upon request.

The student's ID number is encoded on the card and indicates whether the student is currently registered and if the card is valid. The card identifies the holder for admission to the library during hours of limited access and is needed at all times to borrow books. If a student has a meal plan, the WildCARD admits the student to residence hall dining facilities. It also identifies the holder at the Health Service, Norris University Center, student functions and elections, and University athletic events.

Lost or stolen cards should be reported to the WildCARD office, where replacement cards are issued. For the cost of replacing an ID card, see Service Fees under Tuition and Fees earlier in this section of the catalog.

### **Registration in the School of Continuing Studies**

The School of Continuing Studies, with facilities on both the Chicago and Evanston campuses and now in a new Chicago Loop location, operates on the semester system. Students enrolled in an undergraduate school may take courses in the School of Continuing Studies only with the approval of the office of the dean of their school and only when the courses are not given on the quarter system during the day or when there are clear cases of conflict. Such work is counted as a regular part of a student's registration.

Students enrolled in undergraduate schools are not guaranteed a place in SCS courses.

To register for SCS courses, students must

- Pick up a Dual Registration Form from the Registrar's Office in Evanston
- Secure approval from the office of the dean of their school
- Turn in the form at the Registrar's Office in Evanston before the first meeting of the class

Fall semester courses are included as part of fall quarter registration; spring semester courses are included as part of spring quarter registration.

To drop an SCS course, students must pick up a Dual Registration Form from the Registrar's Office, secure approval from the office of their dean, and return the form to the Registrar's Office.

### Interschool Transfers

Undergraduate students who wish to transfer from one school or college of the University to another must have an interschool transfer approved by the dean's office of each school. A return to the original school must be approved in the same way. Approval of an interschool transfer is usually contingent on satisfactory performance in the original school. Consult the *Class Schedule* for appropriate dates to process an application for interschool transfer.

### **Cancellation of Registration**

Students who complete advance registration for a quarter and later decide not to attend classes that quarter must notify the Registrar's Office in writing before the first day of classes of the quarter to avoid being charged the applicable tuition and fees.

### Withdrawal from the University

Students who wish to withdraw from the University after registering for classes in any quarter must file a withdrawal form (available at the Registrar's Office). The withdrawal takes effect the day the completed form, bearing the required signatures, is received at the Registrar's Office. Students who have taken the final exam may not withdraw and must take the grade they earned. (See also Withdrawal from the University: Refunds under Financial Regulations.)

### **Readmission to the University**

Undergraduate and graduate students who have not registered for one or more quarters of an academic year must file at the Registrar's Office an application to reenter no later than six weeks before the first day of registration of the quarter in which they plan to return.

Students are not required to file the application to reenter under the following circumstances:

- If they have registered during the spring quarter and intend to return in the fall
- If they have registered in the spring quarter and intend to return during Summer Session of the same year
- If they are students in the Graduate School who have attended the preceding Summer Session and intend to register during the next Summer Session and have not registered during the academic year

Students must obtain advance approval from the dean of their school if they wish to transfer credit for work taken elsewhere during an absence from Northwestern. An official signed and sealed transcript of that work must be furnished to the Registrar's Office before the end of the next quarter in residence at Northwestern, or credit for such work is not allowed.

If a student interrupts a program of study for an extended period of time and if degree requirements are changed during this period, the new requirements normally must be met. Any modification of the requirements is made by the appropriate administrative officers of the school in which the student is registered.

### Work at Other Institutions

After enrolling at Northwestern, students who want to study at other accredited institutions and transfer credit for that work to Northwestern must obtain advance approval of their proposed study. Forms for obtaining such approval are available in the Registrar's Office. The McCormick School Records Office also has forms available for engineering students, and the Medill Office of Student Records and Services has forms available for journalism students. Students in Weinberg College should secure the appropriate Weinberg College forms (and a copy of the regulations governing study away from Northwestern) in the Weinberg College Office of Undergraduate Studies and Advising. Students also should check the regulations for the Undergraduate Residence Requirement.

If students take courses elsewhere during an absence from Northwestern (or during the summer), an official transcript of the work must be on file in the Registrar's Office before the end of the next quarter in residence at Northwestern, or credit for such work is not allowed.

Students may not register concurrently at Northwestern and at another institution and receive transfer credit for work taken at the other institution unless permission is granted in advance by the office of the dean of their school. This applies to evening courses as well as to regular courses in residence.

### **Application for a Degree**

Undergraduates must file a degree application one calendar year before anticipated graduation. Students in Weinberg College, the Medill School of Journalism, and the Schools of Education and Social Policy, Music, and Speech must file their applications with the Registrar's Office. McCormick School students must file with that school's Records Office.

### **Classification of Students**

Students are classified as follows:

- Senior: has completed at least 33 quarter-courses
- Junior: has completed at least 22 but less than 33 quarter-courses (engineering co-op students are considered preseniors when they have completed 32 quarter-courses and seniors when they have completed 40 quarter-courses)

- Sophomore: has completed at least 11 but less than 22 quarter-courses
- Freshman: has completed less than 11 quartercourses
- Graduate student: has a bachelor's degree or equivalent and has been admitted to a graduate program
- Special student: is not working toward a degree at Northwestern but is working for credit
- Auditor: attends classes and listens to lectures but is not eligible to participate in class discussions or exercises and does not receive credit (must have approval of the school and instructor concerned)

All the above except auditors may be either fulltime or part-time:

- Full-time: enrolled in at least three quarter-courses or the equivalent
- Part-time: enrolled in less than three quartercourses or the equivalent

### **Grading Policies**

The following grading system is used in computing the grade point average:

Gr	ade Gra	ide Points
A		4.0
A–		3.7
B+		3.3
В		3.0
B–		2.7
C+		2.3
С		2.0
C-		1.7
D		1.0
F		0
X	Failed to earn credit: missed final examination	on 0
Y	Failed to earn credit: work incomplete	0

The following notations are ignored in computing the grade point average:

- P Pass with credit
- N No grade, no credit
- K In progress
- S Satisfactory: noncredit course
- U Unsatisfactory: noncredit course
- W Withdrawn by permission
- V Auditor

At the end of a quarter a grade of X or Y will be given only if the instructor believes the student has a reasonable chance of passing the course by taking an examination or turning in the required work, or both. Some undergraduate schools prohibit the posting of X or Y grades without the approval of the dean's office. Students should contact their school for its regulations concerning X and Y grades.

If a grade of X or Y is to be changed and credit established, the deficiencies must be made up before the end of the next quarter in which the student is in residence in any school of Northwestern, or credit is forfeited. A notation of K must be resolved before graduation. An unresolved K will be changed to Y and the grade point average recomputed.

Northwestern University does not rank its students.

### **Class Attendance and Absence**

Students are expected to attend all sessions of the courses for which they are registered. Excessive absence is cause for failure in the course. Some courses require attendance at the first class meeting; students may be dropped for nonattendance (see the *Class Schedule*).

### **Grade Reports**

At the end of fall and winter quarters, a copy of each undergraduate student's grades is sent to the parent or guardian at the parent's address, except as noted below. At the end of spring quarter and Summer Session, the report is sent to the student at his or her permanent address. Notices of deficiencies in scholarship may be reported to the student before the end of a quarter, but the University does not assume the responsibility of issuing such warnings.

The University will supply grade reports to parents of undergraduates under age 24 unless the registrar receives written documentation that the student is not a dependent and was not claimed as an exemption on the previous year's income tax return.

### Transcripts

Students who have satisfied all financial obligations to the University are entitled to an official transcript of their academic record, which they may order from the Registrar's Office. A fee is charged for all transcripts (see Service Fees under Tuition and Fees).

Except for internal educational uses, Northwestern issues official transcripts only upon written authorization of the student concerned. Because of the confidential nature of a student's record, telephone requests for transcripts will not be accepted. Written requests should be submitted to the Registrar's Office.

Requests for transcripts initiated by persons or agencies other than the student or appropriate educational agencies will not be filled until written authorization has been secured from the student. When these requests can be anticipated, students can avoid delay by providing such authorization in advance.

Allow one week for a transcript to be issued at any time except between quarters, when three weeks is necessary.

Details may be found at www.registrar .northwestern.edu.

### Access to Student Records

Under the Family Educational Rights and Privacy Act (FERPA), all students have certain rights with regard to their educational records. A copy of Northwestern's student records policy is available on the Web at www.registrar.northwestern.edu/ferpa.

FERPA grants students the right to

- Inspect and review their educational records at Northwestern University.
- Request an amendment of their records to ensure that the records are not inaccurate, misleading, or otherwise in violation of privacy or other rights.
- Consent to release or to restrict disclosure of personally identifiable information contained in their educational records.
- File a complaint with the U.S. Department of Education concerning alleged failures by Northwestern University to comply with FERPA requirements.

### Academic Integrity

Academic integrity at Northwestern is based on a respect for individual achievement that lies at the heart of academic culture. Every faculty member and student, both graduate and undergraduate, belongs to a community of scholars in which academic integrity is a fundamental commitment.

Students enrolled at Northwestern are expected to adhere to the University's standards of academic integrity. Questions about the acceptability of specific behavior should be addressed to the appropriate faculty member or school dean. The following is a nonexhaustive list of types of behavior that violate the standards of academic integrity:

- Cheating: using unauthorized notes, study aids, or information on an examination; altering a graded work after it has been returned, then submitting the work for regrading; allowing another person to do one's work and submitting that work under one's own name; submitting identical or similar papers for credit in more than one course without prior permission from the course instructors
- Plagiarism: submitting material that in part or whole is not entirely one's own work without attributing those same portions to their correct source (material discussing the use and acknowledgment of sources is available in the Office of the Provost)
- Fabrication: falsifying or inventing any information, data, or citation; presenting data that were not gathered in accordance with standard guidelines defining the appropriate methods for collecting or generating data and failing to include an accurate account of the method by which the data were gathered or collected
- Obtaining an unfair advantage: stealing, reproducing, circulating, or otherwise gaining access to examination materials prior to the time authorized by the instructor; stealing, destroying, defacing, or concealing library materials with the purpose of depriving others of their use; unauthorized collaborating on an academic assignment; retaining, possessing, using, or circulating previously given examination materials, where those materials clearly indicate that they are to be returned to the instructor at the conclusion of the examination; intentionally obstructing or interfering with another student's academic work; otherwise undertaking activity with the purpose of creating or obtaining an unfair academic advantage over other students' academic work
- Aiding and abetting dishonesty: providing material, information, or other assistance to another person with knowledge that such aid could be used in any of the violations stated above; providing false information in connection with any inquiry regarding academic integrity
- Falsification of records and official documents: altering documents affecting academic records; forging signatures of authorization or falsifying information on an official academic document, grade report, letter of permission, petition, drop/add form, ID card, or any other official University document

 Unauthorized access to computerized academic or administrative records or systems: viewing or altering computer records; modifying computer programs or systems; releasing or dispensing information gained via unauthorized access; interfering with the use or availability of computer systems or information

It is the responsibility of every member of the academic community to be familiar with the specific policies of his or her own school. Students who violate these policies are subject to penalties, including course failure and exclusion from the University. Students charged with academic dishonesty may not change their registration in a course in which the charge is pending or in which a finding of academic dishonesty has been made. Information on procedures that will be followed in cases of alleged dishonesty may be obtained from the dean's office of each school. A complete statement of the University's principles regarding academic integrity may be obtained from the Office of the Provost.

The student-faculty Undergraduate Academic Conduct Committee works to maintain a high level of academic integrity at Northwestern; on the request of the provost, that committee also hears appeals from students of school decisions concerning academic dishonesty. Such appeals must be in writing and include a detailed statement setting forth the grounds for the appeal. Appeals to the provost are limited to alleged errors in procedures, interpretation of regulations, or the question of whether a finding or sanction appears manifestly contrary to the evidence. The provost will receive appeals only after a sanction has been specified for the alleged violation; an appeal to the provost may concern the finding and/or the proposed sanction.

### **Regular Examinations**

Regular course examinations are held during the last week of each quarter. Summer Session examinations are held at the times indicated in the quarterly *Class Schedule*. Students are responsible for determining the time and location of each examination. Early examinations are not permitted. Permission to be absent from the final examination is given by the instructor and the dean only for cause beyond the student's control. Normally such permission must be secured in advance of the date of the examination. Any deficiency must be made up before the end of the next quarter in which the student is in residence in any school of Northwestern, or credit is forfeited. In no case may such a grade be made up after a lapse of one year.

### **Makeup Examinations**

All undergraduate students in residence in any school of Northwestern University must make up grades of X (absent) and Y (incomplete) before the end of the next quarter, or credit is forfeited. Students not in residence may apply for a makeup examination. All such grades, however, must be made up within one year after the course was taken, or credit is forfeited. Permission to take a makeup examination to remove a grade of X must have the written approval of the instructor and the dean. Makeup examinations are conducted by the departments concerned early in each quarter. An application for a makeup examination must be filed several weeks in advance at the office of the school in which the course is offered. (See the *Class Schedule* for exact dates the applications are due.)

### Academic Standing

The decision concerning the academic standing of a student is the responsibility of the faculty of the school in which the student is registered.

Academic probation constitutes notice of unsatisfactory academic performance; it is a warning that minimum standards for graduation are not being met. Unless a student demonstrates significant scholastic improvement during the period of probation and thereby indicates ability to fulfill degree requirements within a reasonable period of time, the student may be dismissed from the University. A student will be notified in writing no later than the middle of a term that, because of unsatisfactory work in a previous term or terms, he or she will be excluded in the event of unsatisfactory work during the term for which the notice is issued.

### Academic Probation

The following are ordinarily placed on academic probation:

- Students who have received final grades below C in two or more courses in any quarter or Summer Session
- Sophomores, juniors, or seniors who have a cumulative academic record below a C average on all work attempted at Northwestern University

- Students who have failed to complete at least three quarter-courses or the equivalent in each of two consecutive quarters
- Students who, on account of dropped courses, failure, or uncompleted courses, have failed to earn credit for an average of three quarter-courses per quarter after six quarters of residence
- Students who have failed to maintain a C average in the major or a professional field of study

The faculty of each school may impose such additional conditions of academic probation as they may deem appropriate.

### **Removal from Academic Probation**

Students on academic probation are ordinarily removed from probation if the deficiencies that resulted in probation have been remedied during the next succeeding quarter in residence. Students are rarely removed from probation on the basis of a program consisting of less than four courses graded on a basis other than the pass/no credit option.

If students on probation who receive grades of X or Y are not dismissed, probation continues until they have completed all courses or until the end of the next quarter in residence, when the students' records are again subject to scrutiny.

In no case are students removed from probation at the end of a quarter in which they have failed any course.

### **Academic Dismissal**

The following is a partial list of categories of students who may be dismissed for academic deficiencies (in every case the decision is determined in part by the student's cumulative academic record):

- Students on academic probation whose academic records have not improved significantly during the period of probation (which will not normally exceed two consecutive quarters)
- Students not on academic probation who fail in half the work in any quarter or Summer Session
- Students who demonstrate flagrant neglect of academic work at any time
- Students who do not make satisfactory progress toward completion of degree requirements

As a matter of general policy, the probation period for a freshman may be extended to the third quarter of residence if such extension appears to be in the best interests of the student and the University. Such consideration is not granted to a freshman whose record clearly discloses lack of aptitude or flagrant neglect of work.

### **Disciplinary Dismissal**

Students suspended from Northwestern by the University Hearing and Appeals Board and the Sexual Assault Hearing and Appeals System may not receive Northwestern credit for academic work at any other institution during the period of suspension.

### Academic Advising

Academic advising is an essential component of an undergraduate education. All freshmen are assigned an academic adviser through their school. Upperclass students may obtain academic advice through their major department, from the dean's office of their school, and — for issues that transcend school boundaries through the University-wide Academic Advising Center. For specialized academic advice — such as study abroad or preparation for medical or law school consult the appropriate sources listed in the index.

### Honors and Prizes

### **Academic Honors**

Degrees with honors are awarded to the top 16 percent of the graduating class of each undergraduate school, as determined by grades in all work at Northwestern University. Students in the highest 3 percent of the class are awarded degrees summa cum laude; those in the next 5 percent, magna cum laude; and those in the next 8 percent, cum laude.

Departmental honors may be granted to graduating seniors who have done outstanding work in a department in connection with a research project or work of an integrative nature. Students are nominated for these honors by their departments. The faculty of the school concerned makes the final awards.

### Prizes

Prizes established through gifts and endowments are awarded to undergraduate students at Northwestern. Some are all-University prizes, and others are available only to students registered in the school, department, or program that administers the awards.

#### **Honorary Organizations**

Students who qualify by reason of superior scholarship or outstanding achievement are eligible for membership in certain honorary societies. New members of the following organizations are announced in the annual Commencement program:

- Arts and Sciences: Phi Beta Kappa
- Engineering: Eta Kappa Nu, Kappa Theta Epsilon, Omega Chi Epsilon, Tau Beta Pi
- Journalism: Kappa Tau Alpha
- Music: Pi Kappa Lambda

Other honorary organizations in various fields include Alpha Kappa Delta, Alpha Lambda Delta, Deru, Mortar Board, Norleggama, Orchesis, Phi Delta Kappa, Phi Eta Sigma, Pi Mu Epsilon, Sextant, and Shi-Ai. Additional professional and technical societies represented at Northwestern are identified in the *Student Handbook*.

### Academic Options

For more detailed information about the following programs, see other sections of this catalog.

### Accelerated Degree Programs

### Honors Program in Medical Education

The Honors Program in Medical Education (HPME) provides an opportunity for highly talented high school seniors to be admitted to an undergraduate program and to the Medical School and to complete their formal premedical and medical studies in seven years. Applicants should be able to qualify for advanced placement in chemistry, mathematics, and one of the humanities on the basis of superior achievement in high school. Each year about 50 freshmen are admitted to the program and to Weinberg College, the McCormick School of Engineering and Applied Science, or the School of Speech. Only candidates applying directly from high school are considered.

The first three years of the program are spent on the Evanston campus in Weinberg College, the McCormick School, or the School of Speech, and the last four years at the Medical School on the Chicago campus. HPME students must complete 36 courses that meet the HPME requirements in one of the three undergraduate schools mentioned. They also are responsible for an Undergraduate Residence Requirement of nine full-time quarters. Only courses taken at Northwestern or approved study abroad may be used to satisfy this enrollment policy.

During the first two years in Weinberg College, students take required courses in chemistry, physics, and the biological sciences. In addition, they take elective courses in the humanities, social sciences, and arts. The third year is usually devoted to advanced course work in the major. This may be done by studying abroad in a Northwestern-affiliated program or by completing the requirements for a BA degree in Weinberg College. Students may also take an additional undergraduate year at Northwestern or elsewhere.

Students in the McCormick School spend three years pursuing an in-depth education in mathematics, the sciences, and engineering while taking core courses in biomedical engineering. To supplement their technical courses, students also take courses in the humanities and the social sciences.

Speech students spend three years in the Department of Communication Sciences and Disorders, studying the anatomy and physiology of hearing, speech, and the central nervous system as it relates to cognition and memory. They have opportunities to learn how people of all ages hear, speak, and learn — both normally and in the presence of disabling conditions. They also take courses in chemistry, physics, the biological sciences, the social sciences, and the humanities.

After completing the first three years HPME students move to the Chicago campus as members of the first-year Medical School class, which includes students who have completed the traditional four years of premedical education. After successfully completing their first year at the Medical School, Weinberg College students who have not received a BA degree qualify for a bachelor of science in medicine, and School of Speech students qualify for a bachelor of science in speech. After the second year of medical school McCormick students qualify for a bachelor of science in medical engineering. At the end of seven years HPME students qualify for the doctor of medicine degree from the Medical School.

Students who wish to be considered candidates for the HPME must return the card enclosed in the undergraduate application before December 1, reporting their test scores and requesting an HPME application. If the request is approved, the student must complete the special HPME application, in addition to the regular Application for Admission to Weinberg College, the McCormick School, or the School of Speech, by the appropriate deadlines (see the Application and Testing Deadlines table on page 15).

### Integrated Science Program

Northwestern University offers a highly selective undergraduate program of integrated science studies within Weinberg College. The Integrated Science Program (ISP) is designed for students with superior high school records and strong motivation in science and mathematics. Its special curriculum provides a thorough and rigorous background in the major scientific disciplines and mathematics and offers special research opportunities. ISP can lead to a bachelor's degree in three years or, after a fourth year at Northwestern, to a double major or an advanced degree. Graduates of the program are well prepared for professional and graduate study leading to careers in science, medicine, and business.

Enrollment in ISP is limited to ensure small class sizes. Selection is made on the basis of scholastic record, test scores, and recommendations. Background requirements are a year of calculus, a year of chemistry, and a year of physics. To be considered for ISP at the time of their admission to Northwestern, students request the special ISP application and brochure in addition to the regular application from the Office of Undergraduate Admission (see Integrated Science Program in the Weinberg College section of this catalog).

### Four-Year Master's Programs

Combined bachelor's/master's degree programs enable exceptional undergraduates in Weinberg College and the McCormick School to receive both degrees in less than the usual time. The programs are highly demanding intellectually and require early commitment to a discipline and careful planning.

Except in the McCormick School, students receive a double count of nine credits that are applied toward both the bachelor's and the master's degrees.

The following departments and programs in Weinberg College have combined degree programs approved by the Graduate School:

- Anthropology
- Chemistry
- Classics
- Economics
- French
- · Geological sciences
- Linguistics
- · Political science
- Sociology
- Statistics

The approved departmental programs vary, but they share a common goal: the selection and training of exceptional students. The programs also share several underlying premises. First, each department invites students to participate in the program. Students do not select themselves, though they may, of course, inquire about their eligibility. Second, selection by a department is a recommendation to the Graduate School for admission. Students are officially admitted to the Graduate School only after their credentials have been thoroughly reviewed and approved by the dean of the Graduate School.

For these reasons, students should be aware of guidelines used by the dean of the Graduate School and other guidelines affecting the operation of the program:

- No particular grade point average, however high, automatically entitles a student to participate in a combined degree program.
- Only one academic year three quarters or two semesters or less — of transfer credit from another institution may be applied as credit toward the bachelor's portion of the combined degree, including credit for a junior year abroad. Any participating department may impose a more restrictive standard if it desires.
- A combined degree program requires a minimum of 12 full quarters of work. The master's portion must be completed during the final three contiguous quarters of registration, beginning with the fall quarter. In schools or departments of the University that operate on a four-quarter system, that is, that offer a full program during Summer Session staffed by the regular faculty, one Summer Session only may be counted toward fulfillment of the 12-quarter requirement. In schools of the University that do not operate on a four-quarter system, cases of one summer of credit will be considered on an ad hoc basis by petitioning the dean of the Graduate School.
- All requirements, both undergraduate and graduate, must be met by the conclusion of the fourth academic year. The bachelor's and master's degrees are awarded simultaneously.
- Both degrees will appear on a single transcript, as will the results of all work completed for both degrees.
- Continuation of graduate work at Northwestern by those who complete a combined degree program must receive separate approval by the department and the dean of the Graduate School.

#### Accelerated Master's Program in Journalism

Students who exhibit exceptional ability in undergraduate work in the Medill School of Journalism may apply to that school's graduate division for early admission to the graduate editorial program. This program allows students to qualify for bachelor of science in journalism and master of science in journalism degrees in 12 to 14 quarters of full-time study. Students apply for this program during their junior year; however, interested students are encouraged to begin planning for this option early in their undergraduate careers. Information and admissions materials are available from the Medill Office of Graduate Admissions and Financial Aid (see Accelerated Master's Program in the Medill School section of this catalog).

### **Combined Bachelor's Programs**

*Combined Liberal Arts and Engineering Program* Qualified students may undertake a program to earn both a bachelor of arts in a liberal arts discipline from Weinberg College and a bachelor of science in an engineering field from the McCormick School. Students in this BA/BS program, which takes five years, must complete all requirements of both schools as well as the Undergraduate Residence Requirement. To do the necessary planning, interested students should consult with the Weinberg College Office of Undergraduate Studies and Advising and the Undergraduate Engineering Office at the McCormick School as soon as possible after enrolling at Northwestern (see Five-Year BA/BS in the McCormick School section of this catalog).

### Combined Liberal Arts and Music Program

Students accepted into the combined Weinberg College–School of Music program may simultaneously earn a bachelor of arts degree from Weinberg College and a bachelor of music degree from the School of Music. They must complete all Weinberg College degree requirements, including at least 30 Weinberg College courses, as well as all School of Music bachelor of music degree requirements, including at least 30 music courses. Fulfilling both music and Weinberg College requirements takes five years of full-time study, and an Undergraduate Residence Requirement of 15 quarters is obligatory (see Undergraduate Education section of this catalog).

Participants in this combined program must be accepted by both the School of Music and Weinberg
College. Interested students should consult with the associate dean for undergraduate studies in Weinberg College and the director of admissions in the School of Music.

# **Combined Music and Engineering Program**

Students accepted into the combined McCormick– School of Music program may simultaneously earn a bachelor of science degree from the McCormick School and a bachelor of music or bachelor of arts in music degree from the School of Music. They must complete all McCormick School degree requirements, including at least 36 McCormick courses, as well as all School of Music degree requirements, including at least 30 music courses. Fulfilling both music and engineering requirements usually takes five years of full-time study, and an Undergraduate Residence Requirement of 15 quarters is obligatory (see Undergraduate Education).

Participants in this combined program must be accepted by both the School of Music and the McCormick School. Interested students should consult with the Undergraduate Engineering Office in the McCormick School and the director of admissions in the School of Music.

# **Interdisciplinary Study**

# Mathematical Methods in the Social Sciences Program

The Program in Mathematical Methods in the Social Sciences (MMSS) in Weinberg College enables students to combine the study of social sciences with training in formal analytical methods. The program is intended for students with high mathematical aptitude and strong interest in social problems and issues, including policy and research implications.

Admission to the MMSS is very selective; it is limited to entering freshmen and students beginning their sophomore year who have earned superior academic records and demonstrated strong aptitude in mathematics. Prerequisite for admission consideration is a full-year course in calculus. (See Mathematical Methods in the Social Sciences in the Weinberg College section of this catalog.)

# Integrated Science Program

See Accelerated Degree Programs.

# Interschool Programs

Students in any undergraduate school may enroll in the Undergraduate Leadership Program. All undergraduates may enroll in the International Studies Program as an adjunct major. Students in Weinberg College and the Schools of Music and Speech also are eligible for the Integrated Arts Program. The Music Theatre Program is open to School of Music voice majors and School of Speech theater majors. (See the Other Undergraduate Programs section of this catalog.)

Undergraduates in any school may earn a minor in transportation and logistics. Majors in the School of Music or the Departments of Art Theory and Practice, Computer Science, or Radio/Television/Film may earn a minor in art and technology. (See the Other Undergraduate Programs section for descriptions of both minors.)

Undergraduates in schools other than Weinberg College may enroll in that college's minor programs. (See Minors under Special Opportunities in the Weinberg College section of this catalog.)

# Center for the Writing Arts

Northwestern's Center for the Writing Arts sponsors a number of programs as well as a series of courses designed to highlight the University's commitment to excellence in writing. Many of the courses are taught by visiting professional writers. (See Other Undergraduate Programs section of this catalog.)

# McCormick School Honors Programs Honors Program in Undergraduate Research

The Honors Program in Undergraduate Research in the McCormick School provides an unusual opportunity for prospective freshmen with superior motivation and scholastic credentials to be admitted to work with an engineering faculty mentor/adviser in a challenging research project beginning in the first year and continuing throughout the undergraduate years.

Students may request the names and current research interests of participating faculty, enabling them to apply to a project of their choice. With the participation of a faculty sponsor, students will be selected for the program based on their high school records; SAT I or ACT, SAT II, and Advanced Placement test scores; and, usually, an interview. Interested students may request an application and additional information from the McCormick School Undergraduate Engineering Office. (See Honors Program in Undergraduate Research in the McCormick School section of this catalog.)

# Honors Program in Engineering and Education

The Honors Program in Engineering and Education is designed for students who have a strong interest in education and training as well as in science, mathematics, and engineering. Students join the program in the belief that a more technical background will give them an advantage in the research and development of educational software or in the understanding and enhancement of human learning in the classroom or workplace.

The program provides undergraduate engineering students possessing strong academic credentials and some advanced placement the opportunity to complete in five years an MA in learning sciences and a BS in engineering. Students also gain industrial and/or research experience related to their area of specialty.

High school students may apply to this program when they apply to the University. McCormick students may apply to the program during their junior year. All applications are reviewed by a committee of faculty and co-op engineering employers, who provide the industrial experience for participants.

### Honors Program in Engineering and Journalism

The Honors Program in Engineering and Journalism is intended to prepare exceptional students for communications careers emphasizing engineering, science, and technology. This joint program with the Medill School of Journalism involves completing a BS in engineering and an MS in journalism. Although the program normally requires five years of study, unusually capable students may be able to shorten the time through use of advanced placement credits and accelerated scheduling. To be considered for the program, applicants to Northwestern complete a special questionnaire that is evaluated by a Medill faculty panel. (See Honors Program in Engineering and Journalism in the McCormick section of this catalog.)

### Honors Program in Engineering and Law

The Honors Program in Engineering and Law combines a Northwestern engineering degree, on-the-job work through the McCormick School co-op program, and provisional admission to Northwestern University School of Law. Among the careers for which the program is unusually valuable are those in technologyintensive businesses and intellectual property, including patents. The undergraduate portion of the program is four years, including five academic quarters of co-op work. Students must maintain a 3.25 undergraduate GPA. They take the LSAT at the beginning of their junior year and are expected to score at or above the median of the previous year's entering law class. Their admission to the law school is reviewed late in the junior year.

Honors Program in Engineering and Management Honors students are eligible to participate in a joint program of the McCormick School and the Kellogg Graduate School of Management. High school students with superior scholastic credentials and strong motivation for study beyond the bachelor's degree may be admitted to an undergraduate engineering program at the McCormick School and also granted deferred admission to the Kellogg School.

Interested students should request an application and additional information from the McCormick School Undergraduate Engineering Office. (See Honors Program in Engineering and Management in the McCormick School section of this catalog.)

#### Weinberg College Honors Programs

The Honors Program in Medical Education, the Integrated Science Program, and the Program in Mathematical Methods in the Social Sciences are described above. Several Weinberg College majors, e.g., American studies and the English Major in Writing, are special-admission majors. (See the Weinberg College section of this catalog.)

#### Weinberg College Scholars Program

Students who demonstrate exceptional promise for independent scholarly or creative work in any field, discipline, or area represented in Weinberg College may be nominated to participate in the Weinberg College Scholars Program. Participation is by invitation of the faculty board of the program in the freshman or sophomore year and normally continues throughout the student's undergraduate career.

As a member of this special community of scholars and artists, each scholar has access to a research fund to support this course of study and associated summer or travel expenses; the seminars, lectures, and other activities of such facilities as the Kaplan Center for the Humanities and the International Studies Program; and additional advising and other assistance from the director of the program. In addition to completing the requirements for a degree in Weinberg College, participants also are assigned a special faculty mentor (or succession of mentors) to help them in shaping an individualized curriculum of courses, tutorials, and creative or research projects related to their intellectual priorities.

Mentors in the Weinberg College Scholars Program are chosen from the faculty on the basis of outstanding scholarship in a field appropriate to a scholar's interest and demonstrated aptitude for working with bright, highly motivated undergraduates.

# Formal Options

# Pass/No Credit (P/N)

The P (pass) or N (no credit) option allows students to explore fields beyond the areas of their specialization without concern about grade point average. Many undergraduate courses are open to the P/N option. For information about a particular school's P/N policy, see that school's section in this catalog.

### Student-Organized Seminars (SOS)

Students who wish to pursue studies not included in the catalog may plan and initiate their own courses under the supervision of sponsoring faculty members. SOS credit courses may be developed in all undergraduate schools except the Medill School of Journalism.

# **Residential College Tutorials**

With the sponsorship and participation of a faculty member, students in a Residential College may organize a course on a topic of special interest. Proposals must be approved by the dean's office of the appropriate school, and enrollment is normally limited to up to 10 members of the Residential College.

# Independent Study (399)

Many departments offer undergraduate seminars and independent studies for qualified students. A 399 course in any department enables a student to engage in individual special study and research, which may involve work in a laboratory or library, fieldwork outside the University, or the creation of a work of art. The maximum credit a student may receive for 399 (or equivalent independent study) during any one quarter is two units.

### Double Major

A double major is available to all students who complete a full major program in two departments.

# Self-Designed Major

A self-designed major permits all students, with the permission of the school's curriculum committee or dean, to concentrate advanced study in an area other than one of those recognized through a departmental or interdisciplinary major. This option is identified as an ad hoc major in Weinberg College, the interdepartmental studies major in the School of Speech, and the Combined Studies Program in the McCormick School.

#### **Departmental Honors Programs**

Departmental honors programs are available to students through most departments of Weinberg College, most departments in the School of Speech, and all departments of the McCormick School and the School of Education and Social Policy. They involve advanced study through special undergraduate seminars or graduate courses and/or independent work under faculty supervision.

# **Teacher Certification**

Weinberg College students also may complete the requirements of the secondary teaching program and qualify for Illinois state certification. (See Teacher Certification at Northwestern in the School of Education and Social Policy section.)

### **Off-Campus Programs**

#### Field Study

Many off-campus field studies, internships, and research opportunities sponsored by various schools and departments are available to Northwestern students. The programs vary greatly: some carry academic credit; some are undertaken in conjunction with a class or seminar; some make provision for a stipend; some entail living away from campus.

Following is a representative list of field studies programs with their sponsoring school, department, or program:

- Chicago Field Studies Internship (arts and sciences)
- Communication Studies Field Studies Program (communication studies)
- Education and Social Policy Practicum (education and social policy)
- Internships in the Arts (art history)

- Internships in Business Institutions (business institutions)
- Internships in Environmental Sciences (environmental sciences)
- Internships in the Humanities (Alice Berline Kaplan Center for the Humanities)
- Internships in Media Production (radio/ television/film)
- Internship in Women's Services (women's studies)
- Northwestern Archaeological Field School (anthropology)
- Performance Studies Field Studies (performance studies)
- Political Campaigning (political science)
- Professional Apprenticeship in Music Education (music)
- Teaching Magazine Program (journalism)
- Teaching Newspaper Program (journalism)
- Teaching Practicum (education and social policy)
- Teaching Television Program (journalism)
- Theatre Field Studies (theater)
- Walter P. Murphy Cooperative Engineering Education Program (engineering)

#### Study Abroad

Northwestern encourages qualified students to study abroad when such study promises to enrich their academic programs. By starting to plan for study abroad early in their Northwestern careers, most students, regardless of school or major, should be able to study abroad and still graduate within four years.

The Study Abroad Office provides information and advising services to all students interested in study abroad. Students who wish to transfer credit earned through foreign study must receive the permission of the University Study Abroad Committee and the Study Abroad Office *prior* to their study abroad experience. Students are required to review their plans with the dean's office of their schools and in some cases with their department advisers.

Most Northwestern students studying abroad do so in one of the University's affiliated foreign study programs, which currently are in 40 countries. Students participating in affiliated programs may apply for financial aid, including Northwestern grant assistance, to help offset the cost of their programs.

Students who wish to participate in unaffiliated foreign study programs must have their programs preapproved by the Study Abroad Office. No financial aid is available for them from the University, and Northwestern cannot process their outside aid.

All students approved by Northwestern to study abroad during the academic year remain registered at Northwestern while abroad. In most cases students pay only the cost of the study abroad program plus a Northwestern administrative fee.

Since foreign study often requires special language or other preparation, students interested in study abroad are urged to consult with the Study Abroad Office early in their Northwestern careers. The office hosts regular information sessions and houses an extensive resource library.

# **Undergraduate Schools and Courses**

# Key to Course Numbers

Although the course numbers in this catalog are as complete and exact as is possible at the time of printing, some changes may occur later, and courses may be dropped or added. The official *Class Schedule* issued for each quarter contains a complete and updated listing of courses for that quarter. The University reserves the right to cancel courses for which registration is not sufficient.

# **Course Credits and Quarters**

Daytime work in all the schools on the Evanston campus is on the quarter system. A quarter-course, the unit of instruction, is the work done in a class meeting at least three hours per week and carries the value of one unit of credit. Exceptions are courses meeting less than three hours per week, which may carry less than one unit, and 15-week courses, which carry 1.5 units. A quarter-course is the equivalent of 2<sup>2</sup>/<sub>3</sub> semester hours. (For transfer to other institutions or for certification stated in credit hours, undergraduates may consider a quarter-course equivalent to four quarter hours of credit.)

Summer Session combines the course offerings of the School of Continuing Studies, which is on the semester system, and the schools on the Evanston campus, which are on the quarter system. (For transfer credit, courses taken during Summer Session are the equivalent of four quarter hours or three semester hours.)

# Numbering System

Three sets of characters denote all courses:

- The first set is the subject code indicating the area of study.
- The second set is a three-digit course number: 100-level courses are primarily for freshmen and sophomores, usually without college prerequisite. 200-level courses are primarily for freshmen, sophomores, and juniors, sometimes with the prerequisite of a 100-level course in the same or a related department.

*300-level* courses are primarily for upperclass students, with the prerequisite of junior standing or a 100- or 200-level course in the same or a related department.

400-level courses or seminars, in which the major part of the work is not research, are primarily for graduate students; they may be open to advanced undergraduate students with permission. 500-level courses or seminars are graduate courses

in which the work is primarily research.

- The third set (one, two, or more numbers) usually indicates whether the course is part of a sequence.
   -0 = one-quarter course
  - -1,2 = two-quarter sequence
  - -1,2,3 = three-quarter sequence

Special characters may identify certain groups of courses. See departmental listings for details.

If a course carries less or more than one unit of credit, the number of units follows the course title in parentheses — e.g., (1.5) = 1.5 units of credit.

# Judd A. and Marjorie Weinberg College of Arts and Sciences

The Judd A. and Marjorie Weinberg College of Arts and Sciences - oldest of Northwestern's 12 schools - has been at the center of the University's academic and intellectual life since 1851. Weinberg College offers a liberal arts education that combines broad exposure to the insights and methods of the principal academic disciplines with focused study in one or more areas. The college faculty of approximately 500 women and men is dedicated to superior teaching informed by advanced research. Nearly all members of the faculty, including the most senior, regularly teach undergraduates in a curriculum consisting of more than 2,000 courses as well as tutorials, laboratory rotations, internships, and other individualized forms of instruction. The 3,800 undergraduates and 900 graduate students in arts and sciences enjoy a great deal of choice, with access to 25 departments and more than a dozen interdisciplinary programs offering majors and minors.

A liberal arts education in Weinberg College emphasizes the ability to reason clearly, to extract the essential significance of large bodies of information, to apply general principles in new contexts, to communicate effectively, and to be sensitive to human creativity and morality. Required course work in several disciplines provides an overview of the complexity of the world and different ways of apprehending and solving problems. These foundational courses examine how scholars from many backgrounds confront fundamental issues and how social conditions shape their inquiries. Proficiency in composition and competence in a foreign language build communication skills and expand the capability to study another culture, while intensive course work in a required major or optional minor develops an understanding of advanced concepts and lays the groundwork for original research. Many areas of the curriculum encourage interdisciplinary study that integrates the approaches of different fields and enhances the ability to address questions that cross traditional academic boundaries. A period of study abroad is also encouraged to develop firsthand

knowledge of other cultures and greater intellectual and personal independence.

Weinberg College promotes participatory learning that begins in the first year of study in required freshman seminars and continues in junior tutorials, senior linkage and honors seminars, laboratory experiences, internships, and other small-group or individualized instruction. Students can experience the excitement of discovery in the sciences, humanities, and social sciences not only through lectures by faculty working at the forefront of their fields but also through special projects developed under faculty guidance or by assisting faculty in their research. Northwestern's strong undergraduate preprofessional schools offer liberal arts students unusual opportunities to extend their interdisciplinary studies and to pursue applied work in several areas, in some cases leading to a special concentration or certification. The University's outstanding libraries, research centers, and graduate professional schools further support and enrich the educational pursuits of liberal arts undergraduates.

# Academic Policies

# Program of Study for the Degree of Bachelor of Arts

Weinberg College offers courses of study in the arts and sciences leading to the degree of bachelor of arts. Students have extensive flexibility in structuring their academic programs within the framework of general education and major requirements specified in the following section. Guidance in planning a coherent personal curriculum is available in several places. General advising is centered in the college's Office of Undergraduate Studies and Advising, where faculty advisers are available throughout the year to assist students in all aspects of academic and career planning. Each freshman is assigned a freshman adviser who, in nearly all cases, is the student's instructor in a fall-quarter freshman seminar and is in the student's area of general academic interest. Each Weinberg department and program has a corps of faculty advisers

37

who counsel all undergraduates about course selection, majors and minors, and career opportunities in their particular area.

# **Requirements for the Degree of Bachelor of Arts**

Candidates for the bachelor of arts degree must complete 45 quarter-courses and fulfill the residence and grade requirements described below. First-year students must take two freshman seminars. Before graduation, all students must demonstrate proficiency in writing and competence in a classical or modern foreign language. They must satisfy distribution requirements in six major areas of intellectual inquiry and complete the requirements of a major in one of the departments or programs of Weinberg College.

### Freshman Seminar Requirement

Freshman seminars, offered by nearly all departments in Weinberg College, are small, discussion-oriented courses designed to develop basic intellectual skills: how to read critically, think logically, and communicate effectively, typically through the investigation of a specific theme or issue. Freshman seminars are limited to 15 students to encourage discussion, and each seminar requires considerable expository writing — usually a minimum of 15–20 typed pages per quarter. These seminars ordinarily supplement rather than replace standard introductory courses and usually do not provide the preparation necessary for advanced work in a departmental program.

Every Weinberg freshman is required to complete two freshman seminars. Except for students in special programs (BA/MAs, College Scholars, HPME, ISP, and MMSS), who take their seminars in winter and spring, incoming freshmen are preregistered for a fall seminar based on preferences they submit to the Weinberg Office of Undergraduate Studies and Advising during the summer. The fall-seminar instructor also serves as the academic adviser for the year. Also during the summer, freshmen are informed of the quarter in which they are to take their second seminar. Opportunities in the winter and spring include freshman seminars linked to large introductory courses taken in the previous quarter.

# Writing Proficiency Requirement

The writing proficiency requirement has two parts: passing a writing proficiency examination (or having the examination waived on the basis of test scores) and writing satisfactorily in courses taken at Northwestern. Freshman seminar instructors make the initial evaluation of writing in courses. Students who do not write well on the exam, in their freshman seminars, or in other courses may be asked to take ENGLISH 105 Expository Writing. Courses in expository writing and intermediate composition are available for all students who wish to increase their skill and confidence in writing.

# Foreign Language Requirement

Before graduation students must demonstrate proficiency in a classical or modern foreign language equivalent to the work covered in a second-year collegelevel course. Language proficiency may be shown by achieving a score designated by the Weinberg College Council on Language Instruction on a College Entrance Examination Board Advanced Placement Examination, by passing a proficiency examination administered at Northwestern during New Student Week and periodically thereafter through the school year (language departments may impose a limit on the number of times a proficiency examination may be taken), or by successfully completing course work designated by the Council on Language Instruction.

Students who believe they are proficient in reading, writing, listening, speaking, and the culture of a language not regularly taught at Northwestern may petition the Council on Language Instruction for a proficiency examination in that language. Petitions are available in the Office of Undergraduate Studies and Advising and must be filed during a student's first quarter. In certain *extraordinary* cases of professionally diagnosed learning disability directly related to foreign language acquisition, the Council on Language Instruction may authorize a substitute for the proficiency requirement. The council will not, however, simply excuse a student from the foreign language requirement.

#### **Distribution Requirements**

To ensure breadth of education, Weinberg College students must take two quarter-courses in each of the six distribution areas listed below. The list of courses that satisfy the distribution requirements is established by a Weinberg College faculty committee. The list changes from year to year; a course must appear on the list for the year in which it was taken in order to satisfy these requirements. A current list is available in the Office of Undergraduate Studies and Advising. • I. Natural sciences

Courses in this area introduce methods of inquiry and fundamental concepts in the natural sciences.

• II. Formal studies

Courses in this area introduce concepts, methods, and use of formal rules of inference in mathematics, statistics, computer science, logic, linguistics, and cognate areas by showing how objects of thought and experience and their relationships can be analyzed in formal terms.

- III. Social and behavioral sciences Courses in this area introduce the theories, methods, and findings of empirical research on human behavior and its relation to social, cultural, economic, and political groups and institutions.
- IV. Historical studies

Courses in this area introduce the chronological development and historical relationships in cultural, social, political, economic, and military affairs in a broad temporal perspective.

• V. Values

Courses in this area introduce the analysis of moral, social, and religious values and how they have developed.

• VI. Literature and fine arts

Courses in this area foster understanding of how the attitudes, ideas, and values of individuals, groups, societies, or cultures are represented in their literature, arts, and creative activities.

As many as six of these distribution requirements may be satisfied by achieving sufficient scores on College Entrance Examination Board Advanced Placement or higher-level International Baccalaureate examinations. A list of qualifying scores and tests as well as detailed information concerning the distribution requirements are available from the Office of Undergraduate Studies and Advising.

#### Major Study Requirement

All students must fulfill the requirements of a major, which must be declared by the end of the sophomore year. Majors are declared by meeting with the designated adviser in the department or program offering the major; at that meeting a course plan is developed and a Declaration of Major Form is completed.

Students may pursue two or more majors by completing each department's major requirements.

With limited exceptions in certain formal dual-major programs, the same course may not be applied to the major requirements of two departments. However, a course used as a major course in one department may also fulfill a related course requirement for another major program.

A student may elect a major from among the following options:

• Departmental major

Each department offers one or more programs of specialization, which are described in detail immediately preceding the departmental course offerings in this catalog.

• Area or interdisciplinary major

The college offers 14 interdisciplinary majors that apply the approaches of several departments to certain scientific, cultural, and political areas. These programs, described in the corresponding entries, are American studies, Asian studies, cognitive science, comparative literary studies, computing and information systems, drama, environmental sciences, gender studies, geography, integrated science, international studies, mathematical methods in the social sciences, science in human culture, and urban studies. American studies, integrated science, and mathematical methods in the social sciences are limited-admission majors that require a special application, as does the writing major in the English department. Gender studies, geography, international studies, mathematical methods in the social sciences, science in human culture, and urban studies are available only as adjunct majors (that is, in conjunction with a second major).

Ad hoc major

Occasionally students with well-defined interests are led to programs of study that do not fit neatly into the mold of a traditional major. They may develop an ad hoc major by bringing together courses from various departments. Ad hoc majors must be approved by the faculty's Curricular Review Committee. Ad hoc majors approved in recent years include gender and medicine, formal systems and art, and Jewish studies; there is an established curriculum for the ad hoc major in neuroscience. For more information, see the assistant dean for curriculum in the Office of Undergraduate Studies and Advising.

#### **Residence and Grade Requirements**

Of the required 45 quarter-courses, the last 23 must be taken while students are enrolled as undergraduates at Northwestern. During the last three quarters preceding the granting of the BA degree, students must be enrolled in Weinberg College and in course work offered by faculty of the University.

## Pass/No Credit Option

Full-time students in Weinberg College are permitted to enroll in a limited number of courses with the understanding that they will receive in place of a regular letter grade the notation P (pass) or N (no credit), neither of which counts in the student's grade point average. No more than one course per quarter and six courses in all may be taken under this P/N option. No more than one-fifth of the total courses taken at Northwestern and offered for graduation may have grades of P or D. Courses used to satisfy the distribution, foreign language, and freshman seminar requirements cannot be taken P/N.

While some other undergraduate schools of the University offer a Target Grade–P/N registration option, such registration is not available for courses offered by Weinberg College. Special rules govern registrations by Weinberg College students in courses of the undergraduate schools where this plan is available as well as by non–Weinberg College students who transfer into the college. Questions concerning this policy should be addressed to the Office of Undergraduate Studies and Advising.

Students must achieve a grade point average of C (2.0) or higher in courses offered to meet degree requirements. No work passed with a grade of D or P counts toward a major or minor (including any course prerequisite to a course required in the departmental unit or any related course), and a grade of C- or higher must be earned in the last course in a sequence taken to fulfill the foreign language requirement. Transfer students must complete the equivalent of at least four one-quarter upperclass (300-level) courses at Northwestern in the department of their major.

In addition to and independent of the requirements set by Weinberg College, all students must satisfy the Undergraduate Residence Requirement (see Undergraduate Education section of this catalog).

# Registration in Courses in Other Undergraduate Schools of the University and at Other Universities

Weinberg College students may take advantage of Northwestern's undergraduate preprofessional schools to take as many as 11 of their required quartercourses; of those 11, up to 3 may be instruction in applied music. Dual registration in the School of Continuing Studies is included in this restriction. A student desiring to take more than two courses outside Weinberg College in a given quarter must obtain the advance consent of the Office of Undergraduate Studies and Advising.

Courses taken in the School of Continuing Studies may be counted toward the BA degree only if they are similar to those offered in the regular curricula of the Evanston undergraduate schools. This determination is made by the Office of Undergraduate Studies and Advising.

No credit is given for shop work, individual instruction in speech, correspondence courses, or course work in music education or physical education.

No more than 4 of the required 45 quarter-courses may come from the offerings of the programs of Aerospace Studies, Military Science, or Naval Science. With the prior approval of the University Study Abroad Committee or the faculty, qualified students may study abroad or undertake work at another institution in the summer. Students should consult with the Office of Undergraduate Studies and Advising concerning limitations on the amount of non-Northwestern credit that may be used toward the BA degree and with the Registrar's Office concerning limitations on the amount of such credit that may be used towards the Undergraduate Residence Requirement.

# Special Opportunities

### Junior-Year Tutorials

These tutorial classes for juniors, always with fewer than eight students, emphasize intense intellectual exchange and detailed mastery of texts and concepts. They develop critical skills, including research design if appropriate, through mutual criticism and practice in written and oral communication. Recent tutorials have included British Science Fiction (English), Masculinity and the Politics of Abortion (sociology), Philosophy of Language: The Question of Origins and Ends (philosophy), and The Life and Work of W. E. B. DuBois (history).

### Senior Linkage Seminars

In their senior year, undergraduates may take specially designed linkage seminars that approach social and work-related concerns through the eyes of an accomplished nonacademic professional with an affinity for the liberal arts and a gift for intellectual inquiry. These seminars link liberal education to professional issues, illustrating how theory and practice affect and enrich one another. In this way, they focus on the transition from the academic to the nonacademic world. Topics have included environmental law, the global economy, the role of the reporter, and issues of asylum in U.S. immigration law. Linkage seminars are announced to Weinberg College seniors before registration each quarter.

#### Undergraduate Seminars and Independent Study

By departmental invitation, seniors may take 398 Undergraduate Seminar in one or more quarters, up to a maximum of four quarter-courses.

Seniors, as well as juniors with excellent records, may register for 399 Independent Study under the supervision of a faculty member. During the quarter before enrolling in 399, students must submit to the department for approval a detailed description of the work they will undertake and the basis for its evaluation. Upon completion of the course, they also must submit an abstract of the completed work to the department, where the description and the abstract are filed.

Students may not register for more than two credits of 399 in a quarter. No more than nine quarters of 398 and 399 may be presented as credit for graduation. Certain independent study courses offered by some departments with course numbers different from 398 and 399 are also subject to these restrictions.

# Honors

Each major in Weinberg College offers an honors program leading to the award, at graduation, of departmental honors to seniors with outstanding achievement in connection with a research project or other integrative type of work. Although the detailed criteria vary somewhat by major (and may be consulted under the listings of individual departments and programs), all share certain features.

Students recommended for departmental honors must have completed with distinction both such regular courses as may be required of them by their major and at least two quarters of 398 or 399 or their equivalent or 400-level courses or some combination thereof. The honors project must result in a research report, thesis, or other tangible record; course work alone, such as completion of 400-level courses, is not sufficient. Simple data collection, computer programming, analysis of data with canned programs, and summaries of primary or secondary sources are not alone bases for the award of departmental honors.

Each major has an undergraduate honors committee responsible for administering its honors program and for preparing the final recommendations for honors that are submitted in May to the Weinberg College Committee on Superior Students and Honors. Students are proposed for honors by the faculty adviser, who writes a letter describing and evaluating the student project. Additional evaluative letters giving independent and substantive judgments of the project must be submitted by faculty members unconnected with the student's project. The departmental honors committee reviews all nominations for departmental honors in a given year during spring quarter and takes a separate recorded vote on each candidate. Approved nominations are then forwarded to the Committee on Superior Students and Honors for final review.

# Minors

Students may choose to pursue a minor from among more than 40 departments and programs, as well as the interschool Integrated Arts minor (see Other Undergraduate Programs). Specific minor requirements are given under the appropriate headings in this catalog. Completion of a minor is optional and not a degree requirement, and no more than one minor or minor concentration may be pursued and listed on a student's transcript. Except as explicitly stated and in the case of related courses, courses used to fulfill requirements for the student's major(s) may not be used to fulfill the requirements for the minor.

*Concentrations in the School of Music and the School of Speech for Weinberg College Students* Students in Weinberg College may elect to pursue a special concentration in music studies offered by the School of Music or one of four special concentrations offered by the School of Speech. These special curriculum concentrations, consisting of five to six courses, have limited enrollment and are available only to Weinberg College students. More information is available at the Weinberg College Office of Undergraduate Studies and Advising.

41

# Preprofessional Study

Weinberg College offers its students excellent preparation for subsequent training in professions such as law, medicine, and management. Each year many graduates pursue professional study in these areas. Other students enter the work force directly.

All majors can furnish suitable preparation for professional schools, provided appropriate courses are included in the student's course of study. However, no major is intended solely as preprofessional training. The college advisers in the Office of Undergraduate Studies and Advising help students design academic programs that combine the breadth of a liberal arts education with adequate preparation for further professional study. The Office of Undergraduate Studies and Advising has prepared pamphlets describing in detail the admission requirements of graduate professional schools and the ways in which those requirements may be met at Northwestern.

# Academic Options

# Combined Bachelor's and Master's Degree Programs

Exceptional undergraduates may be able to earn both a bachelor's degree and a master's degree in four years of study in the following departments: anthropology, chemistry, classics, economics, French, geological sciences, linguistics, political science, sociology, and statistics. Students are admitted to these programs only by invitation of the department and with the approval of the Graduate School. (See Academic Options in the Undergraduate Education section of this catalog.)

# Combined Weinberg College-Medical School Program

The Honors Program in Medical Education (HPME) is designed for unusually gifted high school students who seek a career in medicine or medical science. It provides a plan whereby students entering Northwestern are admitted simultaneously to Weinberg College and to the Medical School. HPME students then participate in a challenging program, with the first three years in undergraduate study and the last four years in the Medical School, thus reducing the period of formal training by at least one year.

Students in HPME must successfully complete 36 quarter-courses while in Weinberg College and complete an Undergraduate Residence Requirement of nine quarters. The course requirement includes 11 prescribed science courses. Selection of the remaining 25 courses depends on the curriculum chosen by the student. Options include completion of a BA degree or study abroad in a Northwestern-affiliated, ad hoc, or other program approved by the University Study Abroad Committee.

Further information may be obtained from the premedical adviser in the Office of Undergraduate Studies and Advising.

# Combined Weinberg College-School of Music Program

Students accepted into the combined Weinberg College–School of Music program may simultaneously earn a BA degree from the college and a BMus degree from the School of Music. They must complete all Weinberg College degree requirements, including at least 30 Weinberg College courses, as well as all requirements for the bachelor of music degree in the School of Music, including at least 30 music courses. Fulfilling both Weinberg College and School of Music requirements takes five years of full-time study, and an Undergraduate Residence Requirement of 15 quarters is obligatory.

Participants in this combined program must be accepted by both the School of Music and Weinberg College. Interested students should consult with the associate dean for undergraduate studies in Weinberg College and the director of admissions in the School of Music for current information.

# **Teaching Certification**

Students enrolled in a number of departments of Weinberg College may simultaneously pursue secondary teaching certification through the School of Education and Social Policy. Areas of certification are art, biological sciences, chemistry, economics with history, English, French, German, history, Latin, mathematics, physics, political science with history, sociology with history, and Spanish.

Majors in the certification areas who wish to be considered for teaching certification must apply, be admitted to, and complete all requirements of the Secondary Teaching Program as described in the School of Education and Social Policy section of this catalog. Application should be made with the Office of Student Affairs in the School of Education and Social Policy.

### **Other Undergraduate Programs**

Weinberg College students may enroll in courses offered by the interschool Undergraduate Leadership Program as well as those offered by several other interschool programs administered by the college, including the Center for the Writing Arts, the Integrated Arts minor, and the International Studies adjunct major (see the Other Undergraduate Programs section of this catalog).

#### Study Abroad

Weinberg College students are encouraged to study abroad, both in programs that are affiliated with Northwestern and those that are not. Prior approval is required in order to receive credit for any study abroad other than the summer programs in Mexico and Quebec operated by the Committee on Institutional Cooperation (consisting of the 11 Big Ten universities and the University of Chicago).

The philosophy of the college is that the best foreign study experience combines continued work in a student's chosen course of study with significant opportunities for immersion in the culture of the host country. For example, an economics major might study NAFTA in Mexico; a political science student might study the European Union in France. The college encourages participation in full-academic-year programs that include extensive study of languages and culture. Complete study abroad information is available from the Study Abroad Office.

### **General Studies**

These interdivisional courses are open to all qualified students.

**GEN LA 280-7 Residential College Tutorial** A seminar for members of a residential college on a theme of common interest, meeting in the residential college and often directed by one of its faculty associates. Enrollment is normally limited to nine students. Proposals for tutorials must be approved by the associate dean for undergraduate studies of Weinberg College.

**GEN LA 298-0 Student-Organized Seminars** Students who desire to study topics in arts and sciences that are not covered in the college's course offerings may initiate their own courses under the supervision of sponsoring faculty members. Enrollment in these seminar courses is limited to 20 students. The student organizer or organizers must, in consultation with the faculty sponsor, prepare a plan for the seminar and submit it to the associate dean for undergraduate studies before the middle of the quarter

preceding the quarter in which the seminar is held. The plan must include a topic description, a reading list, specification of the work that will be graded (such as term papers and written examinations), prerequisites, and the meeting schedule. The associate dean for undergraduate studies forwards proposals to the Curricular Review Committee of the college, which must review and approve all seminars to be offered. Students may enroll in only one Student-Organized Seminar per quarter, and enrollment must be on the P/N basis. Weinberg College students interested in organizing a seminar should consult the associate dean for undergraduate studies for further details.

**GEN LA 393-0 Chicago Field Studies Internship** (4 units) Full-time participant-observer experience in Chicago-area political, planning, and policy organizations; service, civic, and community institutions; groups committed to social change. Placement of students in responsible volunteer positions; "real-world" mode of inquiry complementing conventional campus-based and outside-observer approaches to understanding urban processes. Number of credits applicable toward the major, if any, determined by student's department. Prerequisite: consent of program director.

# African American Studies

The study of the African American experience has a long and distinguished history in the United States. The field has developed exciting insights as well as firm intellectual and empirical foundations for the systematic study of the African American experience and, through such study, for a greater understanding of the larger American experience. From its beginnings, the field has been strongly interdisciplinary, bringing the perspectives of different disciplines to bear on understanding black life. The Department of African American Studies exemplifies these traditions and strengths and, through its courses, provides opportunities to explore the richness and diversity of the African American experience in a meaningful and coherent way.

The department offers courses that focus on people of African descent in the United States and other regions of the Americas and the African diaspora - the communities created by the dispersion of peoples from the African continent. By comparing the black experience in various parts of the world, students learn to analyze identity, race, and racism as formations that change over time and space. This broad study of the African American experience is one of the key features of the department, distinguishing it from similar departments at other institutions. Major themes in the curriculum include the nature of colonization and its impact on the colonizer and the colonized; racism and its effects on society as well as on scholarship; the importance of oral language, history, and tradition in the African American experience; the roots and development of African American music, literature, and religious styles; analysis of key institutions such as the family; and the traffic of people, ideas, and artifacts throughout the African diaspora.

43

African American studies provides good preparation for graduate work in the social sciences, the humanities, and the professions, as well as for jobs and careers in a variety of fields. Education, law, journalism, urban planning, health-care delivery and administration, business, social work, and politics are only a few of the fields for which African American studies provides an excellent background. In addition, since scholars and political leaders are paying increased attention to the Caribbean and Latin America as well as to blacks and other minorities in the United States, students of African American studies will enter a field that touches on issues of far-reaching national and international significance.

# Major in African American Studies

#### Departmental courses

Core courses: 210-1,2, 225, 236-1,2

**Concentration:** In addition to the core sequence, 5 courses selected from one of the following areas:

- Expressive culture and intellectual history: 349 and 4 other courses
- Historical and comparative studies: 245, 332, and 3 other courses
- Social and behavioral studies: 320 and 4 other courses, 1 of which includes data handling and analysis

Depending on the topic, 380 may, with the consent of the director of undergraduate studies, be counted in any of these areas.

Senior sequence: 2-quarter sequence taken in the senior year: 390 and either 396 or 399

**Related courses:** Subject to approval of the department adviser, majors must take 5 courses offered by other departments at the 200 or 300 level, at least 3 of which are at the 300 level. Students are expected to choose related courses that develop the methodological skills and substantive focus appropriate to their areas of concentration.

### **Minor in African American Studies**

The minor in African American studies provides thorough exposure to contemporary scholarship concerning the African American experience.

#### Minor course requirements (8 units)

- 2 foundation courses chosen from 210-1,2; 225; 236-1,2; or 240
- 6 additional courses in the department or approved by the department, 4 at the 300 level and 1 history course chosen from 214-1,2; 332; HISTORY 301-1,2; or another approved history course

#### **Core Courses**

### AF AM ST 210-1,2 Survey of African American Literature

Two-quarter sequence on the literature of blacks from slavery to freedom. Works of major writers and significant but unsung bards of the past. **AF AM ST 225-0 African American Culture** Principal facets of African American culture, slavery to the present. Interconnections between African American culture and the sociopolitical context in which it developed. Role of African American culture in the larger American culture.

**AF AM ST 236-1,2 Introduction to African American Studies 1.** Method, historical overview (Africa, slavery, rural, urban), social class, racism. **2.** Institutional development of politics, church, education, culture, women/ family; historical and contemporary liberation struggle.

#### **Expressive Culture and Intellectual History**

**AF AM ST 240-1,2,3 Survey of African American Music** Development of black American music from Africa to the Americas. Secular and sacred works, styles, performance practices. Blues forms, jazz, ragtime, musicals, black composers, black-derived music of Latin America.

**AF AM ST 259-0 Introduction to African American Drama** Thematic and historical survey of African American drama. Sociopolitical context, the aesthetic reflected in the work, impact on African American and general theater audiences.

**AF AM ST 331-0 The African American Novel** Readings in classic black American fiction. The author as creator and participant. Works of Wright, Ellison, Baldwin, and others. Prerequisite: sophomore standing.

**AF AM ST 349-0 Black Families in Literature** Much of the most significant literature written by black American authors has had at its center a deep concern for the problems of family life, particularly living under the duress of racism.

**AF AM ST 360-0 The Art of Toni Morrison** Investigates novels by Toni Morrison: *The Bluest Eye, Sula, Song of Solomon, Tar Baby,* and *Beloved.* The mythical powers of Morrison's art, her ability to haunt the reader's imagination with some of the most memorable characters in modern literature, and her evocative way of storytelling.

**AF AM ST 378-0 The Harlem Renaissance** African American political and social movements and cultural production in theater, music, visual arts, and literature from 1915 to 1930. Prerequisites: consent of instructor and 210-1,2 or another African American literature course.

**AF AM ST 379-0 African American Women Playwrights** Texts written from approximately 1916 to the present. Recuperation of biographical information, theatrical representations of the "folk" and of black feminism, antilynching and other propaganda plays, and development of analytical tools. Prerequisites: consent of instructor and 259-0 and/or other African American literature courses.

#### **Historical and Comparative Studies**

**AF AM ST 214-1,2 History of Racial Minorities in North America** Problems and experiences of racial minorities: blacks, Native Americans, Asian Americans, and Hispanic Americans. Comparative exploration of their relationships to each other and to the majority society. **1.** 1600–1865. **2.** 1865–1974.

### AF AM ST 220-0 The Civil Rights Movement and Beyond

Various struggles for racial equality in the United States from World War II to the present; the movement's transformation of the South and the nation; the persistence of racial injustice.

# AF AM ST 245-0 Black Communities in Diaspora

Comparative exploration of social and cultural life in communities of African slaves and their descendants in the Caribbean, Latin America, Asia, and the United States. Common heritage and diverse developments.

**AF AM ST 329-0 Sports and the African American Experience** Exploration of African American history through sports and the experiences of professional athletes; consideration of racial ideologies and mythologies constructed and contested in the world of sports.

**AF AM ST 330-0 Black Women in 20th-Century United States** Experiences and leadership of African American women in major events in recent history, including antilynching, women's suffrage, civil rights movements, and World War II.

**AF AM ST 345-0 Politics of Afro-Latin America** Introduction to the racial politics of African American communities outside the United States; exploration of relationships between racial and social inequality, racial difference, and political development in selected Latin American nations.

# Social and Behavioral Studies

**AF AM ST 315-0 Urban Education** Problems of urban education; special attention to prospects for reforming urban school systems.

**AF AM ST 320-0 The Social Meaning of Race** Race as a social concept and recurrent cause of differentiation in multiracial societies. Impact of race on social, cultural, economic, and political institutions. Discussion of prejudice, racism, and discrimination.

#### AF AM ST 321-0 Researching Black Communities

Introduction to the methodology and findings of qualitative research on black communities in the United States. Topics include black migration, urban geography, black culture, class and gender stratification, racial identity.

**AF AM ST 332-0 Black Feminist Theories** In-depth survey of major constituents of black feminist theory, utilizing interdisciplinary approach with readings from history, sociology, literature, popular culture, and religious studies.

# AF AM ST 334-0 Gender and Black Masculinity

Perceptions and constructions of black masculinity within African American and "American" cultures in the United States; readings in gender studies, feminist theory, African American studies, cultural studies.

# **Courses for Advanced and Senior Students**

**AF AM ST 380-0 Topics in African American Studies** Advanced work on social, cultural, or historical topics: for example, images of black women in the diaspora, urban revolts of the 1960s, black feminist theory. May be repeated for credit with different topic. Depending on the topic, 380 may, with consent of the director of undergraduate studies, be counted in any of the areas listed above.

# **AF AM ST 390-0 Research Seminar in African American Studies** Methods of researching the African American

experience. Identification of research problems; location, selection, and critique of relevant literature; data gathering and analysis; report writing. Topics vary.

# **AF AM ST 396-0 Internship in African American Studies** Direct participation in the regular activities of a community organization in Evanston or Chicago. Analysis of social and cultural institutions through field study and participant observation.

**AF AM ST 399-0 Independent Study** Open to advanced students with consent of department.

# **Related Courses in Other Departments**

# African and Asian Languages Program

The Program of African and Asian Languages (PAAL) offers opportunities to explore through language study some of the fascinating cultures that are vital for Americans to understand: those of Africa, China, India, Japan, Korea, and the Middle East. Students who combine study of one of PAAL's African or Asian languages with a major or background in such departments as history, economics, political science, or sociology will be well prepared for graduate study, professional programs, and careers in international business, journalism, trade, law, or diplomacy. Even the natural sciences have exchange programs in which knowledge of non-Western languages is useful.

PAAL offers courses in Arabic, Chinese, Hebrew, Hindi, Japanese, Korean, and Swahili. Minors are available in Chinese and Japanese. Other African languages can be made available. Any PAAL language may be taken to fulfill the Weinberg College requirement of two years of foreign language study.

For undergraduate programs that integrate the language offerings of PAAL, see African studies, Asian studies, international studies, and Jewish studies. Advanced language study may be taken through registration in AAL 399 Independent Study. Students are strongly encouraged to enrich their language learning by studying abroad. Interested students should consult an adviser in the Study Abroad Office as early as possible in their academic career.

# Minor in Chinese or Japanese Language and Culture

These PAAL minors offer a concise and coherent set of courses designed to develop strong language skills in either Chinese or Japanese along with a sense of the cultural context of the language. The minors also offer the opportunity to incorporate study abroad experience for even more intensive encounters with the language and culture.

# Minor course requirements (8 units)

Option A

• Language (5 units):

3 quarter-courses of 300-level Chinese or Japanese

2 quarter-courses of 400-level Chinese or Japanese

- Literature/culture (3 units):
- 2 quarter-courses of Chinese or Japanese literature in translation (COMP LIT 274-1,2,3 or 271-1,2,3,4)
  1 course from an Asian studies discipline (e.g., ART HIST 240, HISTORY 281, 284, 381, or 384)

#### Option B: Semester or full-year study abroad

- Language (5 units):
- 3 quarter-courses of 200-level Chinese or Japanese taken either partly or entirely in China or Japan (remainder taken upon return)
- 2 quarter-courses of 300-level Chinese or Japanese taken upon return
- *Literature/culture (3 units):* Any 3 disciplinary courses taken in China or Japan

# African Language Courses

**AAL 105-1,2,3 Elementary Arabic** Three-course introduction to modern standard Arabic. Speaking, reading, and listening comprehension skills developed.

**AAL 106-1,2,3 Intermediate Arabic** Grammar, reading of Arabic texts, oral communication in Arabic. Prerequisite: 105-3 or equivalent.

**AAL 121-1,2,3 Swahili I** Basic literacy and interactive proficiency, in cultural and historical context.

**AAL 122-1,2,3 Swahili II** Development of literacy and interactive proficiency skills; introduction to verbal arts. In Swahili. Prerequisite: 121-3 or equivalent.

**AAL 207-1,2,3 High Intermediate Arabic** Reading and discussion of Arabic writings relevant to students' interests and needs. Emphasis on writing skills. Prerequisite: 106-3 or equivalent.

# AAL 223-1,2,3 Introduction to Swahili Literature

Overview of Swahili oral verbal arts, classical literature, modern writing. In Swahili. Need not be taken in sequence. Prerequisite: 122-3 or equivalent.

# Asian Language Courses

**AAL 111-1,2,3 Elementary Chinese** Speaking, aural comprehension, reading, writing of basic vernacular Chinese. Both standard and simplified characters involving about 1,500 compounds. Accelerated section available for students with some oral proficiency but no literacy.

**AAL 112-1,2,3 Intermediate Chinese** Conversation, aural comprehension, writing based on reading Chinese stories, poems, stories of ballets, historical and cultural texts. Accelerated section available for students with some oral proficiency but no literacy. Prerequisite: 111-3 or equivalent.

**AAL 115-1,2,3 Japanese I** Conversation, grammar, reading, writing for beginners. Issues of United States–Japan cross-cultural communication. Five class meetings a week plus language laboratory.

**AAL 116-1,2,3 Japanese II** A comprehensive approach to conversation, grammar, reading, writing. Four class meetings a week. Prerequisite: 115-3 or equivalent.

**AAL 125-1,2,3 Korean I** Three-course introduction to basic literacy and oral proficiency. Accelerated section available for students with some oral proficiency but no literacy.

**AAL 126-1,2,3 Korean II** Development of literacy and interactive proficiency skills. Prerequisite: 125-3 or equivalent. Accelerated section available for students with some oral proficiency but no literacy.

**AAL 128-1,2,3 Hindi I** Three-course introduction to basic literacy and oral proficiency. Accelerated section available for students with some oral proficiency but no literacy.

**AAL 129-1,2,3 Hindi II** Three-course sequence developing literacy and interactive oral proficiency skills. Prerequisite: 128-3 or equivalent. Accelerated section available for students with some oral proficiency but no literacy.

**AAL 213-1,2,3 Advanced Chinese** Readings from the works of contemporary Chinese writers. Discussion and writing based on the reading materials. Prerequisite: 112-3 or equivalent.

**AAL 217-1,2,3 Intermediate Japanese** Advanced readings in modern colloquial Japanese; prose essay, literary, and newspaper styles. Prerequisite: 116-3 or equivalent.

**AAL 318-1,2,3 Advanced Japanese 1.** Advanced reading skills: comprehension, vocabulary acquisition, speed. Oral and written translation. **2.** Newspaper reading and developing oral/aural skills. **3.** Advanced writing skills, further reading, and oral/aural skill development. Prerequisite: 217-3 or equivalent.

**AAL 319-1,2,3 Chinese IV** Advanced reading and writing skills and Chinese literature in the language. Prerequisite: 213-3 or equivalent.

# **Hebrew Courses**

**AAL 101-1,2,3 Elementary Hebrew** Understanding, speaking, reading, writing of mainly conversational Hebrew. Hebrew used as language of instruction. Drill in language laboratory.

**AAL 102-1,2,3 Intermediate Hebrew** From language to literature: review of grammar; reading and discussing Hebrew literary works (prose and poetry) and newspaper articles. Compositions and oral presentations. Prerequisite: 101-3 or equivalent.

**AAL 203-1,2,3 Advanced Hebrew** Reading Hebrew literature, some Biblical but mostly modern prose. Compositions and oral presentations. Prerequisite: 102-3 or equivalent.

**AAL 355-1,2,3 Hebrew IV** Readings in Hebrew literature in the language. Prerequisite: 203-3 or equivalent.

# All PAAL Languages

**AAL 399-0 Independent Study** For undergraduate students of any of the above languages who have advanced beyond the regular course offerings.

# African Studies Program

In 1948 the distinguished scholar Melville J. Herskovits organized the Program of African Studies at Northwestern; a half-century later the program remains a model at the forefront of Africanist study and research. Through sponsorship of multidisciplinary courses with African content, language training, and promotion of Africa-based study, the program supports and enlivens the undergraduate study of Africa while serving as the University's "headquarters" for formal and informal interaction among interested students, faculty, and visitors. Every year the program brings undergraduates studying Africa together with faculty and other experts in many areas of inquiry - across disciplinary boundaries and regional specializations - for lectures, seminars, workshops, conferences, and research programs. Northwestern's Melville J. Herskovits Library of African Studies, an unparalleled resource for Africanist study, attracts students and scholars from all over the world. Over the years the program has remained in active contact with its counterparts in Africa and elsewhere, while expanding its role in the University and off-campus communities.

#### **Minor in African Studies**

The minor in African studies approaches the study of African societies, cultures, histories, and arts across the disciplines — in the humanities, social sciences, and the professions. Students earning a bachelor's degree in Weinberg College or another undergraduate school may complete a minor in African studies by merging a core of courses with African content with their major program of study. Undergraduates in all disciplines are welcome to participate formally or informally in the program's activities, which advance the training of Africa specialists at Northwestern and promote awareness of Africa in a wider context.

#### Minor course requirements (6 units)

- 6 courses with African content from at least two departments. At least 2 of the 6 courses must be from the 3-quarter sequence of HISTORY 255-1,2,3. Students are encouraged to develop full-length research papers on African topics, supervised by faculty with African interests. They may write these papers as part of regularly offered classes, independent study courses, or senior honors programs.
- Demonstrated competence in any African language or a European language other than English that is used in Africa (French or Portuguese) by completing the second year of language study or being certified by the appropriate language department. Professional school students whose curricula preclude meeting this requirement as well as students with proficiency in another Weinberg College language may petition the program to count additional courses with African content toward the minor in lieu of fulfilling the language requirement.

• Minimum of an overall B average in these courses. Courses taken for P/N are not counted toward the minor.

Students applying for the minor in African studies, conferred at the end of each spring quarter, must present records showing a minimum of 5 courses not doublecounted in their major. Program staff encourage students to meet with them to initiate and monitor progress toward meeting the requirements.

# Courses

**AFST 390-0 Topics in African Studies** A general examination of topics relevant to African studies. May be repeated for credit with change in topic.

**AFST 398-0 Seminar in African Studies** Close examination and discussion of an issue or question central to African studies. May be repeated for credit with change in topic.

#### American Studies Program

The American Studies Program is an integrated interdisciplinary major involving faculty members of several departments. By drawing on a broad range of knowledge from the humanities and social sciences, the program examines the components of American culture and ways of integrating them. Students are allowed a wide-ranging yet disciplined exploration of problems that cross the boundaries of traditional academic fields. Freshmen and sophomores apply for admission to the major in the spring quarter. Because this selective program has more applicants than available space, admission depends in part on academic distinction and on demonstrated interest in American cultural studies.

# **Major in American Studies**

**Program courses:** All sophomore and junior majors must complete 301-1,2,3. Seniors must complete 390-1,2,3. **Related courses:** Ten quarters at the 200 or 300 level in those courses throughout the University comprising the general curriculum in American studies. These courses will be apportioned in a way that satisfies the interdisciplinary purpose of a major in American studies and expresses each student's explicit intellectual goals, but every major is required to take HISTORY 210-1,2 or an approved equivalent as early as possible in his or her academic career.

### **Courses Primarily for Freshmen and Sophomores**

**AMER ST 210-0 Topics in American Culture** Topics of interest to the American cultural analyst and historian: for example, early American symbols of heroism, the meaning of the frontier. Aimed at large general undergraduate enrollment. May be repeated for credit with consent of program director.

**Courses Primarily for Juniors and Seniors AMER ST 301-1,2,3 Seminar for Majors** Yearlong sequences sharing a broad theme, integrating methods and materials from different disciplines. Change of instructor each quarter; change of theme every year. Limited to 20 students — majors only.

**AMER ST 310-0 Studies in American Culture** Readings and discussions of topics in American cultural life: for example, law in 19th-century America; manners and morals in antebellum society. Limited enrollment with emphasis on student participation. Prerequisites vary (check with program director or in program office). May be repeated for credit with consent of program director.

**AMER ST 390-1,2,3 Senior Project** Thesis or field study. Required for honors.

**AMER ST 399-0 Independent Study** Readings and conferences on special subjects for students pursuing their area of interest within the major.

### Anthropology

Anthropology studies humankind from a broad comparative and historical perspective: the biological evolution of the human species and aspects of the biology of living human populations, the comparative study of living primates, the origins of languages and cultures, the long-term development of human cultures over many millennia, and the social life of humans in groups — families, communities, and nations. Anthropologists attempt to describe specific cultural traditions, forms of social structures, languages, and specific transitions in human evolution and cultural history. They compare cultures and societies to assess what cultures are similar or different, and why. Anthropology is at once a biological science, a social science, and one of the humanities.

Anthropology's breadth and its emphasis on biological and cultural change and cross-cultural comparison make it an ideal major for anyone seeking a solid liberal education as well as for those seeking careers in academic or applied anthropology or archaeology. It serves as an excellent background for students who plan to pursue specialized training in law, medicine, nursing, social work, education, conservation, international relations, or commerce. The world is an ever-smaller and more culturally mixed global community. Knowledge of the developmental processes that explain biological and cultural differences is relevant to a variety of careers. For example, prelaw students would profit from the cross-cultural study of conflict and conflict resolution; premedical students from courses in human evolution and population genetics as well as the cross-cultural study of health and disease.

The department has many strengths: the application of evolutionary and other biological perspectives to the development of humankind; North American, South American, Middle Eastern, and European prehistoric archaeology; the study of African societies; the anthropology of complex societies; political economy; and gender. The department is strong in basic theory and refinements of qualitative and quantitative analysis of anthropological data as well as ethnography. Two field schools, in archaeology and in cultural anthropology, provide practical proving grounds for classroom theorizing. All majors receive training and supervision in field research from faculty.

#### Major in Anthropology

Students are expected to complete a 15-course program (11 courses in anthropology and 4 in related fields) for a major in anthropology. The department's 4 required 200-level courses provide background in the four major subfields of anthropology. 370 examines the philosophical and historical roots of the discipline. 362-1 and 388 introduce students to research design issues. Four additional 300-level courses develop the student's intellectual maturity in the discipline. All seniors are required to take 398 and to prepare a senior thesis. This requirement provides students with an opportunity to conduct original research and, in the process, gain valuable analytical, critical thinking, and writing skills.

# Departmental courses

- 211, 213, 214, and 215. Students with previous background in anthropology may petition to substitute a 300-level course for a 200-level requirement.
- 370
- 388. In the case of archaeology and cultural/linguistic students, an additional course in subfield methods is required (see 300-level requirements below).
- 4 additional 300-level courses selected in consultation with an adviser. Normally, these courses are chosen from one of the three subfields listed below, but students may, with the consent of their adviser, develop a focus that bridges the subfields of anthropology (e.g., culture and technology, health and human development, the institutionalization of power).

*Archaeology:* 322 or 325; 3 courses chosen from 301, 302, 303, 311, 321 (offered in summer), 328, 329, 339, 381, 382, 384, 390, 396 (offered in summer)

*Biological anthropology:* 386 and 3 courses chosen from 306, 310, 312, 313, 314, 315, 317, 383, 390

*Cultural/linguistic anthropology:* 389 and 3 courses chosen from 310, 311, 320, 330, 332, 339, 341, 347, 350, 354, 360, 361, 363, 364, 372, 374, 376, 377, 383, 390, 395 • 398 (senior year)

**Related courses:** Subject to the approval of the department adviser, 4 courses from other departments and programs. One of these courses must be in formal or statistical methods, and at least 2 of these courses must be 300-level courses. All 4 courses should relate to the student's independent research work and strengthen the focus that guided the selection of 300-level courses in anthropology.

### Human Biology Concentration

Anthropology majors interested in pursuing a concentration in human biology should complete all premedical requirements in addition to anthropology core course requirements with a biological anthropology focus. For information on premedical requirements, see the Office of Undergraduate Studies and Advising.

#### Minor in Anthropology

The minor in anthropology provides students in other fields with a framework to pursue a particular focus within the discipline. Such a focus might be within one of the subfields of anthropology (i.e., biological anthropology, archaeology, cultural anthropology, linguistic anthropology), in area studies (e.g., Africa, the Middle East, the United States), or in a specific topic (e.g., ethnicity, gender, the origins of the state, urban studies). To fulfill this goal, the minor in anthropology combines two of the four 200level courses required of majors in anthropology, one in the area of ethnography (211 or 215) and one in the area of origins (213 or 214), with five 300-level courses that constitute a coherent focus. The 200-level courses provide a foundation for pursuit of specialized topics.

Students pursuing the minor in anthropology must consult with the department's director of undergraduate studies to establish a program and be assigned a departmental adviser.

- Minor course requirements (7 units)
- 211 or 215

• A coherent combination of 5 300-level courses in anthropology with a specific focus. Depending on the focus selected, a methods course may be required as 1 of the 5 300-level courses.

**Sample programs:** Students majoring in biological sciences but with an interest in ecology and behavior would build a coherent minor in biological anthropology by taking 211 or 215; 213; and a focused course selection such as 306, 310, 312, 313, and 383. Students majoring in history with an interest in pre- and early history would build a coherent minor in archaeology by taking 211 or 215; 214; and a focused course selection such as 301, 302, 322, 329, and 381. Students majoring in political science with an interest in noninstitutional or nongovernmental political processes would build a coherent minor in cultural anthropology by taking 211; 213 or 214; and a focused course selection such as 311, 320, 332, 341, and 347. Other programs for the minor in anthropology can be designed to meet a student's particular needs or interests.

*Note:* Students who are following the department's previous curriculum should consult with the director of undergraduate studies.

#### Four-Year BA/MA

The department offers a four-year BA/MA program in anthropology for outstanding undergraduate majors. Interested students should contact their adviser or the director of undergraduate studies and should see Four-Year Master's Programs in the Undergraduate Education section of this catalog.

<sup>• 213</sup> or 214

49

#### Honors in Anthropology

Students wishing to be considered for departmental honors should make inquiries no later than spring quarter of the junior year. In order to be eligible for honors, students must have a grade point average of 3.5 or above in anthropology courses. Enrollment is required in one quarter of 399 Independent Study or an appropriate graduate-level course in addition to 398 (required for all majors). 399 should be taken before enrolling in 398. Students who meet these requirements and prepare an outstanding senior thesis will be awarded honors in anthropology. For more information, consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

# Courses Primarily for Freshmen and Sophomores ANTHRO 105-0 Fundamentals of Anthropology

Introduction to anthropology; the biological evolution of humankind; the evolution of culture; the comparative study of existing or historically recorded societies.

**ANTHRO 112-0 New Directions in Archaeology** New frontiers in archaeological perspectives of historical events, public policy, historic preservation, and prehistoric interpretation.

**ANTHRO 211-0 Culture and Society** Introduction to the comparative study of culture, exploring different types of social organization, their evolutionary significance, and their economic and political correlates.

**ANTHRO 213-0 Human Origins** Emergence of human species through the process of organic evolution, emphasizing genetics, the fossil record, and comparison with our nearest living relatives.

**ANTHRO 214-0 Culture Origins** The evolution of culture from its earliest beginnings through the development of urbanism and the state. Principles of archaeological research.

#### ANTHRO 215-0 The Study of Culture through Language

The scope of linguistic anthropology, from the study of language as an end in itself to the investigation of cultures through the medium of human languages.

**ANTHRO 220-0 Evolution of Moral Systems** Critical examination of evolutionary theories of the origin and development of the human propensity to make moral judgments. Prerequisite: 105.

### ANTHRO 225-0 Evolution of Human Society

Theories of the long-term evolution of human social organizations; comparative analysis of different scales of organization; population, environment, technology, subsistence, political economy, social stratification.

**ANTHRO 232-0 Myth and Symbolism** Introduction to different approaches to the interpretation of myth and symbolism, e.g., Freudian, functionalist, and structuralist.

### ANTHRO 255-0 Contemporary African Worlds

Use of key anthropological insights about value judgments

and cultural relativism to examine the survival strategies and turbulent histories of contemporary African societies.

#### **Courses Primarily for Juniors and Seniors**

For 300-level courses in anthropology, the prerequisite is sophomore standing or one 100- or 200-level course, unless a specific prerequisite is included in the description below. A student without the prerequisite occasionally may be admitted to a course with the consent of the instructor.

**ANTHRO 301-0 Hunter-Gatherer Archaeology** Evolution and cultural history during the Pleistocene epoch. Interrelationship of biology, environment, and culture from earliest hominids through appearance of *Homo sapiens*. Prerequisite: 214 or equivalent.

ANTHRO 302-0 Agriculture: Its Origins, Environmental Impacts, and Social Transformations Beginnings of agriculture, one of the great revolutions in human history. Domestication of plants and animals, dispersal of domesticates, long-term intensification of agriculture, environmental consequences of agriculture, and related social and cultural transformations. Archaeological evidence from Mesopotamia, Europe, Mesoamerica, and North America. Prerequisites: 214, 225, BIOL SCI 204, or ENVR SCI 235.

**ANTHRO 303-0 Origins of Civilization** Comparative survey of prehistoric civilizations and systematic examination of the formative factors in their evolution. Prerequisite: 214 or equivalent.

**ANTHRO 306-0 Evolution of Life Histories** Evolved strategies for allocating resources among growth, reproduction, and maintenance; emphasis on the biological processes underlying the human life cycle and its evolution.

**ANTHRO 310-0 Evolution and Culture** Introduction to the application of theory from evolutionary biology to cultural anthropology; principles of evolutionary biology; application of principles to human social behavior and culture. Prerequisite: 213 or equivalent.

**ANTHRO 311-0 The Indians of North America** Aboriginal cultures of northern Mexico, continental United States, Alaska, and Canada. Languages, art, and social, economic, and religious life.

**ANTHRO 312-0 Human Population Biology** Current theory and research in human biological diversity, focusing on on the impact of ecological and social factors on human biology; how adaptation to environmental stressors promotes human biological variation. Prerequisite: 213.

**ANTHRO 313-0 Anthropological Population Genetics** Principles of population genetics applied to primates. Mathematical models, analyses of small populations, and interaction of social and genetic processes. Prerequisite: consent of instructor.

**ANTHRO 314-0 Human Growth and Development** Integrated biological and cultural perspective on human growth and development from infancy through adolescence; cross-cultural variation in developmental processes and outcomes. Prerequisite: 100- or 200-level anthropology, biology, or psychology course or consent of instructor.

**ANTHRO 315-0 Medical Anthropology** Theories of interactions between culture and biology that affect human health. Beliefs and practices for curing illness and maintaining well-being. Cross-cultural study of infectious and chronic diseases, mental illness, infant/maternal mortality, poverty, and gender. Prerequisite: 100- or 200-level anthropology or sociology course or consent of instructor.

**ANTHRO 317-0 Human Evolution** Fossil record and reconstruction of phylogeny, morphological and behavioral adaptation of early hominids and forebears.

**ANTHRO 320-0 Peoples of Africa** A survey of the cultures of Africa and the significant similarities and differences among the indigenous societies of the continent. Prerequisite: 211.

**ANTHRO 321-0 Archaeological Field Methods** Practical training in basic methods and techniques at an excavation site; given with Summer Archaeology Field School.

**ANTHRO 322-0 Introductory Archaeological Methods** Quantitative and numerical approaches to the description and analysis of patterns in archaeological data, including typology, sequence ordering, and attribute analysis. Prerequisite: 301 or 302 or equivalent.

**ANTHRO 325-0 Archaeological Methods Laboratory** Analysis of archaeological methods (faunal, botanical, artifact, or soil analysis) with various techniques. May be repeated for credit.

**ANTHRO 328-0 The Maya** The archaeology of the Maya in Latin America; life and society in pre-Columbian Maya civilization; history of Maya resistance to colonial and post-colonial domination (e.g., Zapatistas). Prerequisite: 100- or 200-level anthropology, history, or sociology course.

**ANTHRO 329-0 Archaeology of Mesopotamia** The Levant and Mesopotamia, 9000–2400 B.C., from first domestication of plants and animals to earliest village communities and urban civilization in Mesopotamia. Prerequisite: 214 or equivalent.

**ANTHRO 330-0 Peoples of the World** Comparative ethnography of a regionally or historically associated group of cultures or a type of community defined in ecological, ideological, or other terms. May be repeated for credit.

**ANTHRO 332-0 The Anthropology of Reproduction** Marriage and reproduction throughout the world, particularly the developing world and Africa. Conjugal strategies, fertility, contraception.

**ANTHRO 339-0 Material Culture** Relationship between material objects and social life; review of theoretical approaches to gifts and commodities; ethnographic collecting in colonial and postcolonial settings; relationship between culture and aesthetics. Prerequisite: 211 or consent of instructor. **ANTHRO 341-0 Economic Anthropology** Economic organization in small-scale, nonindustrialized communities. Traditional structures of primitive and peasant economies.

**ANTHRO 347-0 Political Anthropology** Cross-cultural study of political organization in stateless and state societies. The state, its origin, and changing role in developing countries.

**ANTHRO 350-0 Anthropology of Religion** The human relationship with the supernatural and action patterns accompanying beliefs. Comparison of nonliterate religions and historical religions.

**ANTHRO 354-0 Gender and Anthropology** Cross-cultural survey of women's roles from three perspectives: biosocial, sociocultural, politicoeconomic. Theory of gender inequality. Emphasis on the third world.

**ANTHRO 360-0 Language and Culture** Relationship between language and culture; language as the vehicle of culture and as the manifestation of thought.

**ANTHRO 361-0 Talk and Social Action** Analysis of talkin-interaction based on examination of audio and video recorded data and associated transcripts. Conversation, action, turn, sequence, relevance, social structure, qualitative methodologies. Prerequisite: 215 or consent of instructor.

**ANTHRO 362-0 Quantitative Methods of Analysis** A broad range of classical statistical methods, univariate and multivariate, currently being applied to anthropological data. Prerequisite: graduate standing or consent of instructor.

ANTHRO 363-0 Language Variation and Change

Introduction to the study of language in its social context, with focus on quantitative sociolinguistics and the frameworks and methods of analysis developed by sociolinguists at work in this area. Prerequisite: consent of instructor.

**ANTHRO 364-0 Pidgins, Creoles, and Language in Contact** Introduction to the study of Pidgin and Creole languages such as Tok Pisin, Bislama, Hawaiian Creole English, Guyanese Creole English, and Haitian Creole. Prerequisite: consent of instructor.

**ANTHRO 370-0 Anthropology in Historical Perspective** Major schools of thought in social, archaeological, and biological anthropology over the last century. Prerequisite: 200-level anthropology course or consent of instructor.

**ANTHRO 372-0 Third World Urbanization** Urbanization processes in the Third World. Spatial development, wage labor, the informal sector, gender relations, rural-urban migration, and global and transnational interactions. Effects of these processes on sociocultural practices. Prerequisite: 100- or 200-level social science course or consent of instructor.

**ANTHRO 373-0 Power and Culture in American Cities** Overview of history and present realities of American urban life, with focus on ethnographic knowledge and stratifications by class, race, ethnicity, gender, nationality, and sexuality. Reconstitution of social and cultural relations, politics, and labor markets by recurrent streams of migration. Prerequisite: 100- or 200-level cultural anthropology or sociology course or consent of instructor.

# ANTHRO 374-0 The Anthropology of Complex

**Organizations** Examination of recent research in organizational ethnography based on investigations in industrial ethnology, the anthropology of work, studies of public-sector bureaucracies, and research in multinational corporations. Prerequisite: 100- or 200-level anthropology or sociology course or consent of instructor.

**ANTHRO 376-0 Socialization** Cross-cultural study of the intergenerational transmission of culture; processes by which social groups pass on social tradition and behavior to succeeding generations. Prerequisite: 211, introductory psychology, or consent of instructor.

**ANTHRO 377-0 Psychological Anthropology** Contemporary approaches to cross-cultural behavior: ecocultural aspects of behavior development through maturation and socialization in human and nonhuman primates. Prerequisite: introductory survey courses in psychology or anthropology, or consent of instructor.

**ANTHRO 378-0 Law and Culture** Introduction to the anthropology of law; institutional knowledge as seen in material culture and legal documents; colonial and post-colonial settings; theoretical approaches to the relationships between law and culture, colonialism, evidence, and globalization. Prerequisite: 200-level course in anthropology or consent of instructor.

**ANTHRO 381-0 North American Prehistory** Intensive study of cultural history of one or more areas of the continent from archaeological evidence.

**ANTHRO 382-0 Households and Everyday Life** The role of households and everyday life in past and present societies throughout the world. Focus on people, gender, social relations, and interpersonal relations. An archaeology course with heavy emphasis on theoretical perspectives from sociology and cultural anthropology. Prerequisite: 100- or 200-level anthropology, history, or sociology course.

**ANTHRO 383-0 Ecological Anthropology** Theory of interactions between organisms and their environments, with application to human populations.

#### ANTHRO 384-0 Introduction to Zooarchaeology

Introduction to the study of animal bones from archaeological sites. Identification, sampling, quantification, hunting economies, domestication, and herding systems in complex societies. Prerequisites: 214; 301 or 302; or consent of instructor.

#### ANTHRO 385-0 The Archaeology of State Societies

Origins and organization of prehistoric state societies. Comparison of political systems, elites, and regional economic organization in Old and New World. Prerequisite: 302 or equivalent.

### ANTHRO 386-0 Methods in Human Biology Research

Laboratory-based introduction to international research in human biology and health; methods for assessing nutritional status, physical activity, growth, cardiovascular health, endocrine and immune function. Prerequisite: 213 or consent of instructor.

**ANTHRO 388-0 Research Design** Introduction to fundamentals of research design; overview of major types of designs, data collection, and analysis strategies; managing and analyzing data from multiple sources. Prerequisite: 362 or consent of instructor.

**ANTHRO 389-0 Ethnographic Methods and Analysis** Descriptive, naturalistic study of the culture of human social groups. Data gathering through observation and interview. Data analysis for ethnographic reporting. Prerequisites: 211 and 215.

**ANTHRO 390-0 Topics in Anthropology** Advanced work in areas of developing interest and special significance. May be repeated for credit with different topic.

# **GEN LA 393-0 Chicago Field Studies Internship** See General Studies.

**ANTHRO 395-0 Field Study in Anthropology** Ethnographic field experience in the United States (e.g., the Southwest) or abroad. Offered in conjunction with summer field schools for exceptional students. Prerequisite: consent of instructor.

**ANTHRO 396-0 Advanced Archaeological Field Methods** Complex excavation and survey procedures, topographic map-making, excavation drawing, soil description; offered in conjunction with the summer Archaeology Field School.

**ANTHRO 396-7 Junior Tutorial** Intensive work on a topic not normally offered.

**ANTHRO 398-0 Senior Seminar** Supervised group discussion of research in preparation of senior thesis. Required of all majors. Prerequisite: 388.

**ANTHRO 399-0 Independent Study** Open with consent of department to juniors and seniors who have completed with distinction at least two quarter-courses or equivalent in anthropology. Under direction of individual members of department.

# **Related Courses in the School of Music**

MUSICOL 323 Proseminar in Ethnomusicology MUSICOL 326-1,2 Music of the World's Peoples

#### **Summer Field Schools**

For additional information, contact the Department of Anthropology.

**Archaeology Field School:** Courses may include 321, 322, 325, and 396, some of which are also offered on the Evanston campus.

Ethnographic Field School in Cultural and Linguistic Anthropology: 395

# Art History

Art history is committed to exploring the historical meaning of art, architecture, and design. It addresses artworks from all places and times and attends to their form, technique, iconography, and historical function. Art history may also be concerned with philosophical aesthetics, artists' lives, art institutions, traditions, and audiences.

Art history offers opportunities to explore and understand the richness and diversity of visual arts from the past and present. It enables students to develop acute visual sensibilities and finely honed skills of critical looking, thinking, speaking, and writing. Art history thus offers students a solid basis for a lifelong appreciation and understanding of art as well as a foundation for further research in other academic and professional disciplines, including history, literature, philosophy, music, politics, and law.

Undergraduate degrees in art history may be antecedent to careers in the arts, education, or business. Art historians with a BA degree may teach in elementary, junior, and high schools. They may find jobs in libraries, art galleries, and auction houses or in journalism, book publishing, public relations, marketing, or advertising. They may elect to pursue professional degrees in architecture, art conservation, law, and medicine or attain MA or PhD degrees in art history itself or other fields of humanistic study.

Careers in museums generally require at least an MA degree. College and university teaching and research careers require the PhD. For additional information about careers in art history, contact the department undergraduate adviser at 847/491-3230 or e-mail art-history @northwestern.edu.

The art history curriculum is developmental and critical. Students are expected to acquire a broad knowledge of world artistic traditions and expertise about particular areas, forms, and practices. They begin in a large class and quickly proceed into smaller classes, seminars, and tutorials. During their first and second years, art history majors are highly dependent upon ideas and information contained in secondary sources; as juniors and seniors, they begin to conduct primary research and acquire the skills to think, criticize, and research on their own.

100-level freshman seminars treat a wide variety of art historical topics from the ancient to modern periods and from Africa to North America. The specific courses vary from year to year and are intended to introduce students to the discipline of art history and help them develop or improve their basic writing and research skills. These courses are not required for art history majors.

200-level courses offer broad introductions to African, American, Latin American, Asian, and European art. They expose students to the richness and variety of visual art throughout history and across the globe. 200-level courses are taught in rotation, usually with at least three of the six subject areas offered annually. The courses consist of three lectures and a single discussion class each week and provide students with the factual and methodological foundation for more advanced courses. Any student wishing to enroll in a 300-level class must have completed at least one course at the 200 level.

300-level courses are the backbone of the curriculum. They provide detailed explorations of important fields and issues in art history, including Gothic art and architecture, the Renaissance, Impressionism, and African American art. Students may choose from a large number of 300-level courses, and class enrollments are limited in order to facilitate discussion. In these classes students discover the special expertise of their professor and are introduced to advanced research in art history.

Undergraduate seminars (390) are available to art history majors only, except with special consent of the faculty. Seminars are limited to 10 students and meet once a week for instruction, discussion, and debate. In these classes majors hone their seeing, speaking, and writing skills and have the opportunity to work both cooperatively and individually. Seminar topics generally reflect the advanced research interests of the professor. Field trips to museums, private collections, and architectural monuments are often integrated into the class. Majors are required to take at least one seminar prior to graduation and may take as many as three.

Independent study (399) outside the academic curriculum can be arranged in exceptional circumstances. In these cases students must get the consent of their academic adviser prior to the term in which they intend to pursue their independent research.

Internships (396) at museums, galleries, or other suitable institutions can often be arranged. Students wishing to take an internship are strongly encouraged first to consult with the undergraduate adviser.

Scholarly resources at Northwestern include the University art collection, housed at the Mary and Leigh Block Museum of Art, and the fine arts collection in Deering Library, both on the Evanston campus. The slide collection in the art history department includes approximately 250,000 slides. Resources in the area include the Art Institute of Chicago, the Terra Museum of American Art, the Chicago Historical Society, the Field Museum, the Museum of Contemporary Art, the David and Alfred Smart Museum and Oriental Institute at the University of Chicago, the Evanston Art Center, and other institutions. Research libraries that students may use with permission include the Ryerson Library at the Art Institute, the Newberry Library in Chicago, and the Regenstein Library at the University of Chicago.

The undergraduate adviser is the key liaison between students and the rest of the faculty, college, and University. Students are encouraged to consult early and often with the adviser, especially prior to each period of registration.

53

#### Major in Art History

#### Departmental courses

- At least 3 200-level courses
- 9 courses at the 300 level, with at least 1 each in (1) ancient-medieval; (2) Renaissance-Baroque;
  (3) modern; and (4) non-Western. The remaining courses are to be distributed at the student's discretion in consultation with the undergraduate adviser but must include at least 1 undergraduate seminar (390).
- 1 art theory and practice course

**Related courses:** At least 4 additional courses from one or more of the following departments or programs with the consent of the undergraduate adviser: anthropology, art theory and practice, classics, comparative literary studies, English, European thought, French and Italian, German, Hispanic studies, history, music history, philosophy, radio/ television/film, religion, Slavic languages and literatures, and women's studies.

## **Minor in Art History**

**Minor course requirements (8 units):** 8 courses, no more than 2 at the 200 level. Of the remaining courses, at least 2 must be in a non-European area.

#### **Honors in Art History**

Students may be nominated for honors in art history after meeting the following prerequisites: completing seminar work including a research paper; achieving a distinguished record in the major, normally a grade point average of 3.5 or above in departmental courses; and completing a senior honors project, usually a senior thesis prepared during one or more quarters of 399 and presented to the departmental honors committee at the end of April in the senior year. For more information, consult the undergraduate adviser. See also Honors under Academic Policies earlier in this section.

# **Courses Primarily for Freshmen and Sophomores**

**ART HIST 220-0 Introduction to African Art** Thematic and historical survey of the major periods of art making in Africa; analysis of a few exemplary works.

**ART HIST 224-0 Introduction to Prehistoric and Archaic Art** Survey of prehistoric (paleolithic, neolithic, megalithic) and ancient (Egyptian, Near Eastern, Mediterranean, Greco-Roman) arts, stressing relations between artifacts and sites and problems of archaeological and anthropological interpretation.

**ART HIST 228-0 Introduction to Pre-Columbian Art** Introduction to Pre-Columbian and Native American art and architecture, from tribal societies such as the Iroquois, Mandan, and Kwakiutl to complex states like the Aztec, Maya, and Inca.

**ART HIST 230-0 Introduction to American Art and Architecture** Urbanism, architecture, and related arts of the Americas from European conquest to the present.

#### ART HIST 235-0 Introduction to Latin American Art

Survey of the work of artists and groups from throughout the various countries of Central and South America from colonial times to the present.

**ART HIST 240-0 Introduction to Asian Art** Art of India, China, and Japan; selected major themes from early devotional imagery in India and the transfer of Indic religions to East Asia; European colonialism and its relationship to the study of Asia.

**ART HIST 250-0 Introduction to European Art** Leading centers and artists of Europe from ancient Greece to the 20th century. Architecture, sculpture, painting, and graphic arts in relation to their social and cultural settings.

### **Courses Primarily for Juniors and Seniors**

**ART HIST 310-1,2 Ancient Art** Painting, sculpture, architecture, and allied arts in the ancient world. **1**. Ancient Egypt and the ancient Near East. **2**. Greek art and architecture beginning with Minoan art and ending with art in the 5th century B.C.

**ART HIST 320-1,2 Medieval Art** Art and architecture in Europe during the Middle Ages. **1.** Early Christian and Byzantine. **2.** Carolingian and Romanesque.

**ART HIST 330-1,2,3 Renaissance Art** Painting, sculpture, and allied arts in Europe from the late Middle Ages through the 16th century. **1.** Italian art from c. 1300 to the sack of Rome (1527). **2.** Italian art from Mannerism to the High Baroque in Rome. **3.** France, Germany, and the Netherlands from the 14th through the 16th centuries.

ART HIST 340-1,2 Baroque Art Painting, sculpture, and allied arts in Europe from the late 16th through the 17th centuries. 1. Art and science in early modern Europe.2. Art in the age of Rembrandt. Prerequisite: 250 or consent of instructor.

ART HIST 350-1,2 19th-Century Art Survey of European painting and sculpture. 1. The late 18th century to 1848.2. 1848–1900.

**ART HIST 360-1,2 20th-Century European Art** The artist and the environment: survey of European painting, sculpture, architecture, and design from the 1890s to the 1960s. **1.** Symbolism to constructivism. **2.** Berlin dada to the situationist international.

**ART HIST 365-1,2 American Art** Survey of the arts and other visual phenomena in the United States, encompassing architecture, painting, sculpture, photography, prints, film, and popular culture. **1.** Colonial times to 1900. **2.** The 20th century.

**ART HIST 366-0 Postmodern Art** Survey of art in the United States since 1945 seen from a global perspective. Prerequisites: 360-1 or -2; 365-1 or -2; or consent of instructor.

**ART HIST 370-0 Modern Architecture** Development of architecture from 1800 to the present.

# ART HIST 378-0 Architecture and Urbanism of the World

**City in the 20th Century** Critical examination of the modern city as a socioeconomic system and the intersection of Western and non-Western urban patterns.

**ART HIST 382-1,2 Chinese Painting** Survey of Chinese painting, 7th–17th centuries. **1.** Visual culture of the Tang and Song dynasties. **2.** Yuan and Ming dynasties.

**ART HIST 384-0 African American Art** Art of the Africandescended cultures of North and South America and the Caribbean.

**ART HIST 386-0 Art of Africa** Thematic and historical survey of the arts and architecture of Africa from the ancient period (Nubian Egypt) to the present.

#### **Special Topics Courses**

**ART HIST 319-0 Special Topics in Ancient Art** Content varies: for example, prehistoric art of Europe, including cave painting and megalithic construction; structuralist and other approaches to anthropological arts; text and image in the ancient world.

**ART HIST 329-0 Special Topics in Medieval Art** Content varies: for example, history of illuminated manuscripts.

**ART HIST 339-0 Special Topics in Renaissance Art** Content varies: for example, the art of Bosch and Brueghel; the history of collecting; the encounter of Old and New World cultures.

**ART HIST 349-0 Special Topics in Baroque Art** Content varies: for example, French art of the 16th and 17th centuries; prints, maps, and books of the Dutch republic.

**ART HIST 359-0 Special Topics in 19th-Century Art** Content varies: for example, the art of Seurat; the spaces of 19th century art; French painting in the south of France.

**ART HIST 367-0 Special Topics in American Art** Content varies: for example, nationalism and internationalism in American art; the myth of America; the artist in American society; elite and popular visual traditions.

**ART HIST 368-0 Special Topics in Modern Art and Performance** Study of the interrelated histories of visual and performance arts in the 20th century. Content varies: for example, American painting and dance; postmodern art and performance from the Judson Church to Pina Bausch.

**ART HIST 369-0 Special Topics in 20th-Century Art** Content varies: for example, American art with a French accent; totalitarian art.

**ART HIST 379-0 Special Topics in Modern Architecture** Content varies: for example, Chicago architecture, including the work of Sullivan and Wright; Beaux-Arts architecture in Europe and America; modernism in architecture; American architecture from Thomas Jefferson to Frank Lloyd Wright.

**ART HIST 389-0 Special Topics in Non-Western Art** Content varies: for example, art and architecture of the ancient Maya; African architecture.

### **Courses Primarily for Majors**

**ART HIST 390-0 Undergraduate Seminar: Theories and Problems of Art History** Content varies: for example, the methods of art history; Impressionism; art at the court of Charlemagne.

**ART HIST 395-0 Museums** Museum studies seminars. The history of museums, their ethical basis, community responsibilities, educational prerogatives, and future directions.

**ART HIST 396-0 Internship in the Arts** Direct participation in the regular activities of an established arts organization in Evanston and elsewhere in the Chicago area, under the supervision of a faculty member. By petition, on a limited basis; may be taken only once.

**ART HIST 399-0 Independent Study** Special projects in art history, involving reading and conferences and culminating in a senior thesis. Required for all majors in art history.

# Art Theory and Practice

The study of art involves the development of skills and techniques plus the stimulation of critical awareness, understanding, and appreciation of the visual arts. Philosophical questions raised in both theory and studio courses help students integrate and enrich their lives and perceptions. Nonmajors and majors share the unique experience offered by this diverse range of courses. Suggested introduction: survey course 270 or 272.

### **Major in Art Theory and Practice**

The major in art theory and practice plans a program of study in consultation with and subject to the approval of a department adviser. Areas of concentration are painting, printmaking, and the teaching of art. Specific requirements in each area are listed below. Qualified students may petition a department committee for exemption from one or more prerequisites.

# Practice of Art — Painting Concentration Departmental courses

*Introductory courses (6):* 120; 124; 125; 270 or 272; any 2 courses chosen from ART HIST 220, 230, 240, 250

*Major courses (8):* 222; 225; 240 or 250-1 or -2; 322-1; 322-2; 325-1 or -2; 331, 332, or 333; and 1 course chosen from those listed below under Art Criticism and the Tradition of Art

**Related courses:** 5 quarter-courses at the 200 or 300 level chosen from one or more of the following departments with the approval of the adviser: anthropology, art history, classics, comparative literary studies, English, French and Italian, German, Hispanic studies, history, music, philosophy, Slavic languages and literatures

# *Practice of Art — Printmaking Concentration* Departmental courses

*Introductory courses (6):* 120; 124; 125; 270 or 272; any 2 courses chosen from ART HIST 220, 230, 240, 250

*Major courses (8):* 222; 225; 325-1 or -2; 331; 332; 333; 1 course chosen from those listed below under Art Criticism and the Tradition of Art; 1 200- or 300-level art history elective

Related courses: Same as for Practice of Art - Painting

### Teaching of Art Concentration

Weinberg College students pursuing a major in art who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

#### Minor in Art and Technology

Art theory and practice majors may complete a minor in art and technology. For details see page 225.

### **Honors in Art Theory and Practice**

Outstanding students may qualify for departmental honors in their senior year by enrolling in two consecutive or interrelated 399 courses in which they complete an approved studio project and related essay under the supervision of department faculty. See Honors under Academic Policies earlier in this section of the catalog.

### **Courses Primarily for Undergraduates**

An asterisk (\*) preceding the course number indicates a lecture course open to all upperclass students and requiring no art skills or background unless otherwise noted.

#### Art Criticism and the Tradition of Art

exhibitions.

\*ART 270-0 Introduction to the Understanding of Art Nonchronological examination of Western art from all periods, emphasizing critical perception of artistic intent and cultural context. Lecture and discussion. Visits to

# \*ART 272-0 Introduction to the Understanding of

**Contemporary Art** Intuitive and artist-oriented approach to some major examples of modern and contemporary art; visual analysis and critical methods. Lecture and discussion.

#### \*ART 372-0 Contemporary Criticism Theoretical and

visual background for the major ideas influencing present art criticism, focus on writing about current exhibitions and interviewing practicing artists. Prerequisite: junior or senior standing.

# Painting and Drawing

**ART 120-0 Basic Painting and Composition** Introduction to watercolor, oil, or acrylic painting techniques. Includes surface preparation, color mixing, composition.

**ART 124-0 Essentials of Design** Principles of visual composition. Color theory; fundamentals of line, shape, texture, and value. Pictorial illusion; symbolic and narrative form. No previous studio experience necessary.

**ART 125-0 Basic Drawing** Problems in line, tonal value, and space. Drawing techniques and application to perception and invention. Relation of drawing to experience. No previous studio experience necessary.

**ART 222-0 Intermediate Painting** Problems in composition and content. Exploration of techniques with oil or acrylic paint. Prerequisite: 120 or acceptable substitute.

**ART 225-0 Intermediate Drawing** Modes of describing form; survey of traditional methods. Various techniques include charcoal, crayon, and ink. Prerequisite: 120, 125, or acceptable substitute.

**ART 322-1,2 Advanced Painting** Problems in form and meaning. Painting concepts and objectives with emphasis on originality and development of skills and perception. Oil or acrylic. Prerequisites: junior or senior standing and 222 or equivalent.

**ART 325-1,2 Advanced Drawing** Studies in light and space in drawing with emphasis on development of drawing disciplines. Problems in form and style in drawing. Prerequisite: 225 or equivalent.

### Photography

**ART 250-1,2 Basic Photography 1.** Extensive darkroom instruction focusing on high-quality processing of blackand-white film prints. Aesthetic problems; mastering techniques; some history. **2.** Further exploration of techniques: zone system, different papers, developers, and archival processing. Historical trends through slide lectures.

**ART 350-0 Photography: History, Concepts, and Ideas** Stylistic trends of contemporary photographic imagery. Photography's position in relation to other art forms. Lectures, lab work, and class discussion. Prerequisite: 250 or equivalent.

**ART 352-0 Color Photography** Techniques and issues of contemporary color photographic process; digital printing. Prerequisite: 250 or equivalent.

#### Printmaking

**ART 331-0 Relief Printmaking** The design and production of prints from wood, linoleum, and plastic surfaces; also collograph and monoprint techniques. Prerequisite: 120, 124, or 125.

**ART 332-0 Intaglio** Printmaking with etching, engraving, aquatint, mezzotint, and drypoint. Prerequisite: 120, 124, or 125.

**ART 333-0 Lithography** Design and production of prints in basic lithographic processes. Prerequisite: 120, 124, or 125.

#### Sculpture

**ART 240-0 Sculpture in Traditional Materials** Formmaking with water clay modeling and plaster casting. Figurative and abstract work.

**ART 340-0 Sculpture in Metal and Plastic** Contemporary methods of metal fabrication with stock materials. Welding, brazing, and instruction in the use of power tools. Pre-requisite: 120, 124, 125, or 240.

**ART 342-0 Process Sculpture and Environmental Art** New sculptural activities, including conceptual sculpture and environmental work. Variety of materials and approaches; collective and individual projects. Prerequisite: 120, 124, 125, or 240.

## **Other Courses**

**ART 390-0 Special Topics in Art** Topics vary: for example, preparation of an art project under the guidance of visiting artists. May be repeated for credit with consent of department. Prerequisite: consent of department.

**ART 399-0 Independent Study** Special projects in the practice of art. Open to qualified seniors.

### Asian American Studies Program

Asian American studies is a vital component of a liberal education, serving to broaden awareness and appreciation of the world, deepen understanding of the multiracial history and character of the United States, and place the American experience within a larger global context. By regarding Asian American experience as fundamental to American society and also linked to the experiences of other racial minorities and migrants in the United States and elsewhere, the program seeks to offer students perspectives that promote responsible participation in a rapidly changing world.

An interdisciplinary program, Asian American studies develops traditional investigative, analytic, and critical skills while also promoting the intellectual and creative powers students need to meet the challenges of the 21st century.

#### **Minor in Asian American Studies**

The minor in Asian American studies gives students the opportunity to pursue a coherent study of Asian American experience. It also lays the foundation for the interdisciplinary study of race, ethnicity, and migration.

Minor course requirements (7 units)

- 5 courses in Asian American studies chosen from the program's approved list, including ENGLISH 275 or HISTORY 214. Courses with significant coverage of Asian American issues may be approved at the discretion of the director. No more than 2 courses may be approved by petition.
- 1 course in Asian studies

- 1 course in a discipline other than Asian American studies that focuses on race and ethnicity. The course should provide conceptual and comparative breadth concerning a topic related to Asian American studies.
- Grades of C- or higher in the above courses.

# Asian Studies Program

The Asian Studies Program accommodates the diverse levels of preparation and interest of students attracted to the study of Asia and Asian peoples. Most 100- and 200level courses as well as many 300-level courses are designed for students with no background in Asian studies. Students may take such courses for elective credit or to meet specific requirements of their programs of study.

#### Adjunct Major in Asian Studies

The adjunct major in Asian studies is taken in conjunction with another major. It requires completion of 11 quartercourses, most offered in discipline-based departments (there is no Asian studies department). Students must choose a concentration and complete 5 courses in that concentration. In most cases, the concentration will focus on one of the four culturally differentiated areas into which Asia is conventionally divided: East Asia, Southeast Asia, South Asia, or West Asia/Middle East. A list of approved courses for the adjunct major is available on the Asian studies Web site.

#### Major in Asian Language and Civilization

This major consists of 17 quarter-courses chosen in consultation with the Asian studies director from the list of approved courses. The student and adviser will identify an appropriate geographic or other focus and typically select at least 4 courses from each of three disciplinary categories: social sciences, history, and humanities. Students will also complete 6 quarter-courses of language study in Arabic, Chinese, Hebrew, Hindi, Japanese, or Korean. (Nativespeaker proficiency does not count for course credit).

Students should see the program director for further information about requirements for the Asian studies majors.

## **Minor in Asian Studies**

Students qualify for a minor in Asian studies by satisfactorily completing 8 quarter-courses chosen in consultation with the director from an approved list of Asianrelated courses. At least 2 quarter-courses must be taken in each of three broad disciplinary categories: social sciences, history, and humanities; 6 such courses will suffice for students who also satisfactorily complete two years of language study in Arabic, Chinese, Hebrew, Hindi, Japanese, or Korean. (Native-speaker proficiency does not count for course credit).

Within the framework of the above requirements, students will normally be expected to organize their programs with emphasis, but not exclusive focus, on one of the main regions or countries of Asia. Students are encouraged to complete at least one quarter of research in their area of interest in the form of an independent study. The Asian studies adviser will help students plan a program to meet their individual needs and interests.

All students applying for minors in Weinberg College must present records that show a minimum of 5 courses not double-counted in their majors. Graduating seniors who have completed the requirements for a minor should request the appropriate application form from the program director.

#### Astronomy

See Physics and Astronomy.

# Biochemistry, Molecular Biology, and Cell Biology

The Department of Biochemistry, Molecular Biology, and Cell Biology does not offer an undergraduate degree. See Biological Sciences, Undergraduate Program in, for a description of the major in biological sciences.

# Biological Sciences, Undergraduate Program in

The science of biology is the study of living organisms at all levels of complexity and in all their diversity. The Undergraduate Program in Biological Sciences draws particularly on two departments: biochemistry, molecular biology, and cell biology (BMBCB) and neurobiology and physiology (NBP). Additional opportunities in life sciences are available for students in a variety of departments: anthropology, biomedical engineering, chemistry, engineering sciences and applied mathematics, geological sciences, psychology, and communication sciences and disorders. The curriculum is intended to maximize students' access to offerings from these departments. The baccalaureate degree offered by Weinberg College through the Undergraduate Program in Biological Sciences is the bachelor of arts with a major in biological sciences. No minor in biological sciences is offered.

# The Study of Biological Sciences

The goal of a baccalaureate degree program in biological sciences at a research university is to develop and enhance the intellectual and creative potential of life sciences students. To this end, the program includes the following components:

- · a foundation in mathematics, chemistry, and physics
- a core curriculum offering an introduction to fundamental areas of biological science
- areas of concentration that subsequently focus students' interests
- opportunities to participate in research through the independent study program

# **Major in Biological Sciences**

Because biology is grounded in the principles of chemistry, mathematics, and physics, all majors must complete the courses listed under related courses below. During the freshman year, students usually complete 100-level chemistry and most or all of the mathematics requirements. In the sophomore year, students start CHEM 210-1 in the fall quarter concurrent with BIOL SCI 210-1. Physics courses should be completed by the end of the junior year.

# **Program courses**

*Core Curriculum:* To set the stage for study in biological sciences at the advanced level, each major must complete BIOL SCI 210-1,2,3. These three courses taken in sequence address the central topics in contemporary biology with the goal of preparing students for further study in either the biological sciences or professional school. In this sequence students are presented with a series of questions: What is the hypothesis? the concept? the principle? Finally, and very important: How do we test the hypothesis experimentally? To this end, the 200-level core curriculum is augmented by a complementary laboratory sequence that provides biology students with an appreciation of the discipline as an experimental science.

*Areas of Concentration:* The continuing expansion of knowledge in biology makes it difficult to master all areas in a four-year curriculum. Thus, the junior and senior years are designed to permit students to explore a focused area in the biological sciences that builds on the principles of the 200-level core curriculum. To provide a variety of coherent pathways, six areas of concentration have been designed. In addition to the five courses specifically required for each concentration, each student must take three 300-level life science elective courses approved by the adviser. The concentration will be noted on the transcript; only one concentration can be noted. Following are the six concentrations and a summary of their requirements.

# Biochemistry

- 309 Principles of Biochemistry
- 315 Cell Biology
- 321 Physical Biochemistry
- 361 Protein Structure and Function
- 354 Biochemistry Laboratory

# **Related courses**

All majors must complete the following foundational courses:

- CHEM 101, 102, and 103 or 171 and 172
- CHEM 210-1,2 or 212-1,2
- MATH 214-1,2 and either 214-3 or a statistics course
- PHYSICS 130-1,2,3 or 135-1,2,3

#### Advising

Sophomores who declare a major in biological sciences are assigned to a specific faculty adviser. Juniors and seniors involved in independent study (399) also have a specific research adviser.

#### Research/Independent Study/Honors Program

This program offers students the unique opportunity to work on a research project in a faculty member's laboratory. It is recommended for all students who may wish to consider a career involving research. Students who have completed at least five quarters of course work and have attained a grade point average of 3.0 or higher in science and mathematics courses are eligible to apply for 399. A directory of research-training faculty is available at the Undergraduate Program in Biological Sciences (UPBS) office. At least two weeks before the registration period for the quarter in which students begin a 399, an application form for independent study should be obtained from the UPBS office. Students visit the faculty members whose research areas are of interest and explore with them the possibility of doing research in their laboratories. By mutual agreement, a plan of study is proposed; the application/ proposal is signed by the student and the faculty member. The student brings the completed, signed application to the UPBS office and receives a course authorization number and a quarterly summary report that must be completed and returned to the UPBS office at the end of each quarter

of 399. A biological sciences major's first two quarters of independent study are graded on the P/N option.

Students engaged in 399 research are encouraged to submit a senior thesis proposal by the beginning of their senior year. A faculty committee evaluates each proposal and either recommends or does not recommend that the student should proceed with the writing of a senior thesis. Students complete the laboratory work, data analysis, and writing of the thesis (literature survey, materials and methods, results, discussion) according to an established timetable.

Satisfactory completion of the thesis allows the faculty committee to recommend students for program honors and makes them eligible to compete for one of three awards given yearly for superior honors research. Completion of a senior thesis in the spring quarter enables students to use the spring quarter 399 as a 300-level elective toward the major. Additionally, prior participation in 399 for two quarters is mandatory for the spring quarter of 399 to count as a 300-level elective. In general, a research project leading to honors cannot be pursued outside 399 in a paid or unpaid job. The only exceptions are cases in which a student's supervisor is a participant in the UPBS honors program and an appropriate research/study plan has been approved by the honors coordinator. See Honors under Academic Policies earlier in this section of the catalog.

#### **Biological Sciences Second Major for ISP Students**

The Integrated Science Program (ISP) is a highly selective BA program in Weinberg College (see Integrated Science Program). Students majoring in ISP who wish to complete a second major in biological sciences should fulfill the following requirements instead of those listed above. They may not substitute ISP 398 for any biological sciences or chemistry course in the ISP curriculum and must take the following additional courses:

- CHEM 212-2
- An appropriate laboratory course for the chosen concentration. (If the lab course is waived due to 399 or other research experience, another 300-level biological sciences course must be taken in its place.)
- 2 additional courses, as specified below for the indicated concentration:

Genetics and molecular biology: BIOL SCI 390 and 395 Biochemistry: BIOL SCI 321 and 361 Evolutionary biology: BIOL SCI 341 and GEOL SCI 317 Neurobiology: BIOL SCI 304 and 306 Physiology: BIOL SCI 325 and 356 Human biology: BIOL SCI 327 and ANTHRO 306

#### Honors Program in Medical Education

300-level biological sciences course requirements for students also in the HPME Program consist of four core courses appropriate for each of the five department concentrations (not including the lab course, which constitutes an HPME waiver), plus three 300-level electives.

# Premedical, Predental, and Preveterinary Students Majoring in Other Departments

Biological sciences requirements for most U.S. schools offering degrees in medicine, dentistry, and veterinary medicine are satisfied by either 110-1,2,3 or 210-1,2,3. Students with these career objectives usually begin such a sequence in their second year.

### The Teaching of Biological Sciences

Weinberg College students pursuing a major in biological sciences who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

# **Courses Primarily for Undergraduates**

### BIOL SCI 101-0 Biology in the Information Age

Fundamentals of the scientific process, using current events as illustrations. Choice of term project or tutorial.

**BIOL SCI 102-0 Human Abilities** How technology, biology, and psychology interface to determine neuropsychological performance.

**BIOL SCI 103-0 Diversity of Life** Comparative survey of organisms, emphasizing adaptation and phylogenetic relationships. No credit while or after taking any part of the 210-1,2,3 sequence.

**BIOL SCI 110-1 Biology: Genetics and Evolution** Principles of genetics and evolution and their application. Laboratory. No prerequisite, but CHEM 101 recommended.

**BIOL SCI 110-2 Biology: Molecular and Biochemical Biology** How genes direct synthesis of proteins; biochemistry. Laboratory. Prerequisite: 110-1. No credit while or after taking 210-2 or 210-3.

# BIOL SCI 110-3 Biology: Physiology and Cell Biology

How cells and tissues function. Laboratory. Prerequisite: 110-2. No credit while or after taking 210-2 or -3.

# BIOL SCI 112-0 Biotechnology and Society

Examination of modern biotechnology and its interaction with human society.

**BIOL SCI 124-0 Biological Clocks** Daily and annual biological rhythms, their mechanisms, and their effects on health, performance, and society. No credit while or after taking any part of the 210-1,2,3 sequence.

**BIOL SCI 160-0 Human Reproduction** Basic biology of reproduction; relation between hormones, emotions, intelligence, and behavior; related policy issues. No credit while or after taking any part of the 210-1,2,3 sequence.

**BIOL SCI 164-0 Genetics** Principles of inheritance. No credit while or after taking any part of the 210-1,2,3 sequence.

**BIOL SCI 204-0 Environmental Biology** Underlying biological principles necessary to make informed decisions about environmental issues. Prerequisites: 164 or 210-1; 1 course in statistics recommended.

**BIOL SCI 210-1 Genetics and Evolutionary Biology** Transmission and demic genetics; evolutionary biology. Laboratory. Prerequisites: MATH 214-1,2; CHEM 101, 102, and 103 *or* 171 and 172.

**BIOL SCI 210-2 Biochemistry and Molecular Biology** Biochemical and molecular biology. Laboratory. Prerequisites: 210-1; CHEM 210-1; concurrent registration in CHEM 210-2.

**BIOL SCI 210-3 Physiology and Cell Biology** Cell biology and physiology. Laboratory. Prerequisite: 210-2.

**BIOL SCI 212-1 ISP Biochemistry** Synthesis and metabolism of organic molecules; structure and function of proteins. Laboratory. Prerequisite: CHEM 212-1.

# BIOL SCI 212-2 ISP Cell Biology and Genetics

Transmission genetics, genetic code, transcription, translation, regulation of gene expression. Prerequisite: 212-1.

**BIOL SCI 301-0 Biochemistry** Metabolism, energetics, and control mechanisms. Prerequisites: 210-1,2,3; CHEM 210-2. Credit not allowed for both 301 and 309.

**BIOL SCI 302-0 Fundamentals of Neurobiology** Cellular and biochemical approaches to the nervous system, focusing on neuron structure and function. Prerequisites: 210-3, PHYSICS 130-2.

**BIOL SCI 303-0 Molecular Neurobiology** Mechanisms of signal transduction and synaptic plasticity; basic neuro-chemistry. Prerequisites: 210-3, 302.

**BIOL SCI 304-0 Developmental Neurobiology** Cellular aspects of nervous system development; relationship between structure and function. Prerequisites: 210-3, 302.

**BIOL SCI 305-0 Neurobiology Laboratory** Hands-on experience in the performance of classical experiments in cellular neurophysiology. Prerequisite: 302 strongly recommended.

**BIOL SCI 306-0 Central Nervous System Physiology** Integrative approach toward understanding functioning of mammalian central nervous system. Prerequisite: 210-3.

**BIOL SCI 309-0 Principles of Biochemistry** Biochemistry with focus on macromolecular structure and function. Prerequisites: 210-1,2,3, CHEM 210-1,2. Credit not allowed for both 301 and 309.

**BIOL SCI 310-0 ISP Quantitative Biochemistry and Molecular Biology** Protein interaction with small molecules; protein tertiary structure determination. Prerequisite: 212-1.

**BIOL SCI 311-0 ISP Neurobiology** Detailed look at membrane properties of single neurons and synaptic transmission. Prerequisites: 212-1,2.

**BIOL SCI 314-0 Mind and Brain** Neural transmission; how neural dysfunction can translate into cognitive abnormality. Prerequisite: 110-3 or 210-3.

**BIOL SCI 315-0 Cell Biology** Relationship of shape, structural dynamics, and function with the cellular state and gene expression; cell-to-cell communication. Prerequisite: 210-3.

**BIOL SCI 319-0 Biology of Animal Viruses** Virus structure, synthesis of viral nucleic acids and proteins, the interaction of the viral and cellular genomes. Prerequisite: 210-3.

**BIOL SCI 320-0 Behavioral Ecology Seminar** Evolutionary study of animal behavior, emphasizing theory but using field data to test or illustrate aspects of theory. Prerequisite: 210-1.

**BIOL SCI 321-0 Physical Biochemistry** Thermodynamic laws, diffusion, chemical equilibria, kinetics, and statistical thermodynamics. Prerequisites: 210-1,2,3; CHEM 103 or 172; MATH 214-2; PHYSICS 130-1 or 135-1.

**BIOL SCI 323-0 Bioinformatics** Utilization of informational and modeling techniques to explore evolutionary and other problems related to the genome. Prerequisites: 210-1,2,3 and a course in statistics.

**BIOL SCI 324-0 Neurobiology of Biological Clocks** Daily and circadian biological clocks: research regarding their causation and adaptive significance. Prerequisites: 110-1,2,3 or 210-1,2,3.

**BIOL SCI 325-0 Animal Physiology** Physiological principles and mechanisms responsible for the ability of animals to regulate variables in the steady state. Prerequisite: 210-3.

**BIOL SCI 326-0 Neurobiology of Learning and Memory** Molecular and neural bases. Prerequisite: 302.

**BIOL SCI 327-0 Biology of Aging** Biological aspects of aging, from molecular to evolutionary. Prerequisites: 210-1,2,3.

**BIOL SCI 333-0 Microbial Cell and Molecular Biology** Structure, growth, metabolism, and genetics of prokaryotes. Computer-based analyses. Prerequisite: 210-3.

**BIOL SCI 340-0 Biological Aspects of Disease** Cellular response to injury; inflammation and immunity; genetic basis of disease; developmental pathology. Prerequisite: 210-3.

**BIOL SCI 341-0 Population Genetics** Processes that affect allele frequency change and cause evolution. Prerequisites: 210-1,2,3.

**BIOL SCI 343-0 Phylogenetics** Current concepts of evolutionary biology as background for an understanding of systematics and phylogeny reconstruction. Prerequisite: 210-1.

**BIOL SCI 344-0 Morphology of Vertebrates Laboratory** Vertebrate phylogeny illustrated via comparative morphology; anatomical/functional considerations. Prerequisite: 210-1.

**BIOL SCI 345-0 Topics in Evolutionary Biology** Topics vary, but always deal with the biology of a major group

of organisms. Laboratory. May be repeated for credit with different topic. Prerequisites: 210-1,2.

**BIOL SCI 346-0 Field Ecology** An intensive experience in field ecological research. Prerequisites: 164, 204, or 210-1; STAT 202, 206, 210, or MATH 214-3.

**BIOL SCI 347-0 Conservation Biology** Evolution, ecology, and conservation of patterns of biological diversity. Pre-requisites: 164, 204, or 210-1; STAT 202, 206, 210, or MATH 214-3.

**BIOL SCI 353-0 Molecular Biology Laboratory** Projectbased approach to learning lab skills in eukaryotic molecular biology. Prerequisites: 210-1,2,3.

**BIOL SCI 354-0 Biochemistry Laboratory** Biochemical experimentation. Prerequisites: 210-1,2,3.

**BIOL SCI 355-0 Immunobiology** Nature of host resistance; characteristics of antigens, antibodies; basis of immune response; hypersensitivity. Prerequisite: 210-3.

**BIOL SCI 356-0 Vertebrate Endocrinology** Physiology and biochemistry of hormones and glands of internal secretion in vertebrates; endocrine glands. Prerequisite: 210-3.

**BIOL SCI 358-0 Physiology Laboratory** Experiments in several systems. Design, techniques, data analysis, and report writing emphasized. Prerequisites: 210-1,2,3; 325.

**BIOL SCI 360-0 Biophysics of Living Organisms** Physical principles involved in functions of living organisms. Prerequisites: 210-3, PHYSICS 130-1,2, MATH 214-1,2.

**BIOL SCI 361-0 Protein Structure and Function** Structure and function of proteins; X-ray crystallography and NMR. Prerequisites: 301 or 309; PHYSICS 130-1,2,3 or 135-1,2,3.

**BIOL SCI 362-0 Molecular Machines** Biophysics of macromolecular assemblies, organelles, and cells. Prerequisites: 301 or 309; PHYSICS 130-1,2,3 or 135-1,2,3.

**BIOL SCI 377-0 Sensory Neurobiology** Physiological process in sensory receptor cells; chemical senses, vision, hearing, and lateral line organs. Prerequisite: 210-3.

**BIOL SCI 378 Functional Genomics** Patterns of gene expression and their causes. Prerequisites: 210-1,2,3.

**BIOL SCI 389-0 Biology of Reproduction Seminar** Molecular aspects of gametogenesis and fertilization; signal transduction/receptors involved in fertilization. Prerequisites: 210-3 and consent of instructor.

**BIOL SCI 390-0 Molecular Biology** Nucleic acid structure; DNA mutation, repair, recombination, replication, restriction, and modification; translation. Prerequisite: 210-3.

**BIOL SCI 392-0 Developmental Biology Laboratory** From gametogenesis to the differentiation of specialized cell types. Prerequisite: 210-3.

**BIOL SCI 393-0 Molecular Biology of Human Disease Seminar** Use of molecular biology to elucidate contemporary problems in biomedical research. Prerequisites: 210-3, 301, 315, 390. **BIOL SCI 395-0 Molecular Genetics** How molecular genetics is used to study biological problems. Prerequisite: 390.

# BIOL SCI 398-0 Undergraduate Research Seminar

Advanced work for superior students through supervised reading, research, and discussion. Prerequisite: consent of program.

**BIOL SCI 399-0 Independent Research** Supervised individual research open only to juniors and seniors meeting specified requirements. Prerequisite: consent of program.

### **Business Institutions Program**

The Program in Business Institutions approaches the study of business through a thoughtful investigation of the cultural, political, philosophical, literary, and social consequences of business institutions. Therefore, business institutions is not intended to constitute a narrowly conceived preprofessional training or to function as a business concentration within any single departmental major. This program is instead conceived as a means to a broad multidisciplinary perspective on a significant area of inquiry in late 20th-century society. Students who wish to pursue the minor in business institutions should be open to inquiries grounded in the intellectual approaches of many disciplines.

#### **Minor in Business Institutions**

The minor in business institutions requires the successful completion with a grade of C– or above of eight courses: three required core courses and five elective courses. The program director may approve a course offered in a particular year as a substitution for an elective course when the syllabus demonstrates a business institutions emphasis.

Students interested in the minor in business institutions should consult with a program adviser. Information is available in the Weinberg College Office of Studies and the program office, University Hall, room 001. Students applying for the minor in business institutions must present records showing a minimum of five courses not doublecounted in their major. Grades of P/N are not accepted.

#### Minor course requirements (8 units)

### Core courses

- ECON 201 and 202 (which together count as 1 business institutions core requirement) or ECON 310-1
- ECON 250 or 350 or POLI SCI 375

SOCIOL 302

*Electives:* 5 courses chosen from ANTHRO 341 BUS INST 239, 390, 392, 394 ECON 260, 305, 307, 308, 309, 323-1,2, 339, 349, 350, 355 HISTORY 367, 391 PHIL 260 POLI SCI 361, 371, 372 SOCIOL 215, 312, 315, 331, 332, 335

#### Courses

**BUS INST 239-0 Marketing Management** Basic principles and applications of marketing management; market segmentation, target marketing, brand positioning; survey of market research and consumer behavior; marketing of services, nonprofits, the arts.

**BUS INST 390-0 Special Topics in Business Institutions** Investigation of topics of current interest to faculty and students.

### **BUS INST 392-0 Business Institutions Program**

**Internship Seminar** Allows students to relate scholarship concerning an aspect of corporate culture to experience gained from a previously completed summer internship. Prerequisite: consent of department.

**BUS INST 394-0 Linkage Seminar** Content varies. Possible topics include management in a cross-cultural environment and contemporary issues in public relations.

### Chemistry

Chemistry is the study of molecular structure, chemical reactions, and the molecular basis of solids, liquids, and gases. The broad applicability of phenomena and rigorous methodology of chemistry provide a wide range of career options for chemistry majors. Training in chemistry blends descriptive, conceptual, and mathematical elements in both lectures and laboratory work. While developing chemical knowledge is essential, the progressive honing of analytical abilities is equally important.

The chemistry department offers courses carefully designed to provide a rigorous introduction to chemistry for science or nonscience students. Additional courses provide several chemistry program options and serve the needs of Northwestern's engineering, biological sciences, and medical programs. The chemistry faculty conducts vigorous, original research that includes undergraduates, graduate students, and visiting scholars from around the world. This environment, i.e., modern instrumentation, seminars, colloquia, and informal contacts, invigorates the educational process and provides exciting opportunities for undergraduates.

The department offers programs to meet the needs of students with diverse career objectives, including professional chemistry, medicine, and teaching.

#### **Major in Chemistry**

The major is recommended for students planning careers in chemistry. It is suitable preparation for graduate study in chemistry or medical school and for those seeking positions as professional chemists. Only this program qualifies students for certification as a professional chemist by the American Chemical Society.

**Departmental courses:** 101; 102; 103 or 171; 172; 210-1,2,3 or 212-1,2,3; 215; 329; 333; 335; 342-1,2,3; 345; 361

**Related courses:** MATH 214-1,2,3 and 215 (the accelerated mathematics courses 290-1,2 or 291-1,2 also satisfy this requirement); PHYSICS 125-1,2,3 or 135-1,2,3

# Chemistry Program with Biochemistry Emphasis

This program is designed for students who wish to emphasize the biochemical aspects of chemistry. For example, this program is suitable preparation for medical school or for advanced study in fields that require a strong background in chemistry. Three courses from the regular chemistry program (335; 361; 215 or 345) are replaced by BIOL SCI 210-1,2 and one of the following: CHEM 397, 414; BIOL SCI 301, 354, 390.

#### **Minor in Chemistry**

The minor in chemistry allows majors in other fields to complete a significant portion of the course work required for a chemistry major. It permits the flexible selection of course work from the traditional subdisciplines of organic, inorganic, physical, and analytical chemistry.

Minors must obtain consent from the department to register in 212-1,2,3; 215; and 335. Majors have priority for registration in these courses, which may have limited enrollments, and in 399.

**Basic courses:** 103 or 172 or equivalent (300-level chemistry courses have additional chemistry, physics, and mathematics prerequisites)

**Minor course requirements (6 units):** 6 200- or 300level chemistry courses (exclusive of 201, 204, and 399) **Sample programs:** Life science majors and premedical students are advised to take 210-1,2,3 or 212-1,2,3; 343; and 2 additional courses. Physical science majors should take 342-1,2,3; 345; and 2 additional courses. Students with interests in materials science, geological science, environmental science, or chemical engineering should take 210-1,2; 335; 343; and 2 additional courses. Other programs for the minor can be designed to suit the needs of individual students.

#### Four-Year BA/MS

Students who have done outstanding work during their first three years and who have a professional interest in chemistry or biochemistry are eligible to apply for the four-year BA/MS program. Applications should be made during the spring quarter of the junior year. By the end of three years, the applicant should have completed all the 300-level chemistry courses, all or nearly all Weinberg College requirements, and one quarter of independent study. To fulfill the MS requirements, students must take nine graduate courses, including four chemistry courses selected from a list approved by the department and at least units units of independent study. None of these nine courses may be used to fulfill any specific undergraduate Weinberg College or major course requirement. See Four-Year Master's Programs in the Undergraduate Education section of this catalog and consult a department adviser.

### **Chemistry Second Major for ISP Students**

The Integrated Science Program (ISP) is a highly selective BA program in Weinberg College (see Integrated Science Program). Students majoring in ISP who wish to complete a second major in chemistry must take the courses listed under one of the following options.

Chemistry option: 212-1,2,3; 215; 329; 333; 335; 345; 361 Biochemistry option: 212-1,2,3; 215 or 345; 329; 333 (ISP 398 may not be substituted for BIOL SCI 301, 310) Program in the teaching of chemistry: 212-1,2; 329; 333; 3 200- or 300-level chemistry electives

# **Honors in Chemistry**

Seniors who have done outstanding work in the classroom and research laboratory are eligible for graduation with honors in chemistry. A student who is recommended must have completed the sequence of courses required by the department with a grade point average of 3.3 or above in chemistry and at least two quarters of either 398 or 399, during which the student was engaged in original research. A written report of research activities along with a strong recommendation from the student's research adviser is also necessary. For more information consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

### The Teaching of Chemistry

Weinberg College students pursuing a major in chemistry who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

# Advanced Placement

Entering students seeking advanced placement will be advised to register for 171, 210, or 212 according to their score on either the College Board Advanced Placement chemistry examination or the department chemistry placement examination.

# **Courses Primarily for Freshmen and Sophomores**

**CHEM 101-0 General Chemistry** Descriptive chemistry, elements and compounds; basic chemical calculations, mole problems, stoichiometry, and solution concentrations; gas laws; thermochemistry; quantum theory and electronic structure of atoms; periodic properties of the elements; nuclear chemistry; chemical bonding. With laboratory.

**CHEM 102-0 General Inorganic Chemistry** Descriptive chemistry, inorganic reactions; chemical bonding; condensed phases; introduction to chemical equilibria; phase equilibria; solutions and colligative properties; metal complexes. With laboratory. Prerequisite: 101 (C- or better) or consent of department.

63

**CHEM 103-0 General Physical Chemistry** Chemical equilibrium; equilibria in aqueous solution, thermodynamics; chemical kinetics; electrochemistry and oxidation-reduction reactions; solid-state chemistry; industrial chemical processes. With laboratory. A grade of C- or better in 103 required to enroll for any higher-level chemistry course. Prerequisites: 102 (C- or better) or consent of department; MATH 214-1.

### CHEM 171-0 Accelerated General Inorganic Chemistry

Review of mole problems and stoichiometry; descriptive chemistry, elements, compounds, and inorganic reactions; gas laws; phase equilibria and colligative properties; chemical equilibrium; aqueous equilibria; topics in chemical bonding and molecular structure. With laboratory. Prerequisite: placement by the department through department placement exam.

#### **CHEM 172-0 Accelerated General Physical Chemistry**

Thermodynamics and equilibrium; chemical kinetics and mechanism; electrochemistry; electronic structure of the atom and quantum theory; advanced topics in chemical bonding; coordination compounds; solid-state chemistry; nuclear chemistry. With laboratory. Prerequisites: 171 (C– or better); MATH 214-1.

**CHEM 201-0 Chemistry of Nature and Culture** Chemistry for the nonscientist. Chemicals commonly encountered in everyday life. With laboratory.

**CHEM 204-0 Environmental Chemistry** The chemistry of the environment. Air, water, and soil; effects of pollution, heating, nuclear emissions, toxicity, and remediation. With laboratory. Primarily for environmental science majors but open to all qualified students. Prerequisites: 101, 102, 103 or 171, 172.

**CHEM 210-1,2,3 Organic Chemistry 1.** Basic concepts of structure, stereochemistry, and reactivity of organic compounds. The chemistry of hydrocarbons and alcohols. No P/N registration. Prerequisite: 103 or 172 (C- or better). **2.** The chemistry of aromatic, carbonyl, and nitrogen compounds; characterization of organic substances by chemical and spectral methods; reaction mechanisms. With laboratory. No P/N registration. Prerequisite: 210-1 (C- or better). **3.** The chemistry of polyfunctional compounds of biological and medicinal interest. Modern organic synthesis, bioorganic chemistry, and recent developments in organic chemistry. With laboratory. No P/N registration. Prerequisite: 210-2 (C- or better).

**CHEM 212-1,2,3 Organic Chemistry** Primarily for chemistry majors and students in ISP. Similar to 210-1,2,3 except with laboratory in the first and second quarters. No P/N registration. Prerequisites: 103 or 172 (C- or better) and consent of department, enrollment in ISP, or department placement.

**CHEM 215-0 Organic Synthesis Laboratory** A laboratory course in modern methods of synthesis, separation, and spectroscopic characterization of organic compounds. Included are organization, access, and use of chemical

information. Prerequisite: 210-3 or 212-3 (students may take 212-3 concurrently).

# Courses Primarily for Juniors and Seniors CHEM 329-0 Analytical Chemistry with Laboratory

Principles and applications of analytical methods with emphasis on chromatography and electrochemistry. With laboratory. No P/N registration. Prerequisites: 342-1, 342-2, or 343 (students may take 343 concurrently).

**CHEM 333-0 Inorganic Chemistry** Descriptive chemistry of some important elements. Current concepts and models of chemical bonding. Prerequisites: two units of 200- or 300-level chemistry.

**CHEM 335-0 Inorganic Synthesis Laboratory** Laboratory course in modern methods synthesis, separation, and spectroscopic characterization of inorganic compounds. Introduction to current topics in inorganic chemical research. Prerequisites: 212-3 or 210-3, 333 (students may take 333 concurrently).

**CHEM 342-1 Thermodynamics** Laws of applications of thermodynamics. Thermochemistry, chemical potentials, solution thermodynamics, nonideal gases. Prerequisites: 103 or 172 (C or better); MATH 214-3; PHYSICS 135-1,2 (students may take PHYSICS 135-2 concurrently).

**CHEM 342-2 Quantum Mechanics and Spectroscopy** Quantum mechanics with emphasis on atomic and molecular electronic structure. Electronic, vibrational, rotational, and magnetic resonance spectroscopy. Prerequisites: MATH 214-3 (215 recommended); PHYSICS 135-1,2.

**CHEM 342-3 Kinetics and Statistical Thermodynamics** Chemical kinetics, including experimental techniques and theories of rate processes. Statistical mechanics, including Boltzmann distribution, partition functions, and applications to thermodynamics. Prerequisites: 342-1,2.

**CHEM 343-0 Kinetics and Spectroscopy** Chemical kinetics, including experimental techniques and elementary theory. Ultraviolet, visible, infrared, and magnetic resonance spectroscopy. For nonmajors. Prerequisites: 342-1 or PHYSICS 135-1,2; MATH 214-3.

**CHEM 345-0 Spectroscopy Laboratory** Experiments on modern spectroscopic methods and data analysis. Prerequisite: 342-2 (students may take 342-2 concurrently).

**CHEM 348-0 Physical Chemistry for ISP** Gas laws and properties; kinetic theory; first, second, and third laws; phase equilibria; mixtures, phase diagrams, statistical thermodynamics, kinetics. Prerequisites: ISP enrollment; 172; MATH 291-1,2,3; or consent of department.

**CHEM 361-0 Advanced Laboratory** Advanced laboratory in analytical and physical chemistry. Prerequisites: 329; 342-1,2; 345.

**CHEM 380-0 Cooperative Chemistry Education** Participation in approved industrial work experience away from the campus. No credit; no tuition. Prerequisite: consent of department.

# CHEM 397-0 Medicinal Chemistry: The Organic

**Chemistry of Drug Design and Action** Introduction to principles of drug design and mechanisms of drug action from a chemical viewpoint. Historical introduction, drug design and development, receptors, enzymes and enzyme inhibitors, DNA, drug metabolism, and prodrugs. Prerequisites: 210-3, 212-3, or consent of instructor.

**CHEM 398-0 Undergraduate Seminar** Advanced work for superior students through supervised reading, research, and discussion. Prerequisite: consent of department. **CHEM 399-0 Independent Study** Faculty-directed

research. Prerequisite: consent of department.

### Classics

Classics is the multidisciplinary study of Greek and Roman civilization. The chief purpose of the undergraduate programs is to elucidate the classical foundations of our culture and to sharpen the abilities that grow from the study of the classical languages, literature, and history. The department also offers MA and PhD programs that prepare scholars for a career in teaching and research.

The classics programs at Northwestern are strong in history and literature. Complemented by resources in the Department of Philosophy, the department also is well qualified to offer undergraduate and graduate programs in Greek philosophy. A major commitment to classical studies is evident in the holdings of University Library, which provides extensive research opportunities to classics undergraduate and graduate students.

The Department of Classics offers a major in classics and minor concentrations in Latin and Greek. Additional information about classics programs and courses is on the department's Web site at www2.mmlc.northwestern .edu/classics/ or available on request from the department office.

### **Major in Classics**

The major in classics, with concentration in Latin or Greek, provides broad instruction in the thought, literature, and languages of classical antiquity. Requirements for the major can be satisfied in 17 or 18 courses — 6 basic courses and 11 or 12 elective courses, the latter including classics courses with readings in the original languages (Latin and/or Greek), courses with readings in English, and, subject to approval, related courses from other departments (philosophy, political science, history, art history, comparative literary studies, gender studies, etc.). No previous knowledge of Latin or Greek is required to complete a classics major. Students may declare a classics major at any time during their freshman year, at the beginning of their sophomore year, or, under special circumstances, at later stages in their undergraduate careers.

Prerequisites for classics majors are the three-quarter sequence LATIN 101-1,2,3 or GREEK 101-1,2,3. Students

may take a qualifying examination at any time that may, at the discretion of the department, exempt them from 1, 2, or all 3 courses in the sequence.

### Departmental courses

*Basic courses:* LATIN 201-1,2,3 or GREEK 201-1,2,3; CLASSICS 210, 211, 212

#### Elective courses:

• Students may select one of two options:

Option A: 5 300-level Latin or Greek courses in any combination

Option B: 3 300-level courses in one language and 3 at any level in the other. The latter may include courses from the three-quarter LATIN 101 or GREEK 101 sequences or any 200- or 300-level courses.

Students who have passed a qualifying examination in one language may take a qualifying examination in the second classical language at any time, which may, at the discretion of the department, exempt them from the 101-1 and/or 101-2 courses in that language and allow the exemption(s) to count towards credit in their major course.

Subject to instructor approval, students may be allowed to take 300-level courses for credit before having completed the LATIN 201 and/or GREEK 201 course sequences.

- 3 200-level classics courses with readings in English. (With consent of the department, related 200-level courses from other departments may be used to fulfill this requirement.)
- 3 300-level classics courses with readings in English. (With consent of the department, related 300-level courses from other departments may be used to fulfill this requirement.)

Many 300-level courses are given in dual mode, with readings in either the original Latin or Greek or in English. Classics majors may select courses in either mode.

#### **Minor Concentrations in Classics**

The minor concentrations in either Latin or Greek consist of basic language courses (some of which may be waived if the student passes a qualifying examination) and three approved 300-level classics courses. No previous knowledge of Latin or Greek is required. Students may declare a minor in classics at any time during their freshman or sophomore year or at the beginning of their junior year. Under special circumstances students may also declare a minor in classics at a later stage of their undergraduate careers.

Students who have passed a qualifying examination in one language may take a qualifying examination in the second classical language at any time, which may, at the discretion of the department, exempt them from the 101-1 and/or 101-2 courses in that language and allow the exemption(s) to count toward requirements for the minor.

Many 300-level courses are given in dual mode, with readings in either the original Latin or Greek or in English. Classics minors may select courses in either mode.

#### Latin

**Prerequisites:** LATIN 101-1,2,3. (Students who pass a qualifying examination may be granted exemption from 1 or more courses in this sequence at the discretion of the department.)

# Minor course requirements (6 units)

• LATIN 201-1,2,3

• 3 300-level classics courses with readings in either Latin or English

#### Greek

**Prerequisites:** GREEK 101-1,2,3. (Students who pass a qualifying examination may be granted exemption from 1 or more courses in this sequence at the discretion of the department.)

#### Minor course requirements (6 units)

• GREEK 201-1,2,3

 3 300-level classics courses with readings in either Greek or English

#### Study Abroad

Qualified majors have the opportunity to attend the Intercollegiate Center for Classical Studies at Rome during their junior or senior year. Students interested in this program or similar opportunities in Greece should consult the department chair or an adviser in the Study Abroad Office.

# Four-Year BA/MA

Students with a strong background may apply for a twodegree program that can be completed in four years. This is ideal for students interested in continued graduate studies in any of several fields. It also serves to prepare highly qualified secondary school teachers of classics, for whom there is a renewed demand. See Four-Year Master's Programs in the Undergraduate Education section of this catalog and consult a department adviser.

#### **Honors in Classics**

Outstanding seniors in classics are encouraged to prepare an honors thesis based on two or more quarters of 399 Independent Study. Successful completion of this project entitles the candidate to nomination for honors in classics. For more information, consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

#### The Teaching of Latin

Weinberg College students pursuing a major in classics who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

# **Courses in Latin**

**LATIN 101-1,2,3 Elementary Latin** Classical Latin vocabulary, grammar, and syntax with graded readings for translation. Four class meetings a week.

# LATIN 201-1,2,3 Introduction to Latin Literature

Grammar and vocabulary review. Readings in Catullus, Horace, and other selected comedy and prose authors; emphasis on literary analysis. Prerequisites: 101-1,2,3 or department placement.

LATIN 310-0 Readings in Latin Literature Authors and topics arranged in a three-year cycle. Authors include Plautus, Terence, Lucretius, Cicero, Virgil, Horace, Ovid, and Tacitus. Prerequisites: 201-1,2,3 or equivalent.

**LATIN 399-0 Independent Study** For advanced students approved by the department, individual programs under the direction of a department member.

# **Courses in Greek**

**GREEK 101-1,2,3 Elementary Greek** Vocabulary, forms, and syntax of the Homeric dialect of ancient Greek, using Homer's *lliad* as the basic text.

# GREEK 201-1,2,3 Introduction to Greek Literature

Review of basic grammar and vocabulary. Representative selections from Greek authors in their historical and cultural context. **1.** Epic. **2.** Drama. **3.** History, philosophy. Prerequisites: 101-1,2,3 or equivalent.

**GREEK 301-0 Readings in Greek Literature** Authors and topics arranged in a three-year cycle. Authors include Homer, Pindar, Herodotus, Thucydides, and Plato. Pre-requisites: 201-1,2,3 or equivalent.

**GREEK 399-0 Independent Study** For advanced students approved by the department, individual programs under the direction of a department member.

#### **Courses with Readings in English**

These courses offer an understanding of classical culture and its influence in history, literature, and art. There are no prerequisites in Greek or Latin.

**CLASSICS 110-0 Scientific Vocabulary through Classical Roots** Greek and Latin etymology in the vocabulary of the sciences. Designed primarily for science or medical students. Self-paced independent study.

**CLASSICS 210-0 Early Western Civilization** Comparative study of early Greek and Hebrew cultures against the background of other civilizations of the ancient Near East.

**CLASSICS 211-0 Classical Greece** History, literature, philosophy, and art in ancient Athens.

**CLASSICS 212-0 Roman Civilization** Development and character of the Roman Republic and Empire, emphasizing political and social institutions. Roman origins of Europe's politics, religion, literature, and ideas.

#### **CLASSICS 240-1,2 The Literary Achievement of Greece**

and Rome 1. Homer and Hellenism: the *Iliad*, the *Odyssey*, and their early influence. 2. Hellenistic and Roman humanism; new values in comedy, Virgil's *Aeneid*, satire.

**CLASSICS 244-0 The Ancient Novel** Critical approach to the origins of the genre of the novel through works by ancient Greek and Latin authors.

**CLASSICS 260-0 Classical Mythology** Stories of gods and heroes as reflections of the structure and attitudes of Greek and Roman society and as changing models for human behavior.

**CLASSICS 321-1,2,3 Roman History** Politics, economics, and society. **1.** The Republic, from the founding of Rome to the accession of Augustus (753–31 B.C.). **2.** The early Empire, from Augustus to the accession of Marcus Aurelius (31 B.C.–A.D. 180). **3.** Later Roman Empire, from Marcus Aurelius to the death of Constantine (A.D. 180–337).

**CLASSICS 330-0 Ancient Economy** Preindustrial Mediterranean economies of ancient Greece and Rome. Farming, transportation, settlement patterns, capitalism and trade, slavery; ends with a rustic Roman banquet.

**CLASSICS 342-0 Early European Medicine** Greco-Roman origins of European medical thought from the cult of Asclepius to Galen; emphasis on ethical ideas, strengths, and weaknesses of Greek science.

**CLASSICS 345-0 Greek Tragedy** Readings in the plays of Aeschylus, Sophocles, and Euripides; emphasis on social and institutional contexts of Greek theater and its influence on Western drama.

**CLASSICS 348-0 Roman Comedy** Readings in the plays of Plautus and Terence: focus on dramatic and linguistic style in Roman comedy.

**CLASSICS 358-0 Roman Architecture** Architecture and urbanization, 700 B.C.–A.D. 337. Important sites outside Rome: Pompeii, Herculaneum, Baalbek, Jerash, Palmyra, and Lepcis Magna. Presented alternate years with 359.

**CLASSICS 359-0 Topography of Imperial Rome** Covers the period of Rome's maximum ancient development, the reign of the Emperor Constantine. Presented alternate years with 358.

# **CLASSICS 390-0 Topics in Greco-Roman Civilization**

Content varies; may be repeated for credit with different topic. Recent topics include music and the city; the origins of democracy; written voices; Herodotus and the invention of history.

# **Related Courses in Other Departments**

ART HIST 310-2 Ancient Art: Greek Art COMP LIT 201-1 Western European Literature PHIL 265 Introduction to the Philosophy of Law PHIL 320 Studies in Ancient Philosophy POLI SCI 301 Moral Dilemmas and Political Theory

# **Cognitive Science Program**

Cognitive science is the scientific study of the mind with the goal of understanding the nature of thought. Students learn the ways in which converging sources of evidence may be integrated to discover the mechanisms underlying the complex adaptive properties of human cognition. The major in cognitive science gives a broad foundation in this interdisciplinary field, encompassing cognitive psychology, linguistics, artificial intelligence, neuroscience, and related disciplines. Required introductory courses survey basic phenomena and approaches; basic methodology courses impart the required methods of cognitive science; core courses provide foundations of disciplines within cognitive science; and elective courses allow students to pursue more advanced study in particular disciplines. A junior proseminar focuses on ongoing research in the field by Northwestern faculty. Qualified seniors will be invited to take a senior honors seminar to engage in independent research under the guidance of department faculty and to write a senior thesis.

For additional information about the Program in Cognitive Science, see the program director.

#### **Major in Cognitive Science**

#### Program courses

Required introductory courses (3): COG SCI 207, 210, 211 Basic methodology requirements (3): COMP SCI 110 or

111; PSYCH 201, 205

*Core course requirements (3):* 1 course from three of the following five areas:

- Artificial intelligence: COMP SCI 348
- Cognitive neuroscience: PSYCH 212, 361
- Cognitive psychology: PSYCH 228
- Learning sciences: LOC 212, 301
- Linguistics: LING 205, 206, 207

Advanced proseminar requirement (1): COG SCI 366 (should be taken in the junior year)

*Advanced electives (6):* 6 courses, with at least 3 in one area (major emphasis) and at least 2 outside that area

- Anthropology: ANTHRO 360; 389; 390; 395 or 595; 471
- Artificial intelligence: COMP SCI 325, 332, 337, 344, 432, 437-1,2
- Cognitive neuroscience: PSYCH 312-2, 321, 324, 342, 460, 470; COMM SCI 303; BIOL SCI 302, 306, 314, 377 (see the Undergraduate Program in Biological Sciences for prerequisites for these courses)
- Cognitive psychology: PSYCH 313, 314, 333, 334, 335, 360, 362, 460, 461, 466
- Learning and instruction: COMM SCI 303, 306, 350, 392, 492; LOC 301 (if not counted as a core course), 401, 423, 429, 439; MUSIC ED 437
- Linguistics: LING 305, 306, 309, 311, 316, 319, 329, 344, 371, 372
- Music cognition: MUS THRY 351; MUSIC ED 437, 438
- Philosophy: PHIL 325, 327, 353
Other 300- and 400-level courses may be counted as advanced electives with consent of the cognitive science adviser. It is strongly recommended that students pursue independent study (399) in cognitive science or in one of the departments listed above. This course may count as an advanced elective. For students pursuing honors, the second quarter of the honors seminar (398-2) may count as an advanced elective.

*Note:* Cognitive science majors who wish to double major must show a minimum of 11 courses not double-counted in any other major(s). Cognitive science majors seeking a minor in another discipline cannot double-count for that minor any courses used to meet the major requirements in cognitive science.

#### Minor in Cognitive Science

The minor in cognitive science broadens the academic background of students majoring in related fields. The goal is to provide students with the methods and foundations for understanding cognitive issues in an interdisciplinary framework.

#### Minor course requirements (8 units)

- Introductory courses: 2 courses chosen from 207, 210, 211
- Basic methodology courses: 2 courses (at least 1 from outside a student's major area) chosen from PSYCH 201, 205; COMP SCI 110, 111
- Electives (4): 4 courses chosen from at least two areas, at least 3 at the 300 level and at least 3 outside the major. For available areas, see the advanced electives for the major. At least 1 course must be chosen from the courses listed below.

Artificial intelligence: COMP SCI 348 Cognitive neuroscience: PSYCH 212, 361 Cognitive psychology: PSYCH 228 Learning sciences: LOC 301 Linguistics: LING 205, 206, 207

#### Courses

# COG SCI 207-0 Introduction to Cognitive Modeling

Introduction to artificial intelligence and cognitive science from a nontechnical perspective. Fundamental questions concerning thinking, beliefs, language understanding, education, and creativity.

**COG SCI 210-0 Language and the Brain** The study of language and its biological basis from linguistic, psychological, and neuroscientific perspectives.

**COG SCI 211-0 Learning, Representation, and Reasoning** Interdisciplinary study of the nature of the mind with emphasis on learning, representation, and reasoning.

**COG SCI 366-0 Cognitive Science Proseminar** New and ongoing research in the field by Northwestern faculty. Prerequisite: consent of instructor.

**COG SCI 398-1,2 Senior Honors Seminar** Independent research for a senior thesis under the direction of department faculty. By invitation only.

**COG SCI 399-0 Independent Study** Faculty-directed research. Consent of instructor required.

# **Comparative Literary Studies Program**

Comparative literary studies is an interdepartmental, interdisciplinary program for the study of literature across national and linguistic lines and within its historical and cultural contexts. Drawing on faculty from the various literature departments and related disciplines (such as art history and philosophy), the program reflects the belief that literature is truly an international activity best understood within the larger context of other literatures and other cultural activities. Whereas specific national literature majors encourage students to trace the development of a single tradition, comparative literature juxtaposes literatures of several cultures in a variety of ways: for example, by period, epoch, cultural milieu, or any of the larger questions raised by the very existence of literature as a way of representing and interpreting the world. Thus, the program enables students not only to read texts critically but also to reflect upon the theories and methods that have guided literary study in the past and in the present.

The Program in Comparative Literary Studies offers an undergraduate major and a graduate program leading to the PhD degree.

### **Major in Comparative Literary Studies**

The major in comparative literary studies includes a core curriculum and electives that make up a concentration. The core curriculum consists of eight courses common to all majors that introduce basic texts, methods, and theoretical models of the discipline. Students consult with an undergraduate adviser to plan an eight-elective concentration.

Each concentration exemplifies an important orientation of comparative literary studies. Concentrations are generally organized according to three broadly defined fields: language and literature (focus on particular literary traditions); world literature (exploration of a broader range of literatures, particularly non-Western); and literature and theory (integration of a study of literature with work in related disciplines).

During the spring quarter of the junior year, comparative literary studies majors submit written proposals to the program adviser explaining in detail the concentration chosen and how the requirements will be fulfilled. Majors in study abroad programs during their their junior year should submit their proposal before leaving Northwestern. Majors may preregister each quarter during the week preceding general preregistration. Additional information may be obtained from the program office.

#### Program courses

#### Core courses (8)

#### • 201-1,2, 202, 280

- 2 courses at the 200 level or above in a literature other than English in the original language; if literature is not taught at the 200 level in the original language, at least three years of the language and corresponding courses in the literature in translation, which may be concentration electives
- 301, 302, or 303
- 398

**Concentration (8):** 8 courses organized according to an individual concentration drawn from the following categories:

- 200- or 300-level courses in literature in the original language
- 300-level courses in literature in translation
- 300-level courses in disciplines related to literary studies (for example, art history, film studies, history, philosophy, women's studies)

Students must take at least 1 course in Western literature before 1750 and at least 1 course in a non-Western literature. At least 5 electives must be at the 300 level or higher.

The principle for the construction of a concentration is precisely that it *concentrates* the student's interests into a coherent and recognizable program of study. Examples of individual concentrations:

- Regionally defined or "national" literatures (African [including anglophone and/or francophone], American, Chinese, English, French, German, Italian, Japanese, Latin American, Spanish [peninsular])
- Epochs of literature (medieval, Renaissance, romanticism, modernism)
- Genres (novel, drama, lyric)
- Literature and another discipline (anthropology, art history, film, history, intellectual history, philosophy, theater)

#### **Double Major**

Majors in comparative literary studies must show a minimum of 12 courses not double-counted in any other major(s).

#### **Honors in Comparative Literary Studies**

Students may qualify for honors with a grade point average of 3.3 or above in the major. They must take one or two units of 399 beyond the regular course requirements of the major, and they must write an honors thesis of 25–30 pages. Students who wish to pursue honors must declare their intention to do so by the beginning of their senior year. For more information, consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

#### **Preparation for Graduate Study**

While it is possible to complete the Northwestern BA in comparative literary studies with only two 200-level courses in one language other than English, most PhD programs in comparative literature require significant mastery of at least two languages in addition to English.

#### **Study Abroad**

The Program in Comparative Literary Studies encourages all majors who qualify to consider a year of study abroad during the junior year.

# Courses Primarily for Freshmen and Sophomores COMP LIT 201-1,2 Western European Literature:

**Tradition and Transformation** A two-quarter sequence interweaving selected classics of the Western European literary tradition from Homer and Genesis forward with modern transformations of traditional themes.

**COMP LIT 202-0 Practices of Reading** Introduction to fundamental skills and problems of close reading, with special focus on the "conflict of interpretations" between competing practices of reading.

**COMP LIT 203-0 Introduction to Comedy** Survey of comic drama from Aristophanes to the present day.

**COMP LIT 205-0 Introduction to Modern Drama** Survey of principal dramatic movements since Ibsen.

**COMP LIT 206-0 European Fiction since 1900** Reading in translation of some important works written in continental languages during the present century, by writers such as Dostoevsky, Mann, Kafka, Rilke, Sartre, Camus.

**COMP LIT 210-0 The Bible As Literature** Selected books of the Hebrew Bible and New Testament studied from a literary perspective; issues of plot, character, genre, narrative strategy, and theories of interpretation.

**COMP LIT 213-0 Introduction to Fiction** Fictional modes such as the novella, the short story, and the novel. May be repeated for credit with different topic.

**COMP LIT 271-1,2,3,4 Japanese Literature in Translation** A set of four courses surveying Japanese literature from the eighth century to the present.

# COMP LIT 274-1,2,3 Introduction to Chinese Literature

Survey of Chinese poetry and fiction from the fifth century B.C. to the present.

# COMP LIT 275-0 Arabic Literature in Translation

Introduction to Arabic literary background; survey of literary genres from the pre-Islamic period to the present.

#### **COMP LIT 276-0 African Literature in Translation**

Continental African literature. Content varies. May be repeated for credit with different topic.

**COMP LIT 278-0 Modern Hebrew Literature in Translation** Introduction to the main works of contemporary Israeli writers.

COMP LIT 279-0 Modern Jewish Literature A study of

modern European, American, and Israeli Jewish literature in its historical context.

**COMP LIT 280-0 Interpreting Culture** Introduction to the theory and practice of interpreting "cultural texts," the literary and other texts through which human culture imposes structures of meaning on the world.

#### **Courses Primarily for Juniors and Seniors**

Comparative literary studies and language majors will read the texts and be tested in their language or area of expertise whenever the course material allows.

**COMP LIT 301-0 Writing in Society** Studies in relations between literature and society through a series of theoretical readings in the sociology of literature, juxtaposed with literary examples from different societies.

**COMP LIT 302-0 Language in the Text** Close reading of exemplary literary and theoretical texts with a focus on the relationship between the meaning of texts and the linguistic devices that produce meaning: that is, on the tension between what a text means and how it means.

**COMP LIT 303-0 Literature in History** Studies in the historicity of literature, with attention to the development of literary kinds over time and to the historical circumstances in which literature is produced.

**COMP LIT 310-0 Studies in Literary Genres** Selected genres, such as epic, pastoral, autobiography, comedy, satire, the essay. May be repeated for credit with different topic.

**COMP LIT 312-0 Studies in Drama** Content varies. May be repeated for credit with different topic.

**COMP LIT 313-0 Studies in Fiction** Content varies. May be repeated for credit with different topic.

**COMP LIT 362-1,2,3 Modern Drama 1.** Major developments from the late 19th century to the end of World War I. **2.** 1920s–1950s. **3.** From absurdist theater to the present.

**COMP LIT 365-0 The Avant-Garde** Nature, origins, and development of the avant-garde movements in Europe, North America, and Latin America since the early 20th century.

**COMP LIT 375-0 Literature and the Arts** Differences and similarities of literature and the visual arts and/or music. Content varies. May be repeated for credit with different topic.

#### COMP LIT 382-1,2,3 History of Literary Criticism

1. Changing concepts of mimesis, genre, and style from Plato to the Renaissance. 2. The emergence of neoclassical theories in France and England and their replacement by romantic theories in England and Germany. 3. Major themes and movements in 20th-century criticism.

**COMP LIT 383-0 Special Topics in Theory** For students with previous study of criticism and literary theory. Content varies. May be repeated for credit with different topic.

**COMP LIT 390-0 Topics in Comparative Literature** Content varies: for example, problems of literary translation, literature and psychoanalysis. May be repeated for credit with different topic.

# COMP LIT 397-1,2,3 Literary Studies Colloquium

Yearlong course carrying one unit of credit, organized around a particular problem in the study of literature; presentations by distinguished visitors and Northwestern faculty. Preparation and follow-up for each presentation. Prerequisite: consent of department.

**COMP LIT 398-0 Senior Seminar** Variable topics and reading lists to develop work undertaken in earlier courses in a setting that introduces the active give-and-take of current intellectual debates. Required of senior majors in comparative literary studies. Prerequisite: consent of program adviser.

COMP LIT 399-0 Independent Study (1-3 units)

#### **Related Courses in Other Departments**

# Computing and Information Systems Program

The Program in Computing and Information Systems offers students in Weinberg College the opportunity to study computer science within the context of the college's focus on liberal arts and sciences, as distinct from the engineering context offered by the Department of Computer Science in the McCormick School of Engineering and Applied Science. Faculty and courses for the program are drawn from the McCormick department. Courses and research in the department address the underlying theories, enabling technologies, and applications of modern computer science. There is a strong focus on the design, implementation, and evaluation of software systems, including interactive, distributed multimedia, artificial intelligence, robotics, and database systems. Research in the department is highly interdisciplinary, including important links with the Cognitive Science Program and the Department of Psychology in Weinberg College as well as the Department of Learning Sciences in the School of Education and Social Policy. Undergraduates are encouraged to join ongoing research projects within the department. For more information on the Department of Computer Science and its course offerings, see the McCormick School section of this catalog.

The major in computing and information systems is highly flexible, emphasizing the interdisciplinary study and project work that are critical in a field as rapidly changing as computer science. The specific courses to be taken are largely determined by the goals and interests of individual students. The major includes a two-quarter capstone project that helps integrate the skills and knowledge acquired in course work.

Computing facilities available to students in the program are extensive. The campus, including all dormitories, is completely networked. All students have full Internet access. E-mail, Web sites, and other computer-based communication resources are extensively used within the program to foster a sense of community and facilitate communication among students and faculty beyond the classroom.

#### **Major in Computing and Information Systems**

For requirements in mathematics, see related courses below.

#### Program courses

*Introductory sequence:* COMP SCI 111, 211, and 311. Students without prior programming experience may wish to take 110 before 111.

Intermediate and advanced courses: 8 courses chosen from COMP SCI 310 through 399 (excluding 317)

*Additional advanced technical courses:* 2 courses chosen from the advanced computer science list, the computer science mathematics list, and/or the computer science external technical elective list. See the program director for up-to-date information on suitable courses in this category.

Advanced electives: 2 courses chosen with the consent of the student's adviser. Examples of appropriate courses include advanced courses in computer science; social sciences such as psychology, economics, or learning sciences; mathematics; natural sciences such as biological sciences, chemistry, or physics; and other disciplines such as radio/ television/film, journalism, or music.

**Project courses:** 2 courses requiring substantial project work (e.g., COMP SCI 394 or 399). The project or projects developed in these courses must be approved by the student's adviser as well as the course instructor in order to fulfill the program requirements.

Related courses: MATH 214-1,2,3, 217, and 330-1 or equivalent

# Computing and Information Systems Second Major for ISP Students

The Integrated Science Program (ISP) is a highly selective program in Weinberg College. Students majoring in ISP may complete a second major in computing and information systems through a curriculum tailored specifically to their needs.

# Program courses

Introductory sequence: COMP SCI 111, 211, 311

Intermediate and advanced courses: 7 courses chosen from COMP SCI 310 through 399 (excluding 317)

**Project courses:** 2 quarters of ISP 398 or 2 quarters of COMP SCI 399. Projects developed in these courses must be approved by the student's advisers in both ISP and the computing and information systems program in order to fulfill the program requirements.

#### Minor in Computing and Information Systems

The program offers a minor in computing and information systems for students who wish to develop a strong competence in computer science while majoring in another area. Students choosing this minor are expected to have completed MATH 214-1,2,3 and 217, which are prerequisites for most computer science courses.

#### Minor course requirements (9 units)

- *Introductory sequence*: COMP SCI 111, 211, and 311. Students without prior programming experience may wish to take 110 before 111.
- Intermediate and advanced courses: 6 courses chosen from COMP SCI 310 through 399 (excluding 317)

#### Drama Program

The Program in Drama offers undergraduates the opportunity to combine the study of dramatic literature in classics, comparative literary studies, English, and modern language courses with performance studies and theater courses in the School of Speech. Recognizing the uniqueness of drama among literary genres as a performing art, it seeks to develop an understanding and appreciation of dramatic literature informed by the study of acting, interpretation, playwriting, or directing. The program is not intended for students interested in professional performance but is directed rather toward those who wish to bring to the study of dramatic history and criticism a developed awareness of the problems and techniques involved in bringing a dramatic text to full life. Major requirements ensure a balance of historical, literary, and theatrical approaches to drama; they are flexible enough to allow for special interests and concentrations, including the study of non-English drama in the original language. All students electing this major must work out a long-range plan of study with the program's director.

#### **Major in Drama**

# Program courses

*Introductory courses:* 2 units from the following sets of courses, 1 from Weinberg College and 1 from the School of Speech:

- Weinberg College: COMP LIT 203, ENGLISH 212, INTG ART 291-1
- Speech: GEN SPCH 103, 210-3; THEATRE 140-1,2, 143

*Major courses:* 12 courses, with a minimum of 9 300-level courses; to maintain a balance between literary and theat-rical approaches to the study of drama, no more than 7 courses should be from one school, and they must be distributed as follows:

- At least 6 units in the history and criticism of drama, including 3 units in drama before 1850 (but not all in Shakespeare) and 2 units in drama after 1850. Eligible courses include AF AM ST 259; CLASSICS 240-2, 345; COMP LIT 205, 312, 362-1,2,3; ENGLISH 312, 332, 334-1,2, 339, 342; FRENCH 272, 330; GERMAN 324; SLAVIC 369; SPANISH 342; THEATRE 244-1,2, 345-1,2, 365, 366, 367, 368
- At least 3 units in performance practices: FRENCH 390; INTG ART 390-1; PERF ST 224, 309-2, 318, 324-1,2; THEATRE 243-1,2, 340-1,2, 341-1,2,3, 346-1,2
- 1 unit in an advanced seminar, normally a 400-level course approved by the program director

**Related courses:** 4 units at the 200 or 300 level in subjects related to the study of drama, approved by the program director. Applicable areas include aesthetics, criticism, cultural and intellectual history, humanities, literature, teaching of dramatics.

#### **Honors in Drama**

Seniors with distinguished records in major courses who wish to be candidates for honors in the program do so by completing an independent project. Interested students should consult with the program director in the spring quarter of the junior year. See also Honors under Academic Policies earlier in this section of the catalog.

# Course

**DRAMA 399-0 Independent Study in Drama** For senior drama majors who have completed the required seminar and wish to undertake a project in candidacy for honors in drama. Prerequisite: approval of program director.

#### Economics

The program in economics enables students to understand the basic concepts, theories, and techniques of economics as they apply to economic problems and policies. These may focus on macroeconomics, applied microeconomics, quantitative economics, or economic history. Whatever courses students take, they will become familiar with the way economists think about problems and devise solutions to them. Although the program does not offer specialized professional training in economics, it is an excellent preparation for graduate work in economics, the study of law, or a career in business or government. Students should consult a department adviser about elective courses to fit their needs.

# **Major in Economics**

The introductory courses 201 and 202 must be taken first and in that order. STAT 210 and MATH 214-1 should also be taken early in the program; the former is a prerequisite for ECON 281 and the latter for 310-1. 281 and the intermediate theory courses should be completed before 300-level electives are taken. Although only MATH 214-1 is required, some 300-level electives may require MATH 214-2, 214-3, or 214-4, all of which majors are strongly urged to take.

# Departmental courses

Introductory courses: 201, 202, 281

Intermediate theory courses: 310-1,2, 311

Elective courses: 6 additional 300-level courses

**Related courses:** MATH 214-1, STAT 210, and 3 additional courses in the social sciences, mathematics, or statistics, no more than 1 at the 100 level. ECON 260 may be taken in partial fulfillment of this requirement.

#### Minor in Economics

The minor offers training in economic theory through the intermediate level, instruction in quantitative methods of econometrics, and opportunity for advanced elective work in students' areas of interest. The introductory and intermediate courses are the same as those in the major, except that only two of the intermediate theory courses are required (310-1 and -2 *or* 311). As in the major, MATH 214-1 and STAT 210 must be taken early in the program because they are prerequisites for required courses.

# Minor course requirements (8 units)

- Introductory courses (3): 201, 202, 281
- Intermediate theory courses (2): 310-1; 310-2 or 311
- Elective courses (3): 3 additional 300-level courses

#### Four-Year BA/MA

The department offers a four-year BA/MA for outstanding students in economics. Graduate-level courses in economic theory are required. Interested students should consult the director of undergraduate studies in their sophomore year and should see Four-Year Master's Programs in the Undergraduate Education section of this catalog.

#### **Honors in Economics**

By invitation only, superior students in economics may pursue departmental honors by completing, in addition to the regular requirements of the major, one of the following three options: 398-1,2; two quarters of 399; or two 400-level field courses in economics. Under each option, candidates must submit an honors thesis presenting original research. Interested students should consult with the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

#### The Teaching of Economics

Weinberg College students pursuing a major in economics who also wish to be certified for secondary teaching of economics with history must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

#### **Courses Primarily for Freshmen and Sophomores**

**ECON 201-0 Introduction to Macroeconomics** Scarcity and choice; elements of demand and supply, determinants of aggregate output, employment, inflation, growth, and balance of payments.

**ECON 202-0 Introduction to Microeconomics** Consumers' and producers' influence on structure of output and prices and distribution of income. Social efficiency in resource allocation. Government impact on allocative efficiency and distributive equity. Prerequisite: 201.

**ECON 213-0 Economics of Gender** Analysis of gender differences in employment and earnings. Family, labor market, discrimination, segregation, historical and international conditions, and antidiscrimination legislation.

**ECON 250-0 Business and Government** Survey of the functions, origins, and evolution of government control over business decisions in the American economy. Special emphasis on the modern structure of government regulation with attention to remote origins. Prerequisite: 202.

**ECON 260-0 Accounting and Business Finance** Accounting and managerial finance, including the principles of accounting, the elementary concepts of the theory of capital and its relationship to the objectives and problems of managing the firm. Prerequisites: 201, 202, or consent of instructor.

# **ECON 281-0 Introduction to Applied Econometrics**

Estimation and analysis of a variety of empirical econometric models. Descriptive statistics, univariate regression, multiple regression, simultaneous equations, and forecasting. Prerequisite: STAT 210 or equivalent.

# Courses Primarily for Sophomores, Juniors, and Seniors

**ECON 305-0 Comparative Economic Systems** Economic structure, policy, and performance in advanced industrialized nations; examination of economies in transition from socialism to capitalism in central and Eastern Europe. Prerequisites: 281, 310-1, 311.

**ECON 307-0 Economics of Medical Care** Effects of medical care on health; health insurance, public and private

demand for medical care, and the market for medical care; regulation of hospitals and physicians; roles of nonprofit and for-profit organizations; technological change. Prerequisites: 281, 310-1,2.

**ECON 308-0 Money and Banking** Nature of money and bank credit. Development, functions, and operation of monetary standards and credit systems. Banking and credit policies; price levels. Interrelationships of domestic and foreign monetary systems. Prerequisites: 281, 310-1,2.

**ECON 309-0 Elements of Public Finance** Theory and practice of public finance. Welfare aspects of taxation and public expenditure decisions. Budgeting, public investment, external costs and benefits, and public debt. Prerequisites: 281, 310-1,2.

**ECON 310-1,2 Microeconomics 1.** Consumer behavior and the theory of demand; production, cost, supply functions; choices under uncertainty, insurance; competitive equilibrium; subsidies, taxes, price controls; monopoly and monopsony. Prerequisites: 201, 202, MATH 214-1. **2.** Price discrimination and public utility pricing; monopolistic competition, oligopoly, duopoly models; game theory; factor demands; general equilibrium theory and welfare economics; information theory; externalities and public goods. Prerequisite: 310-1.

**ECON 311-0 Macroeconomics** Macroeconomics and monetary policy. Behavior of economy as a whole. Income, inflation, unemployment, and growth; consumption, investment, and rate of interest; monetary and fiscal policy. Prerequisites: 201, 202, MATH 214-1.

**ECON 315-0 Topics in Economic History** Topics vary: for example, the decline of European feudalism, Malthusianism, convertibility and free trade, constant wage shares during growth, the origins of the welfare state. Prerequisites: 281, 310-1, 311.

**ECON 317-0 Topics in Economic Demography** The economics of fertility, migration, population growth, and demographic changes. Topics may include immigration, illegal migration, the baby boom, aging, retirement, and female labor force participation. Prerequisites: 281, 310-1, 311.

**ECON 318-0 History of Economic Thought** Development of economic thought from the advent of the mercantilists to the formation of current schools of economics. Pre-requisites: 281, 310-1,2, 311.

**ECON 321-0 African American Economic History** Economic experiences of African Americans as slaves and free people in the pre–Civil War period and in post–Civil War agriculture. South-North migration, urbanization, civil rights movements, and global economic competition. Prerequisites: 281, 310-1, 311.

**ECON 322-0 Evolution of the Global Economy** Global integration and growth in the 19th and 20th centuries: historical perspectives and current controversies. Topics

include international capital movements; mass migration; commercial policy and the growth of trade; evolution of the payments system; instability and war; comparative economic growth; development and underdevelopment. Prerequisites: 281, 310-1, 311.

**ECON 323-1,2 Economic History of the United States** Economic development of the United States with emphasis on changing structure and performance of the economy. **1.** Colonial period to 1865. **2.** 1865 to the present. Prerequisites: 281, 310-1, 311.

**ECON 324-0 Western Economic History** Western European developments, 1750 to the present: demographic, technical, social, and economic change. Prerequisites: 281, 310-1, 311.

#### ECON 325-0 Economic Growth and Development

Macroeconomic aspects of long-term patterns of economic development. The effects of investment, education, population, and technological change on economic growth. Pre-requisites: 281, 310-1,2, 311.

ECON 326-0 The Economics of Developing Countries

Structure, performance, and problems of developing economies. Topics may include land use, labor, migration, credit, insurance, and famine. Prerequisites: 281, 310-1,2, 311.

**ECON 336-0 Analytic Methods for Public Policy Analysis** Formulation of objectives, structuring decision problems, choices under uncertainty, interactive decisions, and the impact of organizational structure on project outcomes. Prerequisites: 281, 310-1,2.

**ECON 337-0 Economics of State and Local Governments** Economic functions and financing of state and local governments in theory and practice; costs and demands for local public services; role of government finance in urban and regional growth. Prerequisites: 281, 310-1,2.

**ECON 339-0 Labor Economics** Survey of economic problems growing out of employment relationships; theories and processes of wage and employment determination, income distribution, and the role of trade unions and issues of economic security. Prerequisites: 281, 310-1,2, 311.

**ECON 349-0 Industrial Economics** Price and efficiency performance of American industries representative of various types of market structures and practices. Prerequisites: 281, 310-1,2.

**ECON 350-0 Monopoly, Competition, and Public Policy** Present public policy and unsettled issues with respect to structure and practices of industrial markets; concentration, vertical integration, and forms and effectiveness of competition. Prerequisites: 281, 310-1,2.

**ECON 351-0 Law and Economics** The impact of judicial decisions and statutory enactments on economic behavior, including corporate law, antitrust and regulation statutes and the way this affects markets. Prerequisites: 281, 310-1,2.

#### ECON 354-0 Issues in Urban and Regional Economics

Factors affecting the spatial distribution of economic activity. Applications of economic analysis to problems of urban areas such as housing markets, zoning restrictions, and racial patterns of employment and housing. Prerequisites: 281, 310-1,2.

**ECON 355-0 Transportation Economics and Public Policy** The demand for alternative modes by passengers and shippers. Cost of providing transportation, competition, regulation, optimal pricing, subsidies, congestion pricing, and urban transit. Prerequisites: 281, 310-1,2.

**ECON 360-0 Foundations of Corporate Finance Theory** How corporations allocate resources over time as facilitated by capital markets. Theory of asset evaluation, economic analysis of uncertainty, and capital budgeting and capital structure decisions. Prerequisites: 281, 310-1, 311.

**ECON 361-0 International Trade** International and interregional trade. Factors influencing trade in goods and services between areas. Reasons for and effects of impediments to trade, such as transport costs, tariffs, quotas, and voluntary export restrictions. Prerequisites: 281, 310-1,2; 311.

**ECON 362-0 International Finance** Determination of exchange rates, balance of payments, and international asset flows and prices; international transmission of macro-economic disturbances. Prerequisites: 281, 310-1, 311.

**ECON 370-0 Environmental and Natural Resource Economics** Externalities and the role of property rights, pollution, waste disposal, common property problems, renewable resource management, nonrenewable resource use and depletion, recyclable resources, water allocation, and management of public lands. Prerequisites: 281, 310-1,2.

ECON 380-1,2 Introduction to Mathematical Economics
1. Noncooperative game theory, with applications to industrial organization, auctions, and theories of the firm. Prerequisites: 310-1,2; 311; MATH 214-2,3 or 214-4.
2. Cooperative and noncooperative game theory and decision making under uncertainty. Prerequisite: 380-1 or consent of instructor.

**ECON 381-1,2 Econometrics 1.** Probability and distribution theory, statistical inference, simple and multiple regression, specification error and multicollinearity, heteroskedasticity and serial correlation, measurement error, dummy variables. Prerequisites: 281, 310-1, 311; MATH 214-2,3 or 214-4. **2.** Hypothesis testing, estimation with deficient data, distributed lags, panel data, simultaneous equation systems, limited dependent variables. Prerequisite: 381-1.

**ECON 383-0 Economic Forecasting** Techniques for making and evaluating economic and business forecasts, including univariate regressions, autoregressive and ARMA models, vector autoregressive models, and structural econometric models. Prerequisites: 281, 310-1, 311.

**ECON 395-0 Junior Seminar** Small seminars led by different department members on their special interests.

Advanced work through supervised reading, research, or discussion. Prerequisites: 281; 310-1,2; 311; MATH 214-2,3 or 214-4.

**ECON 398-1,2 Senior Honors Seminar** For students of superior ability. Original research on a topic of interest to the student, culminating in a senior honors thesis. By department invitation only. Grade of K given in 398-1. Prerequisites: 281; 310-1,2; 311; MATH 214-2,3 or 214-4; at least four 300-level economics electives.

**ECON 399-0 Independent Study** Advanced work through reading, research, and discussion in areas of particular interest to the student. Project to be decided by mutual agreement with a faculty member.

#### **Related Course**

#### ANTHRO 341-0 Economic Anthropology

This course may be taken in partial fulfillment of the six elective requirements in economics. See Anthropology.

# English

Perhaps the most striking thing about the study of English literature today is how varied it is. While some scholars and teachers emphasize the formal qualities of literary works, others address such questions as what counts as "literary" and the relationship of literature to society. The particular kinds of texts they examine also vary a good deal, as do their assumptions, methods, and emphases. The unity underlying this variety is a common emphasis on close reading and careful analysis of the written word. The English department's curriculum reflects this variety and unity, and it offers a major that enables each student to pursue a particular area of interest within a broader understanding of the sweep of literary history and the range of literary study. The department also offers students disciplined training in the writing of verse and fiction. Virtually all of its courses also include practice in the writing of clear, concise, and persuasive expository prose. Rigorous training in thinking and writing is valuable for any career that an undergraduate may ultimately pursue and makes English an attractive major for students preparing for careers in medicine, law, and business as well as in the teaching of English at all levels.

The department takes pride in the diversity of perspectives afforded by its courses. In addition to teaching classes in the department, English faculty contribute substantially to the course offerings in theater and drama, comparative literary studies, and American studies.

University Library is a valuable resource for the advanced study of British and American literature, maintaining notable collections and databases in 19th- and 20thcentury materials, especially modern "little" magazines. English majors also often profit from University programs for foreign study, particularly at the University of Sussex in England.

#### **Majors in English**

A complete description of undergraduate English major programs may be obtained from the department office and from the department's Web page at www.english .northwestern.edu. Detailed descriptions of courses offered each quarter are published in "English Notes," available from the department office three times a year in advance of registration. In addition, a tentative list of course offerings for the following year is available each spring. Writing courses (206, 207) and other courses whose content varies (e.g., 313, 348, 378) may be repeated, but only with the consent of the department.

# English and American Literature

# Departmental courses

Introductory courses: 210-1,2 or 270-1,2; 298

#### Major courses: 10 courses

- 5 courses within a designated concentration:
- 1. new world and postcolonial literature
- 2. medieval literature
- 3. British literature, 1500-1660 plus Milton
- 4. Restoration and 18th-century British literature
- 5. 19th-century British literature, including Romantic literature
- 6. 20th-century literature in English
- 7. American literature
- 8. literary criticism and theory
- 9. literature and culture
- 10. literature and gender
- 11. poetry
- 12. drama
- 13. fiction
- 5 courses outside the concentration
- 9 courses at the 300 level or above
- At least 9 English department courses, literature courses offered by the Department of African American Studies, or courses taught by members of the English department through other departments or programs and that deal substantially with literary works originally written in English (i.e., not in English translation)
- At least 3 of these courses must deal substantially with texts written before 1798 and at least 3 with texts written after 1798
- At least 1 course in American literature
- At least 1 course in literary criticism or theory

**Related courses:** At least 2 quarter-courses in fields outside of literature and related to the student's concentration. Specific listings are available in the department office and on the department's Web page at www.english.northwestern .edu.

*Note:* Requirements for different concentrations vary. For more information, consult with the department office, University Hall, room 215, or the department's Web page.

75

#### English Major in Writing

Students in English may also apply to major in writing. Admission to the writing major is competitive, based on a manuscript of creative work from English 206 and 207. The major offers an apprenticeship in the writing of poetry and fiction, but it is not restricted to "creative" writing alone. A required course in prose style and argument encourages students to focus on discursive forms, while a strong literature component and a course in the culture of writing further anchor the writing done in the practical workshop courses in poetry and fiction within a context of general literacy.

Students may apply for admission to the writing major through the department in early May of each year.

# Departmental courses

Introductory courses: 206 and 207

#### Major courses

- 1 yearlong theory and practice sequence: 393-FW,TS or 394-FW,TS
- 392 and 395
- 6 literature courses, at least 2 of which must deal with works written before 1798 and at least 2 with works written after 1798

*Note:* Both 393 and 394 will satisfy the major requirement for a course in literary criticism or theory. Other major requirements apply.

**Related courses:** 2 courses in fields outside of literature selected with the advice and consent of the student's writing major adviser. Recommended are those courses that provide a broad historical background for the study of literature.

#### Minors in English

The department offers both a minor in literature and a minor in writing; both offer experience in reading literary texts and writing critical analysis. Students pursuing either minor will be permitted to preregister in the department after declared English majors do so.

#### Minor in Literature (7 or 8 units)

- 3 or 4 200-level courses: either 210-1,2 or 270-1,2, followed by 298 *or* 206 and 207
- 4 300-level courses, 2 of which must deal with literature written before 1798 and 2 with literature written after 1798. One of these 4 courses may be in comparative literary studies.

#### Minor in Writing (7 units)

- 206 and 207
- 393 or 394 (counting as 3 units) and 2 300-level literature courses, 1 on literature before 1798 and the other on literature after 1798

# **Honors in English**

Literature majors who wish to earn honors may apply during the spring of their junior year for admission to the twoquarter senior honors sequence, 398-1,2, which meets the following fall and winter quarters. All students admitted are expected to produce an honors essay. The sequence is under the general direction of the departmental honors coordinator, while individual students work directly under the guidance of a faculty specialist of their own choosing. A number of collective meetings are held in the fall and winter, first for training in research methods and later for presenting works in progress and discussing common problems. (When special circumstances make participation in the fall-winter sequence impossible, the department may offer several alternative routes, in compliance with Weinberg College guidelines. See the director of undergraduate studies.) Admission to honors candidacy is competitive; candidates should be reasonably certain of attaining at least a 3.4 departmental average by the end of winter quarter of senior year.

Students interested in honors through the writing major should consult with the director of that program. See also Honors under Academic Policies earlier in this section.

#### The Teaching of English

Weinberg College students pursuing a major in English who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

#### **Related Programs**

Department of English courses are used in the American studies, comparative literary studies, and drama programs. Students also may pursue creative writing in courses offered by the writing arts program.

#### **Courses in Composition**

See also the Writing Program in this section of the catalog. **ENGLISH 105-0 Expository Writing** Emphasizes all phases of the composition process, research methods, and critical thinking. Careful review of student papers and reports.

**ENGLISH 106-1,2 Writing in Special Contexts** An introduction to expository writing similar to 105 but paired with a course in another discipline.

**ENGLISH 205-0 Intermediate Composition** Expository writing at an intermediate level. Emphasis on techniques for writing clearly, precisely, and persuasively.

**ENGLISH 304-0 Practical Rhetoric** The theory of writing and skills that underlie good writing; primarily for teachers in secondary schools and universities.

**ENGLISH 305-0 Advanced Composition** For students with previous formal training in composition. Admission by consent of department.

**ENGLISH 307-0 Advanced Creative Writing** For nonwriting majors with previous formal training in creative writing. Admission by consent of department.

# Literature Courses Primarily for Freshmen and Sophomores

Prospective writing majors take both 206 and 207.

**ENGLISH 206-0 Reading and Writing Poetry** Forms and techniques of verse.

**ENGLISH 207-0 Reading and Writing Fiction** Forms and techniques of fiction.

# ENGLISH 210-1,2 English Literary Traditions

Chronological survey of British literature in its cultural contexts from Chaucer to the 20th century. **1.** Chaucer to the late 18th century. **2.** Late 18th century to World War I.

**AF AM ST 210-1,2 Survey of African American Literature** See African American Studies.

**ENGLISH 211-0 Introduction to Poetry** Elements of lyric and narrative poetry, with emphasis on the ways these can create meaning and elicit response.

**ENGLISH 212-0 Introduction to Drama** Fundamental elements of drama as perceived in performance. How a play communicates from text to stage to audience.

**ENGLISH 213-0 Introduction to Fiction** How prose fiction, as practiced by various British and American authors from the 18th century to the present, creates and communicates meaning.

**ENGLISH 234-0 Introduction to Shakespeare** Representative Shakespearean plays.

**AF AM ST 259-0 Introduction to African American Drama** See African American Studies.

**ENGLISH 260-0 Introduction to 20th-Century British Literature** Principal writers and works from 1900 to World War II.

**ENGLISH 270-1,2 American Literary Traditions** Representative writers and works of American literature in cultural context. **1.** Puritans to *Moby Dick.* **2.** Mid-19th century to 1900.

**ENGLISH 273-0 Introduction to 20th-Century American Literature** Principal writers and works since World War I.

**ENGLISH 275-0 Introduction to Asian American Literature** From the early 20th century to the present, covering a range of genres and ethnicities.

**ENGLISH 298-0 Introductory Seminar in Reading and Interpretation** Close reading of literary works in the light of various perspectives in literary study. Prerequisites: 210-1,2 or 270-1,2 (may be taken concurrently with either 210-2 or 270-2).

# Literature Courses Primarily for Juniors and Seniors

**WRITING 301-0 The Art of Fiction** See Writing Arts. **ENGLISH 302-0 History of the English Language** The English language from the earliest times to today.

WRITING 302-0 The Art of Poetry See Writing Arts.

**WRITING 303-0 The Art of Expository Prose** See Writing Arts.

ENGLISH 310-0 Studies in Literary Genres Content varies. ENGLISH 311-0 Studies in Poetry Content varies.

ENGLISH 312-0 Studies in Drama Content varies.

ENGLISH 313-0 Studies in Fiction Content varies.

**ENGLISH 320-0 Medieval English Literature** Representative works in their intellectual and cultural contexts.

**ENGLISH 323-1,2 Chaucer 1.** *The Canterbury Tales.* **2.** *Troilus and Criseyde* and other works.

**ENGLISH 324-0 Studies in Medieval Literature** Content varies.

ENGLISH 331-0 Renaissance Poetry English poetry from

the Elizabethan period to 1660. **ENGLISH 332-0 Renaissance Drama** A survey of English drama (1590–1630) and its cultural contexts.

**ENGLISH 333-0 Spenser** Spenser's major poetry, with emphasis on *The Faerie Queene*.

**ENGLISH 334-1,2 Shakespeare 1.** Principal plays up to 1600. **2.** Principal plays after 1600.

**ENGLISH 335-0 Milton** Milton's poetry, with those parts of his prose that illuminate his poetical and intellectual development.

**ENGLISH 338-0 Studies in Renaissance Literature** Content varies.

**ENGLISH 339-0 Special Topics in Shakespeare** Content varies.

**ENGLISH 340-0 Restoration and 18th-Century Literature** Representative works in their intellectual and cultural contexts.

**ENGLISH 341-0 Restoration and 18th-Century Poetry** Dryden, Pope, and other poets of the period 1660–1744.

**ENGLISH 342-0 Restoration and 18th-Century Drama** English drama from 1660 to the end of the 18th century.

**ENGLISH 343-0 18th-Century Prose** Johnson, Swift, Gibbon, Burke, Wollstonecraft, and other nonfiction prose writers.

**ENGLISH 344-0 18th-Century Fiction** Defoe, Richardson, Smollett, Fielding, Sterne, Burney, Radcliffe, and Austen.

**ENGLISH 348-0 Studies in Restoration and 18th-Century Literature** Content varies: for example, biography and autobiography, literary careers, literature and social criticism. **AF AM ST 349-0 Black Families in Literature** See African American Studies.

ENGLISH 350-0 19th-Century British Literature

Representative works in their intellectual and cultural contexts.

**ENGLISH 351-0 Romantic Poetry** Blake, Wordsworth, Coleridge, Byron, Shelley, and Keats.

**ENGLISH 353-0 Studies in Romantic Literature** Content varies.

**ENGLISH 356-0 Victorian Poetry** The principal British poets from Tennyson to Hopkins.

**ENGLISH 357-0 19th-Century British Fiction** Important and representative novels written between 1800 and 1900.

**ENGLISH 358-0 Dickens** Representative major works of Charles Dickens.

**ENGLISH 359-0 Studies in Victorian Literature** Content varies.

**ENGLISH 360-0 20th-Century British and American Literature** Representative works in their intellectual and cultural contexts.

**ENGLISH 361-1,2 20th-Century Poetry 1.** Major British poets such as Yeats, Eliot, and Auden. **2.** Major American poets from Frost and Robinson to Crane.

**COMP LIT 362-1,2,3 Modern Drama** See Comparative Literary Studies.

**ENGLISH 363-1,2 20th-Century Fiction 1.** Major British novelists from Conrad to World War II. **2.** Major American novelists from James to World War II.

**ENGLISH 365-0 Studies in Postcolonial Literature** Themes, antecedents, and contexts of selected literature produced in societies emerging from colonial rule.

**ENGLISH 366-0 Studies in African American Literature** Content varies.

**ENGLISH 367-0 Postwar British Fiction** Representative British novels since 1945.

**ENGLISH 368-0 Studies in 20th-Century Literature** Content varies.

**ENGLISH 369-0 Studies in African Literature** Twentiethcentury African literature in English.

**ENGLISH 370-0 American Literature before 1914** Intellectual and cultural contexts of American literature from the Puritans to 1914.

**ENGLISH 371-0 American Novel** Writers such as Cooper, Alcott, Chopin, Hawthorne, Melville, Poe, Twain, James, Howells, Crane, Dreiser, and Wharton.

**ENGLISH 372-0 American Poetry** Writers such as Bradstreet, Freneau, Bryant, Poe, Whitman, Dickinson, Robinson, and Frost.

**ENGLISH 375-0 Topics in Asian American Literature** Content varies.

**ENGLISH 378-0 Studies in American Literature** Content varies.

**COMP LIT 382-1,2,3 History of Literary Criticism** See Comparative Literary Studies.

**COMP LIT 383-0 Special Topics in Theory** See Comparative Literary Studies.

**ENGLISH 383-0 Studies in Theory and Criticism** Topics in theory and criticism related to the study of literature and culture. Content varies. COMP LIT 382-1,2,3 recommended but not required.

**ENGLISH 385-0 Topics in Combined Studies** Special topics in literature and related disciplines. Content varies.

**ENGLISH 386-0 Studies in Literature and Film** Content varies.

**ENGLISH 392-0 The Situation of Writing** The sociology of writers, writing, publication, dissemination of literature, and reading.

**ENGLISH 393-FW,TS Theory and Practice of Poetry** 

(1.5 units each) Sequence of two 15-week courses.1. Theory of prosody, including the major form of poetry in English (accentual-syllabic verse) and minor forms (accentual, syllabic, and free verse).2. Intensive writing practice culminating in the production of a long poem. Prerequisite: admission to sequence or writing major.

**ENGLISH 394-FW,TS Theory and Practice of Fiction** 

(1.5 units each) Sequence of two 15-week courses. **1.** Tenets of fictional realism and its substitutes, with practice in different applications of plot, narrative technique, and point of view. **2.** Culminates in the writing of a novella. Prerequisite: admission to sequence or writing major.

**ENGLISH 395-0 Fundamentals of Prose** English prose style and how it works: syntax, diction, figures of speech, irony, rhythm.

**ENGLISH 398-1,2 Senior Honors Sequence** For seniors preparing an honors essay in the literature major. Students pursue individual topics under the careful guidance of a faculty adviser and the general supervision of the departmental honors coordinator. Admission by application. K grade given pending completion of essay.

**ENGLISH 399 Independent Study** Individual projects with faculty guidance. Open to majors with junior or senior standing and to senior minors. May be elected three times, but only one unit at a time. Prerequisite: consent of department or director of writing major.

# **Environmental Sciences Program**

A major challenge facing our species is to learn to understand and coexist with the natural environment. The environmental sciences major is designed to provide students with an understanding of the physical environment and the relations of humans to it. Environmental science necessarily differs from the more traditional divisions of scientific inquiry. The intellectual approach is that of synthesis, where the focus is concentrated on the integration of knowledge rather than on further refinement of knowledge within a particular scientific field. Also, the concern for translating theory into practice requires a strong association with engineering. With this approach, environmental sciences provides a mechanism for motivated students to work in a multidisciplinary framework with a common theme.

The major gives students the expertise to address issues of environmental concern, such as energy options, environmental law, the relation of society and resources, and health problems of air and water pollution, from a scientific basis. It provides a background for employment in environmentally oriented firms or for graduate study in any of several different environmental science disciplines as well as an exceptional preprofessional experience for students interested in law or business.

# **Major in Environmental Sciences**

The major is rigorous but reasonably flexible. It requires a basic grounding in the sciences and mathematics, a core curriculum to introduce environmental problems, courses that consider society's impact on the environment, and a series of advanced courses tailored to each student's interest. This is capped by a senior seminar where students conduct environmental research and present their results.

For a double major and to determine the grade point average in the environmental sciences major, the Foundations in Science and Mathematics courses are not considered major courses but rather courses related to the major.

# **Program courses**

*Foundations in Science and Mathematics:* Basic science and mathematics courses are necessary to understand the environmental sciences; all the courses in chemistry, mathematics, physics, and biological sciences are required for the major.

Foundations in Science (6 or 7 courses)

- CHEM 101; 102; 103 or 171; 172; 210-1
- PHYSICS 130-1,2 or 135-1,2 (GEOL SCI 201 may be substituted for 130-2 or 135-2)
- BIOL SCI 164 or 210-1

Foundations in Mathematics (3 courses): MATH 214-1,2,3

*Core Curriculum:* Physical systems of the environment are emphasized in core courses; any 5 of the following are required for the major:

- BIOL SCI 204
- CHEM 204
- CIV ENG 267
- ENVR SCI 235
- GEOG 211
- GEOL SCI 204 (201 may also be counted if not used under Foundations in Science)
- POLI SCI 204

*Environment and Society:* Society's place in and interaction with the environment are treated in social science courses; any 1 of the following is required for the major:

- ANTHRO 302 or 383
- ECON 370
- GEOG 328

- POLI SCI 371
- SOCIOL 312
- *Advanced Studies:* 4 courses are required, chosen from the following:
- ANTHRO 306, 312, 313, 315
- BIOL SCI 341, 343, 345, 346, 347
- CHEM 329, 342-1, 343
- CIV ENG 358, 359, 360, 361, 363, 364, 366, 367, 368, 370
- ENVR SCI 390 (maximum of 1 credit may be applied toward the major)
- GEOG 341, 343
- GEOL SCI 301, 303, 304, 313, 316, 317, 318, 319

Students who wish to concentrate their course selections within a single science field may pursue an established track in biology, chemistry, or geology. Each track requires 4 courses that are counted as the advanced studies portion of the major. For a detailed description of individual tracks and sample curricula, see the Environmental Sciences Program adviser.

# Environmental Sciences Second Major for ISP Students

The Integrated Science Program is a highly selective BA program in Weinberg College (see Integrated Science Program). Students majoring in ISP who wish to complete a second major in environmental sciences should fulfill the following requirements instead of those listed above. They may not substitute ISP 398 or ENVR SCI 398 for the ISP-required course MATH 391-2 and must take the following additional courses:

- GEOL SCI 201
- BIOL SCI 164
- 2 of the following courses: ENVR SCI 235; GEOG 211; GEOL SCI 204
- 2 courses listed under Environment and Society above
- 2 courses, not in the same department, from those listed under Advanced Studies above, except CHEM 342-1
- Students may take the 2 quarters of ENVR SCI 398 instead of ISP 398

#### Advising and Course Selection

As soon as students have declared a major in environmental sciences, they should consult with the environmental sciences adviser to plan their programs. They should try to complete the foundations in science and mathematics courses by the end of their sophomore year.

Premedical students and students interested in advanced study in environmental biology are advised to take the 200level sequence in biological sciences and one or two additional quarters of organic chemistry.

# **Core Course**

**ENVR SCI 235-0 Atmosphere and Climate** Nature and composition of the atmosphere, principles of atmospheric

motion; frontogenesis; precipitation processes; global patterns of climate and climatic change. Prerequisite: MATH 214-3 or equivalent.

#### Other Courses

**ENVR SCI 390-0 Internship in Environmental Sciences** 

(1–2 units) Participation in off-campus research activities of public and private environmental organizations under the supervision of faculty. Prerequisite: junior or senior standing and consent of program director.

**ENVR SCI 398-1,2 Environmental Research Seminar** Independent research directed by environmental sciences faculty. Research design and scientific communication. Prerequisite: senior standing. Open only to majors.

# **European Thought and Culture**

The series of courses Patterns of European Thought and Culture is a joint enterprise of faculty in classics, the modern language and literature departments, art history, history, music, philosophy, and religion. Through a study of the forms and values of particular ages in their historical context, the courses aim at tracing patterns of social and cultural representation that are shared by different European societies and give to the different eras of European history their temporal boundaries. The courses are frequently team-taught by faculty from different disciplines. The courses meet various distribution requirements in the areas of historical studies, values, and literature and fine arts, but any combination of six may be used to meet all the requirements in those three areas.

#### Courses

**CLASSICS 210-0 Early Western Civilization** See Classics.

**CLASSICS 211-0 Classical Greece** See Classics.

**CLASSICS 212-0 Roman Civilization** See Classics.

**EUR TH 213-0 The Middle Ages** Introduction to the distinctive institutions, political and spiritual horizons, and aesthetic expressions of medieval culture, with special emphasis on the 12th and 13th centuries.

**EUR TH 214-0 The Renaissance** Introduction to some themes associated with the Renaissance, principally humanism, the invention of printing, the discovery of the Americas, the Copernican revolution, the Reformation and Counter-Reformation, and more generally, radically new ways of conceiving the self and its relation to social orders.

**EUR TH 215-0 The Birth of Modernity (1550–1720)** Introduction to the social, political, and intellectual history of Europe from 1580 to 1720, with special emphasis on the change from medieval monarchy to the modern nation state and on the origins of modern philosophy and natural science.

**EUR TH 216-0 The Age of Enlightenment** Introduction to European scientific and philosophical thought in the 18th

century, with special emphasis on natural philosophy and evolving concepts of gender and race.

**EUR TH 217-0 The Romantic Period** Introduction to the romantic movement and the radical shift it introduced in traditional concepts of the self, with special emphasis on philosophy, lyric poetry, and music as dominant cultural forms of this period.

# EUR TH 218-0 Modern Culture: The 19th Century

Survey of 19th-century culture with special emphasis on the political and social consequences of the French Revolution, the Industrial Revolution, and the emergence of the novel as the most characteristic form of artistic expression.

#### EUR TH 219-0 Modern Culture: The 20th Century

Survey of the relationship between history, thought, literature, and the fine arts in the 20th century, with special emphasis on the massive revaluation of traditional norms in modernism, the political implications of philosophic movements (Nietzsche, existentialism), and the impact of mass phenomena (wars, revolution, urban life) on modern experience.

GERMAN 241-1,2 Jews and Germans: An Intercultural History See German.

# French and Italian

Studies in French or Italian provide insight into the language, thought, and character of cultures different from our own. Such knowledge builds an awareness of our own society's diversity and the ways it resembles and differs from others. As the merging of domestic and international events increasingly affects the material and intellectual life of every individual, the ability to communicate with other peoples assumes vital importance. Whether a student is planning a career in teaching, government, science, the professions, or business, the study of a foreign language, literature, and culture is a wise option in a university education.

Programs in the department are varied. Language courses, from the elementary through the graduate levels, develop communication skills that allow students to function at ease with foreign texts or in a foreign environment. Courses in literature and civilization not only broaden and deepen insights into the thought and writing of another culture, they also train students to think independently, to organize and analyze materials thoughtfully, and to discuss ideas effectively.

There is a minor in French, a major in French studies, MA and PhD programs in French, and a minor and a major in Italian. These may be supplemented by foreign study, which allows students to increase their knowledge of a foreign language and society while continuing university work abroad in a variety of fields. It is not necessary to be a major to participate in these programs. An excellent library, modern audiovisual resources, and a learned faculty (of which nearly one-half are native speakers) further strengthen studies in French and Italian.

# French

# **Major in French**

The program for majors in French studies consists of 17 quarter-courses; at least 12 must be at the 300 level. Courses at the 100 level do not count toward the major. Students may count up to 5 200-level courses toward the major. Of the 17 courses, up to 2 may be French department courses taught in English. At least 2 of the 300-level courses must be on literature and culture before 1800. All majors must take 396 and 397 during their senior year.

Students returning from a study abroad program in France will receive up to 8 credits if the content of the courses taken abroad relates in a substantive way to some aspect of French or Francophone culture. All returning students must take 2 units of senior seminar.

#### **Minor in French**

The goal of the minor in French is to give students a solid grounding and good fluency in the French language and to provide a basic familiarity with important aspects of French culture and society. Together these accomplishments will enable students to pursue their interests in French and in countries where French is used.

The minor is designed for students who have a strong interest in French but cannot fulfill the requirements of the French major, either because their knowledge of French was nonexistent or elementary when they came to Northwestern or because they are also engaged in another major with requirements that preclude pursuing a second major. Except for one possible course at the 300 level, all courses are conducted in French, with class discussion and papers also in French.

Students choosing to minor in French are assumed to have completed either 121 or 123 or the equivalent.

#### Minor course requirements (9 units)

- Up to 4 200-level courses: 2 chosen from 201, 202, 203; 2 chosen from 210, 271, 272, 280, 282
- 2 chosen non 210, 271, 272, 280, 282
- At least 5 300-level courses: 2 or 3 chosen from 302-1,2, 303, 305, 309, or 391-1,2; 2 or 3 other courses in literature or civilization, 1 of which may be a French department course taught in English. 309 may be counted either as a language course or as literature or civilization course.

Students returning from a study abroad program must enroll in at least 1 300-level course in the department.

#### Four-Year BA/MA

The department offers a four-year BA/MA program in French for outstanding undergraduate majors. Interested students should consult with the department chair and should refer to Four-Year Master's Programs in the Undergraduate Education section of this catalog.

# **Honors in French**

Students who have a grade point average of 3.4 or higher in the major and are interested in writing an honors thesis should declare their intention of doing honors work no later than the spring quarter of their junior year. They also should consult with the director of undergraduate studies. The honors project is produced through one or two quarters of 399. It can build on previous work done in a 300level course or, with consent of the instructor, in a graduate seminar. These courses will count toward the 17 required credits for the major. See Honors under Academic Policies earlier in this section of the catalog.

#### The Teaching of French

Weinberg College students pursuing a major in French who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

# **Courses Primarily for Undergraduates**

**FRENCH 111-1,2,3 First-Year French** Conversation, grammar, reading, writing for beginners. Five class meetings a week.

**FRENCH 115-1,2 Accelerated First-Year French** For students with some previous experience in French. Review and development of skills in speaking, understanding, and reading as preparation for work at the second-year level. Four class meetings a week. Prerequisite: department placement.

**FRENCH 121-1,2,3 Second-Year French** Grammar review, conversation, reading, writing. Four class meetings a week. Prerequisite: 111 or 115.

# FRENCH 123-0 Second-Year French: Individualized

**Instruction** Intermediate French in a format allowing students a choice of skill concentrations and learning paces. Credit possible for up to three quarters. Prerequisite: department placement.

# **FRENCH 201-0 Introduction to French Studies**

Development of fluency, accuracy, and creativity in speaking, comprehension, reading, and writing French; introduction to social, cultural, and literary topics. May not be repeated for credit. Prerequisite: 121-3 or 123-3, or AP score of 3.

**FRENCH 202-0 Writing Workshop** Practical study of French grammar and structure; students develop and improve writing skills through practice in preparing short compositions. Prerequisite: 201 or AP score of 4, or consent of department.

**FRENCH 203-0 Oral Workshop** Practical course to increase listening comprehension, build vocabulary and idiom use,

and enhance communication skills. Three hours per week. Prerequisite: 201 or AP score of 4, or consent of department.

# FRENCH 210-0 Introduction to French Literature Study

of texts illustrating various genres from the 16th century to the present such as poetry, drama, fairy tale, novel, autobiography. Prerequisite: 202 or AP score of 5, or consent of instructor.

#### FRENCH 211-0 Introduction to French Culture

Introduction to French culture through study and analysis of major themes, issues, and debates that characterize or preoccupy contemporary French thought and society. Presupposes no prior knowledge of French culture or history. Prerequisite: 202 or AP score of 5, or consent of instructor.

#### FRENCH 271-0 Introduction to the French Novel

Fundamental concepts and significant achievements of the French novel. Representative novels chosen from writers of the 17th to the 20th centuries. In French. Prerequisite: 202 or consent of instructor.

**FRENCH 272-0 Introduction to French Theater** Basic concepts and representative works of the French theater with emphasis on the 17th and 20th centuries. Principles of tragedy and comedy; contemporary developments. In French. Prerequisite: 202 or consent of instructor.

# **FRENCH 280-0 French Cultural Studies: Historical**

**France** Major cultural and intellectual problems of France from a historical perspective, such as France in the 19th century, history of gender, rise of the bourgeoisie. Prerequisite: 202 or consent of instructor.

# FRENCH 282-0 French Cultural Studies: Contemporary

**France** Major cultural and intellectual problems of contemporary France, such as the Occupation, Algerian War, racism and immigration, ethnicity and social relations, role of France in a unified Europe. Prerequisite: 202 or consent of instructor.

#### **Courses with Reading and Discussion in English**

No prerequisite in French; readings, discussions, papers, and examinations in English.

**FRENCH 277-0 Sartre, Beauvoir, and Existentialism** Existentialism in its literary, philosophical, and cultural manifestations.

#### FRENCH 279-0 Introduction to French Theater

Representative French plays from the 17th through the 20th centuries; basic concepts of genre; social and historical context. Credit not allowed for both 279 and 272.

**FRENCH 285-0 Reading Paris** Introduction to French culture through an examination, critique, and analysis of texts, historical documents, and images relating to Paris. Extensive use of the Web and other media.

**FRENCH 372-0 Medieval Movies** Films representing medieval and Renaissance culture; films that a medieval viewer would have understood.

**FRENCH 374-0 French Feminist Fiction** Feminist poetry, prose, and experimental texts.

**FRENCH 375-0 French Film** Topics in French cinema: for example, French classical cinema, the New Wave, post-colonial French film, the cinema of Marguerite Duras.

**FRENCH 376-0 Feminist Theory** Introduction to fundamental theoretical texts and basic tenets of contemporary feminist theory.

**FRENCH 378-0 Contemporary Theory** Introduction to some major trends in contemporary French theory and the way they have influenced literary studies in the United States.

#### **Courses with Prerequisites in French**

Students taking these courses are assumed to have completed at least three 200-level courses in French, including 210, unless otherwise stated.

**FRENCH 302-1,2 Advanced Grammar and Composition** Grammar, vocabulary, and discourse features related to a particular linguistic function (such as narrating, describing, persuading) and writing practice to synthesize these elements. Prerequisite for 302-1: 202 or consent of instructor. Prerequisite for 302-2: 302-1.

**FRENCH 303-0 Advanced Conversation** Oral practice based on short readings and spontaneous scenarios. No formal grammar or composition. Language laboratory required. Prerequisite: 302 or consent of instructor.

**FRENCH 305-0 French Phonetics** Study of syllabic division, intonation, rhythm, accent, linking, vowels, consonants. Practical exercises to improve pronunciation.

#### FRENCH 308-0 Advanced French: Dissertation and

**Exposé** Analysis and practice of spoken and written French in formal or academic settings: *la dissertation*, *l'exposé*, *la fiche de lecture*; training in comprehension, oral and written examinations.

**FRENCH 309-0 French in Commerce and Industry** Introduction to fundamentals of the French business world in historic, economic, social, and political contexts. Acquisition of language skills for communication in commerce and business. Prerequisite: 302-1 or consent of instructor.

**FRENCH 310-0 Medieval French Song** Songs of the troubadours; songs of courtly love, social and political songs, women's songs. Study of musical setting and performance. No musical training required.

**FRENCH 312-0 Medieval Heroic Narratives** Epics such as the *Song of Roland*, romances such as *The Story of the Grail*. Texts read in modern French versions.

**FRENCH 320-0 On the Threshold of Modernity: Rabelais and Montaigne** Transition from the Middle Ages to modernity in two major 16th-century artists: Rabelais and optimistic faith in human potential, Montaigne and profound skepticism. In-depth reading of works that speak to the modern condition.

**FRENCH 330-0 Classical Theater and Society** Major 17thcentury dramatic writers, including Corneille, Molière, and Racine, and the social and historical context in which the plays were written and performed.

**FRENCH 335-0 The Literature and Thought of the 17th Century** Major works of poetry, prose, and drama of the 17th century in historical and social context. Content varies; may include Descartes, Pascal, Corneille, and others.

**FRENCH 340-0 Sexual Politics in the Ancien Régime** Literary, intellectual, and political role of women in view of the debates generated by the issues of women's power in the public sphere before and during the French Revolution.

**FRENCH 345-0 La Philosophie des Lumières** Enlightenment thought in philosophical and literary works by Montesquieu, Voltaire, Diderot, and Rousseau, emphasizing political thought, materialism, ethics, and aesthetics.

**FRENCH 350-0 The Rhetoric of Romanticism and of Realism** Representations of 19th-century France, primarily through literary texts; historical and cultural contexts of French romanticism and realism.

**FRENCH 355-0 The Invention of Modernity** Study of the origins of modernity in the 19th century, addressing such issues as the rise of mass culture, urbanization, and the beginnings of consumer society.

**FRENCH 360-0 From Modernism to Postmodernism: Experiments in Narrative Form** Crises and reinventions of French prose from the modernist moment of the early 20th century to the ambiguities of "engaged" literature of the 1930s to postmodernism.

**FRENCH 362-0 The French Avant-Garde** Literary and cultural experiments of the various French avant-garde movements, from dada and surrealism to the theater of the absurd and new wave cinema.

**FRENCH 364-0 Modern French Theater** Examination of major figures and movements in 20th-century French theater considered in light of the social, political, and cultural "modernization" of France over the course of the century.

**FRENCH 366-0 Francophone Literature** Literary traditions of North and sub-Saharan Africa, the Caribbean, and the Indian Ocean. Historical and cultural contexts of literary production; role of oral traditions in intellectual and literary movements.

**FRENCH 380-0 Political and Social Thought in France** An inquiry into the major French political and social trends from the *ancien régime* to the 20th century. The intellectual and cultural framework for study of French political life.

**FRENCH 382-0 Literature and Exoticism** Various modalities of the rhetoric of exoticism throughout the history of French literature and in popular culture.

**FRENCH 384-0 Women Writing in French** Femaleauthored texts analyzed in relation to their respective social, cultural, political, and historical contexts.

**FRENCH 390-0 Topics in Culture** Topics, issues, and questions in French and francophone culture. Content varies:

for example, French and francophone cinema, the intellectual in France. May be repeated for credit with different topic. May have language prerequisite.

**FRENCH 391-1,2 Theory and Practice of Translation** Intensive, advanced, two-quarter course integrates previously acquired skills through the comparative study and translation of English and French. Culminates in individual translation project in second half of second quarter.

**FRENCH 396-0 Contemporary French Thought** An examination of different perspectives and paradigms for understanding literature and culture. Prerequisite: consent of undergraduate adviser.

**FRENCH 397-0 Studies in Literature and Culture** Indepth research and analysis of a problem or topic concerning cultural representation. Prerequisite: consent of undergraduate adviser.

**FRENCH 399-0 Independent Study** Independent reading and research. Topics arranged through consultation with an instructor and approval of the department.

# Italian

# Major in Italian Literature and Culture

The program for majors in Italian literature and culture consists of 14 courses, of which at least 10 must be offered by the Italian department; up to 4 others may be courses dealing with Italian culture offered by other departments, including one or more courses on literary theory. Courses taken outside the department must be approved by the director of undergraduate studies. Of the 10 courses taken in the Italian department, no more than 5 may be courses taught in English. Of the 14 courses required for the major, at least 8 must be at the 300 level; 100-level courses do not count towards the major.

Students returning from a study abroad program in Italy will receive up to 8 credits if the content of the courses taken abroad relates in a substantive way to some aspect of Italian culture. All returning students must take 2 300-level courses in Italian in their senior year.

#### Minor in Italian

#### Minor course requirements (7 units)

The minor in Italian consists of seven courses, of which at least four are at the 300 level. No more than three courses may be Italian courses taught in English. Students returning from study abroad must take at least one 300-level course in Italian in their senior year.

#### **Courses Taught in Italian**

Prerequisite for all 300-level courses taught in Italian: two 200-level courses in Italian or equivalent.

**ITALIAN 101-1,2,3 Elementary Italian** Pronunciation, grammar, composition, reading, and conversation. Drill in language laboratory. Five class meetings a week.

**ITALIAN 102-1,2,3 Intermediate Italian** Grammar review, conversation, composition, and readings in modern prose and drama. Four class meetings a week. Prerequisite: 101-1,2,3 or equivalent.

**ITALIAN 133/134-1,2,3 Intensive Italian** Beginning course designed to complete the work of 101 and 102 in one year. Students must enroll concurrently in 133 and 134, for which they receive two credits per quarter. Five class meetings a week.

**ITALIAN 201-0 Italian through Media** Issues from Italian media; frequent oral and written reports: for instance, America in Italian media, advertising, immigration, youth culture. Students produce a newspaper or newscast at the end of the quarter. Prerequisite: 102-3 or 133/134-3 or equivalent.

**ITALIAN 202-0 Italian through Performance** Practice in spoken Italian through a survey of various performance arts in Italian culture. Content may vary: for example, Italian theater, Italian opera, commedia dell'arte. Prerequisite: 102-3 or 133/134-3 or equivalent.

**ITALIAN 203-0 Creative Writing in Italian** A course meant to improve written Italian through exercises and experiments in a variety of genres and styles. Prerequisite: 102-3 or 133/134-3 or equivalent.

**ITALIAN 301-0 Italian through Cinema** An analytic approach to the language of cinema through a detailed reading of selected films and their scripts. Emphasis on colloquial and dialectal Italian. Students produce script or film treatment at the end of the quarter.

**ITALIAN 302-0 Italian through Translation** An intensive workshop meant to improve spoken and written Italian through the practice of translation.

**ITALIAN 303-0 Reading Italian Cities** An approach to Italian culture and civilization through an exploration of representative Italian cities.

**ITALIAN 304-0 Modern Italian Cultural Studies** Culture of Italy from World War II to the present. Novels, films, popular culture.

**ITALIAN 399-0 Independent Study** Independent reading under supervision. Consult director of undergraduate studies.

# Courses with Reading and Discussion in English

No prerequisite in Italian.

**ITALIAN 270-0 The Arts in Italian Culture** A multidisciplinary survey exploring the development of a wide variety of artistic traditions in Italian culture, including painting, sculpture, architecture, music, opera, fashion, and design.

**ITALIAN 275-0 Dante's** *Divine Comedy* Introduction to the *Divine Comedy*, its artistic and intellectual achievement, and its cultural and historical context.

**ITALIAN 290-0 Memory, Exile, and the Italian Diaspora** The theme of exile in Italian culture; the memory of Italy as it survives in the Italian diaspora, inside and outside Italy. ITALIAN 360-0 From the Avant-Garde to the Postmodern

Major authors and movements animating the modern and contemporary literary scene. Content varies: for example, Futurism, intellectuals and politics from D'Annunzio to Pasolini, feminist Italian fiction, Calvino, Eco, and the postmodern.

**ITALIAN 370-0 Mapping Italian Literature** Major texts of Italian literature read in the context of European and world literature. Content varies: for example, Leopardi and European romanticism; Calvino, Borges, and Pynchon; the Theater of Memory; Svevo and Joyce; futurism.

**ITALIAN 375-0 Topics in Italian Culture** Content varies: for example, perspectives in the Renaissance, Leonardo's method, the Baroque imagination, body and sexuality in Italian culture, Italian women writers, fascism and culture, philosophy and literature.

**ITALIAN 380-0 Topics in Italian Cinema** Introduction to major Italian filmmakers and cinematic trends.

# **Gender Studies Program**

The Gender Studies Program embraces a conceptual framework that includes the study of gender and sexuality from an interdisciplinary perspective. It addresses the complex ways in which women and men, femininity and masculinity, female and male are constructed in specific social, cultural, and historical contexts.

The rich and varied curriculum offers students a range of academic experience, including seminars, fieldwork, performance, and opportunities for original research. Consistently emphasized are the ways in which attention to women's and men's lives and experiences has altered scholarly preconceptions and research methods.

# Adjunct Major in Gender Studies

The gender studies major is an adjunct major. Students majoring in gender studies must also fulfill the requirements of another major in Weinberg College or in any other school in the University. The major in gender studies must show a minimum of nine course not double-counted in any other major.

#### Program courses (at least 11 units)

*Core courses (3):* 3 courses selected from 210, 230, 231, 250, and SOCIOL 216

*Electives (6):* 6 one-quarter courses, at least 4 at the 300-level, focusing on gender; 4 of the 6 courses must be offered by the Gender Studies Program, and others may be gender studies courses or courses from other departments cross-listed under gender studies. Two options are available: 395, 397, or another 300-level course approved by the program director, followed by either (a) 398 and 399 or (b) 1 other 300-level elective course.

Students who choose option (a) will generate an independent research project (a senior thesis) and may be recommended for departmental honors. Students who choose option (b) will not write a thesis and will not be eligible for departmental honors.

Examples of courses that fulfill the elective requirement include but are not limited to the following: • AF AM ST 332 Black Feminist Theory

- ANTHRO 354 Gender and Anthropology
- ECON 213 Economics of Gender
- LING 318 Language and Gender
- Drever 225 Equipine and Eiler
- R/TV/F 325 Feminism and Film/Video (see the School of Speech section of this catalog)

#### **Minor in Gender Studies**

Students may earn a minor in gender studies while simultaneously pursuing a departmental major in any undergraduate school. Students qualify for the minor by satisfactorily completing the requirements listed below and presenting a minimum of five courses not double-counted in their majors.

# Minor course requirements (7 units)

- 2 core courses chosen from 210, 230, 231, 250, and SOCIOL 216
- 5 electives chosen in consultation with an adviser in the Gender Studies Program. At least 3 courses must be at the 300 level; 3 must be gender studies courses; the remaining 2 may be gender studies courses or courses from any department cross-listed under gender studies. Students are encouraged but not required to take 397 as 1 of the 5. For sample electives, see the list under Adjunct Major in Gender Studies.

#### Courses

**GNDR ST 210-0 Gender, Power, and Culture in America** Theoretical, personal, and political issues; connections between gender, race, class, and sexual orientation.

**GNDR ST 230-0 The Roots of Feminism** Introduction to milestone texts in the development of 200 years of British, European, and American feminist thought, with particular attention to emerging arguments and strategies around issues of gender and sexuality.

# GNDR ST 231-0 Gender: Voices and Visions

Representations in art and literature within their historical, social, and political contexts. Theories of spectatorship, resistance, and revision.

# **GNDR ST 250-0 Gender Issues in Science and Health** A focus on aspects of gender in the cultures of science and medicine.

**GNDR ST 375-0 Internship in Gender Studies** Field research and practical work experience in activist organizations; biweekly meeting with the instructor and other interns for discussions of their internship experiences and common readings. Prerequisite: consent of instructor.

**GNDR ST 390-0 Topics in Gender Studies** Topics vary. For example, masculinity; gender, race, and reproduction; gender, law, and public policy; Asian American women's history; women artists and their publics. **GNDR ST 391-0 Writing Women's Lives** Seminar launching each student on a research project that illuminates the life of a woman or group of women. Exploration of archives, theories of the self, and historical contexts. Prerequisite: consent of instructor.

**GNDR ST 392-0 Gender and Autobiography** Investigations of women and men as readers and producers of autobiography. Exploration of memory and construction of self in relation to gender, culture, and ethics. Prerequisite: introductory course in gender studies or consent of instructor.

**GNDR ST 395-0 Sexuality and Its Discontents** Social and historical constructions of sexuality; emergence of lesbianism and homosexuality as categories; issues of sexuality, race, and class; problems of sexual domination and violence. Prerequisite: one introductory course in gender studies or consent of instructor.

**GNDR ST 396-0 Feminist Therapy** Theoretical basis for the feminist critique of traditional psychotherapy. Exploration of problems presented by female clients; gender-related causes and feminist strategies for resolution. Prerequisites: one course in gender studies or psychology; junior/senior standing.

**GNDR ST 397-0 Gender Theory** Issues in gender theory and research methods.

**GNDR ST 398-0 Senior Research Seminar** Students work with an adviser and begin research on a senior thesis project, meeting on a reduced schedule over two quarters. Prerequisites: 397 and consent of instructor.

**GNDR ST 399-0 Independent Study** Individual tutorials or research projects. Prerequisite: consent of instructor.

# **Geography Program**

The Program in Geography offers three types of courses to students who seek a knowledge of the physical earth and its various modes of human occupancy. Introductory courses develop global perspectives on environments that are relevant to many social and physical science fields. Courses in regional geography present a unique way of understanding how nature and culture have interacted over time to give character to specific places or regions. Advanced courses focus on the concepts and techniques of professional geography, especially on the construction of maps and on the uses of maps in solving geographical problems.

Programs of study may lead to a major or a minor in geography. In addition to the following requirements, students majoring in geography also must complete a major in a related social or natural science field.

# **Major in Geography**

**Program courses:** GEOG 210 or ENVR SCI 235; GEOG 341; and 4 additional geography courses, at least 3 of which must be at the 300 level, including 1 unit of research (399) **Related courses:** ECON 201, 202; MATH 214-1,2; STAT 210; or equivalent.

85

#### Minor in Geography

The minor in geography supplements the academic programs of students who major in related social and natural sciences by training them in the theory and method of geographical analysis. In addition to the courses listed below, students choosing to minor in geography must complete MATH 214-1,2 or equivalent.

Minor course requirements (7 units)

- STAT 210
- GEOG 210 or 211 or ENVR SCI 235
- GEOG 341
- 4 additional courses, at least 3 at the 300 level; 1 may be taken in a department or program other than geography on the recommendation of the geography program adviser

# Introductory Courses

**GEOG 210-0 The Natural Environment** Introduction to the physical elements of geography. Major local and global atmospheric processes producing weather and climate. Study of the earth-shaping forces that give rise to the geography of landform features.

**GEOG 211-0 World Biogeography** Geography of the world's major ecosystems based on the global climate model. Physical processes of soil formation and vegetation development in various ecosystems. Human impacts on natural systems resulting from past and present land-use practices.

#### **Regional Geography**

**GEOG 313-0 North America** Detailed study of the regional geography of the United States and Canada. The regional distribution of landform types. Patterns of culture, history, and economic development that underlie the distribution of distinctive lifeways in the two countries.

### **Advanced Courses**

**GEOG 328-0 The Human Use of the Earth** Geography of the earth's natural environments as modified by human agency. Natural versus anthropogenic environmental change. Processes of habitat alteration in hunter-gatherer societies. Impacts of modern agriculture and forestry.

**GEOG 341-0 Principles of Cartography** Design, construction, and use of thematic maps for effective presentation of spatial data. Typography and symbolization. Coordinate systems and map projections. Prerequisite: MATH 214-1.

**GEOG 343-0 Geographic Information Systems** Methods and techniques of digital cartography; encoding and analysis of spatial information; applications to archaeology, environmental sciences, and business geographics. Prerequisite: 341.

**GEOG 399-0 Independent Study** Independent research projects. Open to qualified advanced students with consent of department.

# **Geological Sciences**

The geological sciences use diverse and interdisciplinary approaches to the study of complex physical, chemical, and biological processes occurring on and within the earth. The undergraduate program combines fundamental background in mathematics, physics, and chemistry with courses applying these techniques to geological problems. Undergraduates are encouraged to select individual programs reflecting their scientific interests and career goals, whether graduate study in the earth sciences, professional employment, or advanced study in areas such as management or law.

Undergraduates are involved in the full spectrum of departmental activities beyond class work: research, seminars, field trips, and social functions. The resulting educational environment offers unusual opportunities for motivated and interested students.

#### **Major in Geological Sciences**

**Departmental courses:** 201, 202, and 4 300-level courses. **Related courses** 

- CHEM 101, 102, 103 or 171, 172
- MATH 214-1,2,3, 215, 217, 221
- PHYSICS 135-1,2,3

Chemistry, mathematics, and physics are prerequisites for 200- and 300-level courses and should be taken at the earliest opportunity.

# **Minor in Geological Sciences**

The minor in geological sciences offers students in any major a flexible path to improved knowledge of earth, its processes, and, more generally, earth system science. Students select paths with advice from faculty that emphasize such fields as physical geology, geochemistry, geophysics, or a combination of these.

#### Minor course requirements (6 units)

- 201, 202
- 4 other geological sciences courses at the 200 or 300 level; 3 of the 4 must be at the 300 level. 398 and 399 will not be credited toward the minor.

*Note:* Most 200- and 300-level courses in geological sciences have prerequisites in other disciplines and/or in geological sciences. Students should consult the course descriptions in this catalog for details.

# **Honors in Geological Sciences**

Graduation with honors in geological sciences requires completion of a research project. For more information, consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

# Four-Year BA/MS

Students with a professional interest in the earth sciences and a grade point average of 3.5 or above may be eligible for the four-year BA/MS honors program offered by the Department of Geological Sciences. The department only recommends students for this program; final approval is made by the Graduate School. Students may apply in the spring quarter of their junior year; by the end of that year, applicants should complete all courses required for the major in geological sciences and all (or nearly all) the Weinberg College BA requirements. See Four-Year Master's Programs in the Undergraduate Education section of this catalog and consult with a department adviser.

To fulfill the MS requirements, students must complete • 12 courses approved by the student's advisory committee and bearing graduate credit in science or engineering (MATH 221, CHEM 342-1, and the 4 300-level courses taken for the BA may be counted)

a final independent research report (not necessarily a formal thesis)

# **Geological Sciences Second Major for ISP Students**

The Integrated Science Program (ISP) is a highly selective BA program within Weinberg College. Students majoring in ISP who wish also to complete a major in geological sciences must take 201 and 3 300-level courses in addition to 315. These requirements replace the usual major requirements noted above.

#### **Courses Primarily for Freshmen and Sophomores**

**GEOL SCI 101-0 Earth Processes and Products** Minerals, rocks, and structures of the earth's crust, changes wrought through geologic time. Lectures, laboratory; weekend field trip.

**GEOL SCI 106-0 The Ocean, the Atmosphere, and Our Climate** Physical, chemical, and geological oceanography; emphasis on interactions with the atmosphere and the role of the world ocean in the Earth's climate. Lectures and discussion.

**GEOL SCI 107-0 Plate Tectonics** Drift of continents and spreading of sea floor; pattern of motions; relation to earth-quakes, volcanism, mountains, and the Earth's interior. Lectures and discussion.

**GEOL SCI 110-0 The Earth As a Planet** Origin of the solar system, accretion and differentiation of the Earth, early history of the moon, abundance of elements, geologic time. Lectures and discussion.

**GEOL SCI 111-0 Global Environmental Change** Natural and human causes of change and environmental changes on land, in waters, and in the atmosphere. The Earth system on long and short timescales. Lectures and discussion.

**GEOL SCI 114-0 Uniformity, Catastrophe, and the Meaning of Evolution** Development, application, and impact of uniformitarianism, catastrophism, and evolutionary theory.

**GEOL SCI 201-0 Surface Processes** Mountain building, deformational features, tectonic forces, glaciation, weathering, sedimentation, metamorphism, and volcanism.

Field trip. Prerequisite: CHEM 103, MATH 214-1, or equivalent.

**GEOL SCI 202-0 Earth's Interior** The Earth as a planet: origin, composition, and evolution of the solar system and the Earth; internal structure of the Earth; plate tectonics. Prerequisite: MATH 214-2, PHYSICS 135-1, CHEM 103, or equivalent.

**GEOL SCI 203-0 Earth System History** Evolution of the Earth System and its record through geological time. Interactions among the atmosphere, hydrosphere, sediments, and life on Earth. Prerequisite: 201 or equivalent.

**GEOL SCI 204-0 Environmental Geology** Hazardous earth processes, human interaction with the environment, problems of resource availability and use. Laboratory and one-day field trip. Prerequisites: MATH 214-2, CHEM 103.

**GEOL SCI 288-0 Earth in Science and Art** Major ideas and discoveries behind our understanding of the Earth and its environment. Similarities and differences between the views of the Earth in science and pictorial art. Prerequisite: one college-level course in physics, chemistry, or geological sciences, or consent of instructor.

#### **Courses Primarily for Juniors and Seniors**

GEOL SCI 301-0 Geochemistry of Global Environment

Surficial processes and their geological and biological driving forces (atmosphere-land-water interactions, weathering, geochemical transport, sedimentation). Biogeochemical cycles and their role in the global environment. Prerequisite: 201 or 204.

**GEOL SCI 302-0 Petrology and Mineralogy** Formation and evolution of igneous, sedimentary, and metamorphic rocks. Rock textures, compositions, tectonic settings, and other properties. Characteristic mineral assemblages, properties, processes, and reactions. Prerequisites: 201 or CHEM 103; MATH 214-1; PHYSICS 135-1.

**GEOL SCI 303-0 Hydrogeology** Transport and storage of water on the Earth. Hydrostatics, hydrodynamics, flow models, infiltration, permeability, erosion, sediment transport, sediment dewatering, climate and sea-level changes, resource limitations, and pollution. Prerequisites: 201, MATH 214-3, PHYSICS 135-1, or consent of instructor.

**GEOL SCI 304-0 Coastal Processes** Competition between motions of water, beach, sediments, and crust. Waves, currents, tides. Sediment transport, beach evolution, cliff erosion, sea-level change, coastline and landform development. Processes in Lake Michigan. Prerequisites: 201; MATH 215; PHYSICS 135-1,2,3; or consent of instructor.

**GEOL SCI 307-0 Tectonics and Structural Geology** Deformation of rock masses: strain, fracture, slip, stress, and rheologic regimes; rock structures; folds, faults, foliations; seismic parameters in tectonic studies; orogenic belts and their tectonic evolution. Lectures and lab. Prerequisites: 201, MATH 217, PHYSICS 135-1, or equivalent.

87

GEOL SCI 309-0 Reflection Seismology Acquisition,

processing, and interpretation of reflection seismograms. Hydrocarbon prospecting, structural geology, tectonics, stratigraphy, and deep continental reflection profiling. Prerequisites: MATH 214-3, PHYSICS 135-1, or consent of instructor.

**GEOL SCI 313-0 Sedimentary Geology** Sedimentary rocks; stratigraphy; local, regional and global correlation. Ancient depositional systems; facies analysis in context of tectonic, eustatic, and climatic controls on deposition. Prerequisite: 201 or equivalent.

**GEOL SCI 315-0 Physics of the Earth for ISP** Solid earth geophysics: the Earth's gravity field, the Earth's magnetic field, interior of the Earth, heat flow, elementary wave propagation, plate tectonics. Prerequisite: second-year standing in ISP or comparable background in mathematics and physics.

**GEOL SCI 316-0 Sedimentary Geochemistry** Formation and diagenesis of carbonate, geochemistry of organic matter, petroleum formation, evaporite precipitation, paleoenvironmental reconstruction, isotope, organic, and trace and major element geochemistry. Prerequisites: 201, 313; CHEM 103; or equivalent.

**GEOL SCI 317-0 Paleobiology** Major fossil groups; origin and evolution of life; speciation and mass extinction; evolution of communities and ecosystems. Application of paleobiologic methods to paleoenvironmental reconstruction. Prerequisites: 101, 106, or 111; BIOL SCI 103 or 210-1; or consent of instructor.

**GEOL SCI 318-0 Stable Isotope Geochemistry** Fractionation and distribution of stable isotopes (C,H,N,O,S) in the biosphere, hydrosphere, atmosphere, and geosphere; isotopic biogeochemistry, environmental problems and global climate change. Prerequisites: 201 or 204; 301; 316.

**GEOL SCI 319-0 Field Problems in Sedimentary Geology** Field methods in stratigraphy and sedimentology; interpretation of depositional systems and development of facies models based on field observations. Continuation of 313; 2½-week field trip to Colorado and Utah in early to mid-September, returning in time for beginning of fall classes. Prerequisite: 313.

**GEOL SCI 324-0 Seismology and Earth Structure** Elastic theory, seismic waves, seismometers and seismograms, ray paths, travel times; internal structure of the Earth; earth-quakes: location, characteristics, mechanism, and relation to plate motions. Prerequisites: MATH 221, PHYSICS 135-2.

**GEOL SCI 325-0 Global Tectonics** Kinematics of plate tectonics. Geometry, determination, and description of plate motions. Paleomagnetism, marine magnetism, and hot spots. History of ocean basins and mountain building processes. Prerequisites: 202, MATH 217, PHYSICS 135-2.

GEOL SCI 326-0 Terrestrial Gravity and Magnetism Introduction to theory and applications of potential fields to the study of the Earth; includes Laplace's equation, Newtonian potential, magnetostatic and electrostatic fields, spherical harmonic analysis; applications to calculation and interpretation of gravity and magnetic anomalies, regional and global fields, forward and inverse methods, analytical continuation, and spectral analysis. Prerequisites: 325; MATH 221; PHYSICS 135-1,2.

**GEOL SCI 327-0 Radiogenic Isotope Geochemistry** Use of chemical and isotopic abundances of elements in understanding processes and fluxes that govern chemical evolution of the Earth and the solar system. Prerequisite: 202, CHEM 103, or consent of instructor.

**GEOL SCI 328-0 Geophysical Data Processing** Analysis of seismic and other geophysical data. Sampling, windowing, discrete and fast Fourier transforms, z-transforms, deconvolution, filtering, and inverse methods. Prerequisite: MATH 221.

**GEOL SCI 329-0 Tectonophysics** Quantitative kinematics of distributed deformation within plate boundary zones; gravity field and geoid; principle of isostasy; flexure of the crust and lithosphere. Prerequisites: MATH 221 and PHYSICS 135-2, or consent of instructor.

**GEOL SCI 350-0 Physics and Thermochemistry of the Earth's Interior** Finite strain theory, solid solution thermodynamics, phase transitions, subduction zone processes, seismic velocity structures, mineral equations of state. Prerequisites: CHEM 103, MATH 214-3, PHYSICS 135-1.

**GEOL SCI 398-0 Undergraduate Seminar** Opportunity for advanced work through supervised reading, research, and discussion. Open only by invitation of the department.

**GEOL SCI 399-0 Independent Study** Special problems under direct supervision of one or more staff members. Comprehensive report and examination required. Open with consent of department to juniors and seniors who have completed field of concentration in the department.

#### German

The Department of German offers courses in three separate tracks, giving students a choice in satisfying their educational needs or interests. Courses are designed to

- offer students who select German to fulfill the college language requirement and those who wish to acquire a basic knowledge of the language an opportunity to read modern German prose and to express themselves in German
- provide German majors and minors with a course of study in language, literature, and culture that forms the basis from which they can pursue their interests in specific areas of concentration; the program emphasizes the modern period (18th century to the present)
- provide a basis for the understanding of the intellectual and cultural life of Germany for students who are not proficient in German

#### Major in German

The major in German consists of 17 courses: 12 core courses and 5 in a concentration. Students choose one of five concentrations: critical thought, business studies, German-Jewish studies, history, or language and literature.

Courses indicated as a prerequisite for an advanced course may not be taken for credit after the advanced course has been completed. Students returning from a study abroad program in their junior year must enroll in 1 300-level quarter course in the department.

# Departmental courses

#### Core courses (12)

- Language (4 units):
- 205 (may be repeated for credit with different topic) 203, 208, or 280
- 2 quarter-courses of 391, 1 on advanced grammar and composition and 1 on advanced conversation
- *Literature (3 units):* 3 quarter-courses chosen from 201-1,2,3,4; 204; 215
- *Culture (4 units):* 4 quarter-courses chosen from 301; 310-1,2,3,4; 329; 332
- Modern history (1 unit): HISTORY 344-2 or 349

#### Concentrations

Critical Thought

- German: 301
- Philosophy: 1 quarter-course at the 200 level
- Comparative literature: 3 quarter-courses, 1 chosen from COMP LIT 202 and 280 and 2 chosen from COMP LIT 302, 382, 383, 397, and a graduate seminar

#### **Business Studies**

- German: 1 quarter-course of 280 and 2 quartercourses of 380 (380 may be repeated for credit with different topics)
- Economics: 2 quarter-courses chosen from ECON 201, 202, 306, 310, 311

German-Jewish Studies

- German: 241-1,2
- History: 1 quarter-course chosen from HISTORY 344-1,2, 349
- Religion: 2 quarter-courses chosen from RELIGION 224, 306, 331, 335, 352

#### History

- German: 3 quarter-courses, 2 chosen from 233-1,2 and 250 and either 314 (when it addresses German intellectual history) or 332
- History: HISTORY 338, 344-1
- Language and Literature
- German: 2 quarter-courses, 1 chosen from 201, 205, 208 and 1 chosen from 324, 329, 332
- Linguistics: 3 quarter-courses, 2 chosen from LING 204, 205, 206, 209 and 1 chosen from LING 302, 309, 310, 362

#### **Minors in German**

The Department of German offers two minors: a minor in German and a minor in business German. Each minor consists of nine courses. The minor in German is designed to give students solid language proficiency at the upper level and significant knowledge of German culture. The minor in business German is designed to prepare students for careers in government service or international business or for graduate study in international economics, management, trade, or law.

Courses indicated as prerequisites for advanced courses may not be taken for credit after the advanced course has been completed. Students returning from a study abroad program in their junior year must enroll in one 300-level quarter-course in the department.

#### Minor in German (9 units)

- Language (4 units):
- 205 (may be repeated for credit with different topic) 203, 208, or 280
- 2 quarter-courses of 391, 1 on advanced grammar
- and composition and 1 on advanced conversation
- Literature/culture (4 units):
- 2 quarter-courses chosen from 201-1,2,3,4; 204; 215 2 quarter-courses chosen from 301; 310-1,2,3,4; 329; 332
- Modern history (1 unit): HISTORY 344-2 or 349

#### Minor in Business German (9 units)

- Language (4 units)
- 205 (may be repeated for credit with different topic)2 quarter-courses chosen from 203 or 2082 quarter-courses of 391, 1 on advanced grammar and composition and 1 on advanced conversation
- Business German (3 units): 1 quarter-course of 280 and 380 (380 may be repeated for credit with different topic)
- Economics (1 unit): ECON 201 or 202
- *Literature/Culture (1 unit):* 1 quarter-course chosen from 201-1,2,3,4; 204; 215

#### **Business German Examinations**

Students completing a major with a concentration in business studies or a minor in business German may take one or both of the internationally recognized business German examinations offered through Northwestern. Business German credentials are important in today's job market for two reasons: German is a leading language in the European market, and German corporations have more than 2,500 subsidiaries and affiliations in the United States that employ nearly 600,000 Americans.

Students successfully completing one quarter of 280 may take the Zertifikat Deutsch für den Beruf, an examination developed jointly by the Goethe-Institut and the Deutscher Volkshochschulverband. Students successfully completing two quarters of 380 may take the Prüfung Wirtschaftsdeutsch International, an examination developed by the Goethe-Institut, the Association of German

89

Chambers of Industry and Commerce, and the Carl Duisberg Centers.

For more information on these examinations, see the German department Web page at www.german .northwestern.edu.

# Honors in German

Superior students majoring in German may qualify for departmental honors by completing two quarters of 398 or 399; two quarters of 400-level courses; or one quarter of 398 or 399 and one quarter of a 400-level course. In addition, they must present a research paper at the end of their second quarter of honors study. Interested students should consult with the department's director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

#### The Teaching of German

Weinberg College students pursuing a major in German who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

# Language Courses

**GERMAN 101-1,2,3 Elementary German** German language and culture. Understanding, speaking, reading, and writing of German.

**GERMAN 102-1,2,3 Intermediate German** German language and culture. Understanding, speaking, reading, and writing of German continued. Prerequisite: 101-3 or equivalent.

**GERMAN 105-0 German for Research** (0 units) Introduction to the translation of scholarly and scientific German texts. No prerequisites in the language.

**GERMAN 203-0 Intermediate Conversation** Practical training in communication skills with sole emphasis on listening comprehension and speaking. May be repeated for credit with different materials. Prerequisite: 102-1 or equivalent.

**GERMAN 204-0 Foundations of Literary Study** Bridges the gap between intermediate language courses and 200- or 300-level literary and cultural offerings. Emphasizes skills needed to work with literary, philosophical, and historical texts. May not be repeated for credit. Prerequisite: 102-3 or AP score of 3.

**GERMAN 205-0 Intermediate Grammar and Composition** Practice in the writing of short essays; German grammar and structure. May be repeated for credit with different materials. Prerequisite: 102-3 or equivalent or AP score of 3.

# GERMAN 208-0 German through Reading News

Periodicals Articles of interest in German newspapers, read

and discussed in German, with regular compositions. May be repeated for credit with different materials. Prerequisite: 102-3 or equivalent.

**GERMAN 280-0 German in Commerce and Industry** 

German language study oriented toward business. Emphasizes business-related communicative situations such as social interactions, business travel, oral and written contact with customers, basic sales dialogues, and basic business letters. Prepares students for the Zertifikat Deutsch für den Beruf exam. Prerequisite: one 200-level course in German or very strong performance in 102-3.

**GERMAN 380-0 Advanced German in Commerce and Industry** German language study oriented toward business and economics. Emphasizes review of specialized vocabulary in business and economics and practice of complex communicative situations in international trade, advertising, banking, and management. Other topics include economic geography, retailing, distribution, energy, and transportation. Prepares students for the Prüfung Wirtschaftsdeutsch International exam. May be repeated for credit with different materials. Prerequisite: 280, a second 200-level course in German, and one 200-level course in economics.

**GERMAN 391-0 Topics in Language** Special topics in German language: for example, advanced grammar and composition; translation; advanced translation; stylistics; advanced conversation. May be repeated for credit with different topic.

# Courses in Literature and Culture with Prerequisites in German

**GERMAN 201-1,2,3,4 Introduction to German Literature** Works from the 18th century to the present. Readings, lectures, discussions, and papers in German. Prerequisite: one 200-level course in German or very strong performance in 102-3.

**GERMAN 215-0 Special Studies in German Literature and Culture** Studies of a major author, a prominent theme in German literature or culture, a movement, or a genre. May be repeated for credit with different topic. Prerequisite: 102-3 or equivalent.

**GERMAN 301-0 The Dialectics of German Cultural** 

**Criticism** German cultural life and the nation's political development is marked by the confrontation between proponents of a specifically "German culture" and advocates of an enlightened cosmopolitanism. This course traces this dialectic in German cultural and political life from the 1770s to 1918.

#### **GERMAN 310-1,2,3,4 Epochs of German Culture**

Thought, literature, arts, and music of four epochs of German history in their sociopolitical contexts. **1.** Age of reason and revolution. **2.** Myths and monumentalism. **3.** German literature and politics, 1900–45. **4.** German literature and politics after 1945.

**GERMAN 329-0 Topics in Literature** Readings and discussions of topics in German literature, as announced annually. May be repeated for credit with different topic.

**GERMAN 332-0 Topics in German Studies** In-depth study of pivotal periods in German culture, as announced annually. May be repeated for credit with different topic.

**GERMAN 398-0 Undergraduate Seminar** (1–3 units) Advanced work through supervised reading, research, and discussion.

**GERMAN 399-0 Independent Study** Open to outstanding German majors with senior standing.

#### **Courses with Reading and Discussion in English** No prerequisite in German required.

**GERMAN 210-1,2,3 German Literature in Translation 1.** Drama **2.** The novella. **3.** The novel.

**GERMAN 212-0 Introduction to German Culture and Literature** Topics vary: for example, the fairy tale, Germanic mythology. May be repeated for credit with different topic.

**GERMAN 220-0 The German Film** Topics vary: for example, the pioneer film, "new" German cinema. May be repeated for credit with different topic.

**GERMAN 233-1,2 German History and Culture** German cultural, political, and intellectual history, from its origins to the present. **1.** Reformation to founding of the Empire. **2.** Imperial Germany to the present.

**GERMAN 240-0 The Theme of Faust through the Ages** Faust theme in literature and music through shifting intellectual and social climates from the 16th century to the present.

#### **GERMAN 241-1,2 Jews and Germans: An Intercultural**

History 1. Jewish encounter with German culture: German Jewry from the 18th century to the end of the 19th century, when Jews were granted legal standing as German citizens.2. Jewish culture–German culture: German-speaking Jewry from the late-19th century to 1935.

**GERMAN 250-0 Introduction to Contemporary Germany** German political, social, and cultural scene after 1945. May be repeated for credit with different readings.

**GERMAN 261-0 Turn-of-the-Century Vienna: In Search of New Values** Literature and thought of fin de siècle Vienna and their impact on the modern consciousness. Fiction, poetry, essays, plays by Freud, Schnitzler, Wittgenstein, Hofmannsthal, Musil, Karl Kraus, Schoenberg.

**GERMAN 262-0 Berlin: The Golden '20s** Literature, philosophy, fine arts, and architecture of the Weimar Republic (1918–33) as expressions of its intellectual debates and social upheavals. Remarque, Piscator, Mann, Spengler, the Bauhaus.

### **GERMAN 314-0 German Contributions to World**

**Literature** Topics vary: for example, Rilke's poetry; Nietzsche's influence on literature; Thomas Mann; Hesse, the German novel, and the mystic tradition; German intellectual history. May be repeated for credit with different topic.

**GERMAN 324-0 Modern German Drama** From the perspective of the stage as a "moral institution," plays by authors ranging from Heinrich von Kleist to Peter Weiss.

# Greek

See Classics.

# **Hispanic Studies**

Spanish began its life as a dialect of Latin spoken in the Iberian peninsula, and there it lived for more than a thousand years until, in the 16th century, it spread into the New World and beyond. Today it is a global language, spoken by more than 400 million people. Spanish and its close cousin, Portuguese, are spoken by more people in the Americas than English, and Spanish is spoken by some 30 million people in the United States.

The Department of Hispanic Studies tries to reflect these global realities. The department offers courses in language, literature, and culture that speak to a variety of interests, whether they are focused on the Latin-American world, the Spanish peninsular world, or some aspect of Hispanic culture that cuts across geographic divides. Instruction in most courses is in Spanish, and the development of fluency in reading, speaking, and writing the language is an important goal of courses at all levels.

The major and minor programs offered in Hispanic Studies are flexible and depend on students' initiative to pursue particular interests or areas of interest within a framework of simple rules and subject to the approval of an adviser. Students who study Spanish are also encouraged to study Portuguese.

The Department of Hispanic Studies encourages all its students to pursue study abroad, whether in the Northwestern–University of Seville Exchange Program, the Committee on Institutional Cooperation summer program at the Universidad de Guanajuato in Mexico, or other programs approved by the University's Study Abroad Office.

# Spanish

# **Major in Hispanic Studies**

Departmental courses

- 1 course chosen from 205, 206, 207
- 220
- 3 courses chosen from 250, 251, 260, 261
- 1 course chosen from 302, 303, 304
- 323 and 390
- 1 elective course in Hispanic Studies at the 200 or 300 level

• 5 300-level courses in Hispanic Studies that form an area of concentration to be developed in consultation with and subject to the approval of an adviser

**Related courses:** 4 courses in such areas as history, political science, sociology, or anthropology constituting a coherent pattern of study and approved by an adviser.

#### Minor in Hispanic Studies

Prerequisite: 102-3 or equivalent

Minor course requirements (8 units)

• 4 courses at the 200 level

• 4 courses at the 300 level

#### **Honors in Hispanic Studies**

Seniors with strong academic records my qualify for departmental honors by designing and completing a research project on a topic of their choice under the supervision of an adviser. The award of honors is made by a committee of Weinberg College on the recommendation of the department. Students who desire more information about honors in Hispanic studies should contact their advisers.

# The Teaching of Spanish

Weinberg College students pursuing a major in Spanish who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

#### **Courses Primarily for Undergraduates**

**SPANISH 101-1,2,3 Elementary Spanish** Pronunciation, grammar, translation, and easy conversation. Five class meetings a week. Drill in language laboratory.

**SPANISH 102-1,2,3 Intermediate Spanish** Grammar review, conversation, composition, and readings in modern prose and drama. Four class meetings a week. Prerequisite: 101 or two units of Spanish.

**SPANISH 115-1,2 Accelerated First-Year Spanish** For students with some previous experience in Spanish. Pronunciation, grammar, and easy conversation. Four classes per week plus one hour in the language laboratory. Prerequisite: department placement.

**SPANISH 123-1,2,3 Intermediate Spanish: Individualized Instruction** Intermediate Spanish in a format allowing students to set their own pace and concentrate on skills of their choice. Prerequisite: departmental placement.

**SPANISH 205-0 Reading and Speaking Spanish** Practical training with emphasis on listening comprehension, command of idioms, and conversational grammatical structures as well as vocabulary building through conversation and

reading of diverse contemporary materials. Prerequisite: 102-3 or equivalent.

**SPANISH 206-0 Reading and Writing Spanish** Practical training with an emphasis on writing, grammar, and vocabulary building through readings in materials relating to the social sciences, politics, and the arts. Prerequisite: 102-3 or equivalent.

**SPANISH 207-0 Spanish for Bilingual Speakers** A course for native speakers without schooling in Spanish. Emphasis on writing, syntax, and formal modes of the language. Prerequisite: consent of department.

**SPANISH 220-0 Introduction to Hispanic Studies** Analysis of literary forms and literary texts in social and historical contexts. Taught in Spanish. Prerequisite: 205, 206, or equivalent.

**SPANISH 250-0 Spanish Literature and Culture before 1700** Main currents of Spanish literature and culture in Spain before 1700. Taught in Spanish. Prerequisite: one 200-level course or equivalent.

**SPANISH 251-0 Spanish Literature and Culture since 1700** Main currents of Spanish literature and culture in Spain since 1700. Taught in Spanish. Prerequisite: one 200-level course or equivalent.

SPANISH 260-0 Latin American Literature and Culture before 1888 Main currents of Spanish literature and culture in Latin America before 1888. Taught in Spanish. Prerequisite: one 200-level course or equivalent.

**SPANISH 261-0 Latin American Literature and Culture since 1888** Main currents of Spanish literature and culture in Latin America since 1888. Taught in Spanish. Prerequisite: one 200-level course or equivalent.

#### **Courses with Reading and Discussion in English**

These courses are not available for major or minor credit. **SPANISH 223-0 Cervantes** *Don Quixote* and selected works in translation. Reading and discussion in English.

**SPANISH 243-0 Contemporary Spanish American Prose Fiction** Selected works by 20th-century Spanish American authors in translation. Reading and discussion in English.

**SPANISH 397-0 Topics in Hispanic Studies** Aspects of the literatures and cultures of the Spanish- and Portuguese-speaking worlds. Reading and discussion in English. Content varies. May be repeated for credit with different topics.

#### **Courses with Prerequisites and Taught in Spanish**

Unless otherwise noted, the prerequisites for these courses are four 200-level courses in Spanish, including 220.

**SPANISH 302-0 Advanced Grammar** Practical training in grammar and syntax at an advanced level. Prerequisite: 205, 206, or 207.

**SPANISH 303-0 Advanced Conversation** Practical training in conversation at an advanced level. Prerequisite: 205, 206, or 207.

**SPANISH 304-0 Topics in Language** Special topics in grammatical, historical, or other linguistic aspects of Spanish. Prerequisite: 205, 206, or 207.

SPANISH 320-0 Golden Age Poetry and Prose, Excluding Cervantes Development of the Italian school of poetry, mysticism, Gongorism, and the picaresque novel.

**SPANISH 321-0 Golden Age Drama** Antecedents and development of drama of the Golden Age.

SPANISH 323-0 Cervantes The works of Cervantes, with special emphasis on *Don Quixote*.

**SPANISH 332-0 Topics in 19th-Century Spanish Literature and Culture** Development of the novel and other topics. May be repeated for credit with different topic.

**SPANISH 333-0 Topics in 20th-Century Spanish Literature and Culture** Topics vary. May be repeated for credit with different topic.

**SPANISH 340-0 Latin American Literature and Civilization before 1888** The colonial period and the 19th century.

SPANISH 341-0 The Modernist Movement in Latin American Literature Spanish American literature from 1888 to 1920.

**SPANISH 342-0 Latin American Drama** Spanish American drama of the 19th and 20th centuries.

**SPANISH 343-0 The Avant-Garde and Regionalism in Latin American Literature** Latin American literature from about 1915 to 1950.

**SPANISH 344-0 Contemporary Latin American Literature** Latin American literature from 1950 to the present.

SPANISH 350-0 Spanish Culture and Civilization Historical and social backgrounds of Spanish civilization.

**SPANISH 351-0 Latin American Culture and Civilization** Historical and social backgrounds of Latin American civilization.

**SPANISH 380-0 Critical Analysis** Theories and methods of literary analysis. Close reading of representative texts.

**SPANISH 390-0 Undergraduate Seminar** Topic varies. Open to qualified seniors.

**SPANISH 395-0 Special Topics in Hispanic Studies** Topic varies. May be repeated for credit with different topics.

**SPANISH 397-0 Special Topics in Hispanic Studies** 

Aspects of the literature and cultures of the Spanish- and Portuguese-speaking worlds. Reading and discussion in English. Content varies. May be repeated for credit with different topics.

**SPANISH 399-0 Independent Study** Independent reading under supervision. Consult with director of undergraduate studies.

# Portuguese

# Courses

**PORT 101-1,2,3 Intensive Elementary Portuguese** Rapid audiolingual study of the Portuguese language followed by readings from Portuguese and Brazilian writers. No prerequisite in Portuguese.

**PORT 303-0 Advanced Portuguese** Development of competence in four areas of foreign language proficiency. Readings focus on Brazilian historical, cultural, and sociopolitical structures. Prerequisite: 101-3 or equivalent.

**PORT 399-0 Independent Study** Independent study under supervision. Consult with the director of undergraduate studies.

# History

The Department of History is distinguished by the breadth of its faculty's expertise. The faculty includes nationally distinguished scholars in United States, European, Latin American, African, and Asian history. These faculty resources enable the department to offer major fields of study in the history of the Americas, English/European history, African/Middle Eastern history, and Asian/Middle Eastern history. The department is particularly strong in social, cultural, and intellectual history.

Most history courses are open to any undergraduate. Few have specific prerequisites, although freshmen are generally advised to try 100- and 200-level courses before attempting 300-level courses. History majors have priority in registering for classes, but the majority of students enrolled in most history courses are majoring in other departments and schools. The history faculty welcomes this diversity of students.

As all courses listed below cannot be given in any one year and the quarters in which they are offered are subject to change, see the *Class Schedule* for actual offerings.

#### **Major in History**

The purpose of the major is to help students understand themselves as products and makers of history by introducing them to historical patterns and problems in a variety of areas and periods as well as to different historical materials and techniques of analysis. It encourages students to learn to think critically and to search deeply in at least one area of concentration. Achievement of these goals depends heavily on effective use of faculty advice, and each student should see his or her adviser as soon as one is assigned. Thereafter, each student should confer with the adviser at least once each quarter to ensure smooth progress through the program of study.

Students majoring in history select one of four

concentrations:

- History of the Americas
- English/European history
- African/Middle Eastern history
- Asian/Middle Eastern history

93

Students may arrange to emphasize certain special fields within the context of one of these four areas.

The program for majors consists of 11 graded quartercourses in history and 5 graded quarter-courses in related subjects, none of which may be substituted by advanced placement credits. These courses, chosen by the student in consultation with the adviser, are distributed as follows.

# Departmental courses (11 units)

- 2 undergraduate seminars: 395 plus 1 chosen from 101, 102, 392, 393
- 9 200- or 300-level quarter-courses: 5 in one of the four areas of concentration listed above and 4 that lie outside the area of concentration and are distributed to provide both geographical and chronological variety
- 2 of the 11 courses must be a trailer seminar, preferably taken in the junior or senior year. (The trailer seminar consists of 2 courses: a lecture course plus a linked 395 seminar in a subsequent quarter. The trailer seminar need not be within the student's concentration.)
- At least 2 of the 11 courses must be in fields other than modern European or United States history. Such courses might be in the history of Europe before 1800 or in African, Asian, or Latin American history in any period.

### Related courses (5 units)

 5 quarter-courses of related subjects at the 200 or 300 levels, at least 2 of which must be at the 300 level and must be chosen from at least two programs or departments in the social sciences and humanities. The courses should bear some coherent relationship to the student's major program. Students are encouraged to discuss their related courses with their advisers.

# **Minor in History**

The minor in history encourages students majoring in other fields to study history and to organize their historical studies in a coherent way. The structure of the minor requires students to gain both depth and breadth in history. Students must select a concentration, which enables them to acquire significant knowledge of one area of the world, and take courses outside the concentration, which encourages an understanding of diverse cultural contexts.

# Minor course requirements (7 units)

- 7 history courses at the 100, 200, or 300 level; at least 3 must be at the 300 level
- 4 of those 7 courses must be in one of the following areas of concentration: Europe, including Britain United States Latin America Asia
- Middle East
- Africa
- At least 2 of those 4 courses must be at the 300 level
- 3 of the 7 courses must be outside the area of concentration

# **Honors in History**

Superior students may qualify for departmental honors by enrolling in the honors seminar (398-1,2,3) during their senior year and completing a senior thesis judged to be of honors quality. See Honors under Academic Policies earlier in this section of the catalog.

# The Teaching of History

Weinberg College students pursuing a major in history who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

# **Introductory Colloquia**

The following two courses are colloquia, each limited to 15 undergraduates, which introduce students to modes of historical analysis through the study of various topics in history. Specific subjects will be listed in the *Class Schedule*. Open to freshmen and sophomores only.

# HISTORY 101-0 Introduction to Historical Analysis: European History

### HISTORY 102-0 Introduction to Historical Analysis: American History

#### Africa

HISTORY 255-1,2,3 Background to African Civilization and Culture Historical approach to society, economy, polity, and culture in Africa. 1. Origins of humankind to the mid-18th century. 2. Mid-18th century to 1900. 3. 1900 to the present.

**HISTORY 355-0 Islam in Africa** The spread of Islam in Africa, 7th century–present: a thematic approach emphasizing African Muslim scholars and reformers.

**HISTORY 356-1,2 History of South Africa 1.** From the African iron age to the establishment of the multinational gold mining industry, emphasizing the rise of African states and the contest for land with white settlers. **2.** Emphasis on the 20th century, the rise of African nationalism, and the clash with the apartheid state.

HISTORY 357-0 East Africa Selected topics in the history of Kenya, Uganda, and Tanzania.

**HISTORY 358-1,2 West Africa** Selected topics in West African history: economy, society, and government.

#### Asia

**HISTORY 281-0 Chinese Civilization** Chinese history from antiquity to the 18th century, emphasizing cultural and intellectual history.

**HISTORY 284-0 Japanese Civilization** Japanese history from antiquity to the 19th century. Integrates economic, political, intellectual, social, and cultural trends. **HISTORY 285-0 Indian Civilization** History of Hindu culture from antiquity to the 20th century. Change and continuity in religious ideas, practices, institutions, caste, and family life.

**HISTORY 381-1,2 Late Imperial and Modern China 1.** 1700–1911. **2.** 1911–present.

**HISTORY 384-1,2 History of Modern Japan 1.** Japan: the modern state, 1860–1943. **2.** Postwar Japan, 1943–1980s.

**HISTORY 385-0 History of India** India since the mid-18th century. Focus on Hindu and Islamic cultural renovation movements, the politics of nation-building, and socio-economic change.

#### **England and the British Isles**

**HISTORY 260-1,2 British History, 1066 to the Present 1.** The British Isles from the Norman Conquest to the Glorious Revolution. **2.** Britain from the Glorious Revolution to the 21st century.

**HISTORY 362-1,2,3 Modern British History 1.** Social, political, and institutional history, 1688–1815. **2.** The age of industrialization and liberalism, 1780–1900. **3.** The welfare state, democracy, and total war, 1900–present.

**HISTORY 363-0 Modern Ireland in Historical Perspective** History of Ireland from the Celts to the "troubles" in Northern Ireland; emphasis on 19th and 20th centuries.

HISTORY 364-1,2 Social and Intellectual History of Modern Britain 1. Rise and fall of Victorian culture, 1780–1900. 2. Main themes in 20th-century society and thought, 1900–present.

# Europe

**HISTORY 201-1,2 European Civilization 1.** Culture and structure of preindustrial society, high medieval through mid-18th century. **2.** Impact of industrial and political change and development of modern society to the present.

HISTORY 332-1,2,3 The Development of Medieval Europe 1. Early Middle Ages, 300–1000. 2. High Middle Ages, 1000–1300. 3. Late Middle Ages, 1300–1500.

**HISTORY 333-0 The Age of the Renaissance** Decline and revival of European civilization, 1350–1530. Cultural, political, economic, and social developments.

**HISTORY 334-0 The Age of the Reformation** Europe in the 16th century, especially origins, evolution, and effects of changes in religion.

**HISTORY 337-0 History of Modern Europe** Survey of the political and social history of Europe between 1815 and 1945, with special emphasis on the political integration and disintegration of the Continent and the causes and effects of social and economic change.

**HISTORY 338-1,2 Europe in the 20th Century** Growth of mass politics, fascism, the home fronts, rise of the welfare state, loss of empire, economic resurgence and integration. **1.** 1900–45. **2.** 1945–present.

#### HISTORY 342-1,2,3 History of Modern France

The old regime and the French revolution, 1715–99.
 19th-century France. 3. 20th-century France.

**HISTORY 343-0 Modern Italy** Italy from the Enlightenment to the present, concentrating on the *Risorgimento*, the World Wars, Mussolini and fascism, the postwar economic miracle, and terrorism.

HISTORY 344-1,2,3 Modern Germany German social, economic, political, and cultural developments since 1815. 1. 1815–1918. 2. 1918–45. 3. 1945–present.

**HISTORY 345-1,2,3 History of Russia 1.** Emergence of the Kievan and Muscovite states, 800–1700. **2.** Russia from Peter to the Revolution, 1700–1917. **3.** The Soviet Union and its successor states, 1917–present.

**HISTORY 346-0 East Central Europe since 1945** The history of East-Central Europe from the World War II to the collapse of Soviet rule and beyond.

**HISTORY 349-0 History of the Holocaust** Origins and development of the massacre of European Jewry during World War II.

**HISTORY 350-1,2,3,4 The Intellectual History of Europe 1.** Heritage from antiquity and the Middle Ages. **2.** From the Renaissance to the end of the 18th century. **3.** 19th century. **4.** 20th century.

**HISTORY 351-0 History of Communism** Marx's Marxism and movements and regimes that have claimed to be Marxist. Specific content varies.

# Latin America

HISTORY 291-0 Core Seminar in Latin American-

**Caribbean Studies** Option for core seminar requirement in Latin American and Caribbean studies program. Also open to other students, but a reading knowledge of Spanish or Portuguese is desirable. Prerequisite: consent of instructor.

**HISTORY 365-0 The Formation of Latin American Society** Development of Latin American socioeconomic structures, political institutions, and cultural tendencies from the pre-Columbian and Iberian backgrounds through the colonial period.

**HISTORY 366-0 Latin America in the Independence Era** The 18th-century background to Latin American independence and its 19th-century aftermath. The process of achieving independence, changing social structures and economic patterns, and the problem of forming new nations.

**HISTORY 367-0 Politics and Development in Latin America** Political, economic, and social problems since 1880, with emphasis on the period since 1930. Interaction between economic change and politics of rapidly urbanizing societies.

**HISTORY 368-1,2 Revolution in 20th-Century Latin America 1.** Mexico and its revolutions. Mexican history, from the modernizing regime of Díaz, through the revolutionary upheaval and the consolidation of a new regime, to

95

contemporary problems. **2.** Comparative study of the origins and aftermaths of major 20th-century revolutions in Bolivia, Cuba, and Central America.

#### Middle East

**HISTORY 270-0 Islam in History** Influence of Islam on the components of Middle Eastern societies (nomads, agrarian and urban populations) from the inception of the faith (7th century A.D.) to the modern period.

**HISTORY 274-0 History of Ancient Egypt (3100–30 B.C.)** The Old Kingdom: centralized government, divine kingship. The Middle Kingdom: new monarchic principles in the aftermath of social disorder. The New Kingdom: imperialism in response to foreign aggression, religious revolution of Akhenaton.

HISTORY 370-1,2,3 History of the Islamic Middle East

1. 600–1200: the classical Islamic community; medieval Islamic civilization. 2. 1200–1789: the great empires — Mamluks, Ottomans, and Safavids; cultural and economic decline. 3. 1789–present: Jewish and Arab nationalism, oil diplomacy, Islam in the modern context.

**HISTORY 371-0 Islamic Institutions** Religious, legal, political, and socioeconomic institutions of traditional Muslim societies. Regional and cultural variations of principles and concepts common to all Muslims. Modernization and religious reform.

HISTORY 374-0 Historical Background of Jewish-Muslim

**Relations** Formation of Jewish-Muslim relations in the medieval Near East; process by which a common heritage became a basis for contention as well as mutual understanding.

# **United States**

#### HISTORY 210-1,2 History of the United States

Interpretative survey from the 17th century to the present. **1.** Colonial settlements to the Civil War. **2.** Reconstruction to the present. Lectures, discussion sections.

#### HISTORY 211-1,2 Problems in United States History

Basic problems in U.S. history, 17th–20th centuries.
1. First European and African migrations to the American Civil War. 2. Civil War to the present. For students with a strong secondary-school preparation or special motivation.

**HISTORY 214-0 Asian American History** Introduction to the history of Asians in the United States, with a focus on their impact on American society as well as their experiences within the United States.

#### HISTORY 301-1,2 Survey of African American History

Slavery: forms of oppression and resistance, 1700–1861.
 From the Civil War and reconstruction to school desegregation, 1861–1954.

**HISTORY 303-1,2 American Women's History** Women and gender in American life, with attention to differences among women based on class, race, and ethnicity. **1.** To 1890. **2.** Since 1890. **HISTORY 305-0 American Immigration** Origins, social characteristics, cultural values, and assimilation of immigrants in the 19th and 20th centuries. Consequences of immigration in comparative and historical perspective.

**HISTORY 306-1,2 History of the American South** From colonial settlement in the 17th century to the civil rights movements of the 1950s and '60s. **1.** The rise of slavery and the plantation system, formation of slave family and culture, sectional conflict, the Civil War, and emancipation. **2.** Reconstruction, segregation, and civil rights movements.

**HISTORY 310-1,2 Early American History 1.** Cultural and social development of England's mainland colonies from the reign of Queen Elizabeth to 1750. **2.** Creation of a new republic: from revolution to the Constitutional Convention.

#### **HISTORY 314-0 The Civil War and Reconstruction**

"Middle period" of American history, emphasizing origins of the Civil War, its revolutionary nature, and its immediate and long-term consequences for the South and the nation.

HISTORY 315-1,2,3 The United States in the 20th Century America's domestic history and role in world affairs since 1900. 1. 1900–29. 2. 1929–60. 3. 1960–present.

HISTORY 317-1,2,3 American Cultural History Changing values of the American people, how they have been transmitted, and how they have shaped American society, politics, and the economy. 1. 1607–1820. 2. 1820–1890. 3. 1890–present.

HISTORY 318-1,2 Legal and Constitutional History of the United States 1. Development of legal institutions, constitutionalism, law and social change, law and economic development, colonial–1857. 2. Law in industrial society: administration, race relations, corporations, environmental protection, civil liberties, 1857–present.

# HISTORY 319-1,2,3 History of American Foreign

**Relations** Evolution of American foreign policy, emphasizing domestic and international background and constitutional and military problems involved in planning policy. **1.** 1763–1900. **2.** 1900–45. **3.** 1945–present.

#### HISTORY 321-1,2 A History of American Society

Organization and development of American society from the 18th century to the present. **1.** Problems of cultural diversity and social consolidation, 1760–1880. **2.** Problems of class and power, 1880–1970.

**HISTORY 322-1,2 Development of the Modern American City** Characteristics of urban society in America from the period of settlement to the present. **1.** To 1870. **2.** 1870– present. Prerequisite for 322-2: 322-1 or consent of instructor.

# **HISTORY 323-0 Development of American Political**

**Thought** Major strands of American political thought from the revolutions of the 17th and 18th centuries to the 20th century. Changing meaning of liberalism; relationship between political ideology and society.

#### **HISTORY 324-0 American Lesbian and Gay History**

Gender, sexuality, and the rise of modern lesbian and gay identities. Lecture and discussion.

#### **History of Science and Technology**

# HISTORY 275-1,2 History of Western Science and

Medicine 1. Origins of science and medicine in early modern Europe: science, religion, and cosmology; anatomy and sexual difference; the Enlightenment and social science.2. Modern science and medicine in Europe and America: quantum physics and the A-bomb; Darwinism, genetics, and eugenics; DNA typing and "racial science."

# HISTORY 325-0 History of American Technology

American history through its material culture; industrialization and its discontents; consumer culture and household technology; mass communication and democracy; technological utopia and the computer revolution.

# HISTORY 375-1,2 Technology: History, Society, and

**Economy** Economic, cultural, and intellectual aspects of the history of technological change, including non-Western technologies, from medieval Europe to America. Students must enroll in both quarters, receive a grade of K for work completed in the first quarter, and letter grades for both quarters determined by the second-quarter final research project. Prerequisites: 201 and 202 *or* ECON 201 and 202 *or* consent of instructor.

# HISTORY 376-1,2 Science and Modern Society 1. Rise

of science in early modern Europe and colonial America; relationship with philosophy, theology, and Enlightenment culture; science, society, and utopian thought. **2.** Science in Europe and America, 1800–present: physical sciences and the power to transform the world; biological and medical sciences and changing social values.

# **Courses Primarily for Majors in History**

**HISTORY 391-0 Special Lectures** Lecture courses given on special topics not covered in regular course offerings. Content varies. May be repeated for credit with consent of department.

**HISTORY 392-0 Topics in History** Advanced work through reading, research, and discussion in area of special significance. Graduate students permitted in some courses. Pre-requisite: consent of instructor.

**HISTORY 393-0 Seminar in Historical Writing** Advanced work in the research, organization, and writing of selected subjects. Prerequisite: consent of instructor.

# **GEN LA 393-0 Chicago Field Studies Internship** See General Studies.

**HISTORY 395-0 300-Trailer Seminar** Research seminar linked to and following a designated 200- or 300-level history course; students research and complete a term paper on topic of choice related to prerequisite. Prerequisite: completion of a designated 200- or 300-level lecture course. **HISTORY 398-1,2,3 Honors Seminar** Advanced work through supervised reading, research, and discussion. Admission by written application, to be reviewed by department. Grade of K given in 398-1 and 398-2.

**HISTORY 399-0 Independent Study** Reading and conferences on special subjects for advanced undergraduates. Open only with consent of student's adviser and instructor.

# Undergraduate Leadership Program Course

**HISTORY 295-0 Leaders in History** Emphasis on the historical context within which leadership is exercised. Figures, periods, and cultures vary from year to year.

#### **Related Courses in Other Departments**

A history major may take no more than two quarter-courses listed below to satisfy the 11-course history requirement.
AF AM ST 214-1,2 History of Racial Minorities in North America
CLASSICS 211 Classical Greece
CLASSICS 212 Roman Civilization
CLASSICS 321-1,2,3 Roman History
ECON 315 Topics in Economic History
ECON 318 History of Economic Thought
ECON 321 African American Economic History
ECON 323-1,2 Economic History of the United States
ECON 324 Western Economic History

# Humanities

### Kaplan Center for the Humanities

The humanities are those branches of knowledge that are concerned with human thought and culture, including the traditional liberal arts such as philosophy, literature, and art. They can also include fields of study that are classified as social sciences, in particular history and art history, as well as some aspects of anthropology, sociology, and psychology.

The Alice Berline Kaplan Center for the Humanities fosters interdisciplinary conversation among humanists working with different materials and texts. Each year the center announces an interpretive theme, which is designed to spark wide-ranging interdisciplinary debate among Northwestern faculty and students. The center offers two yearlong seminars, one at the graduate level and the other for undergraduates, as well as four junior/senior seminars each year. It administers an internship program that places undergraduates in Chicago humanities and arts institutions. It also offers undergraduates a minor in advanced interdisciplinary studies in the humanities.

For more information, visit the center Web site at www.northwestern.edu/humanities, call 847/491-7946, e-mail hum@northwestern.edu, or visit the center at 2010 Sheridan Road, Evanston, Illinois.

# **Minor in Humanities**

The minor in advanced interdisciplinary studies in the humanities trains humanities and social science majors in interdisciplinary methods, topics, and theories and exposes them to contemporary developments and debates in disciplines other than their own.

The minor complements existing majors in small departments, which are often restricted in the diversity and range of their seminar offerings, and in large departments, which may find it difficult to make special provision for their students planning to continue graduate studies.

# Minor course requirements (6 or 7 units)

- 395-1,2,3 (3-quarter sequence, counts as 1 unit)
  3 quarter-courses chosen from 301 and/or 302 (3 units)
- Option A or B (2 or 3 units)

*Option A:* 3 300-level humanities courses approved by the center; these may include 390 and 399 *Option B:* 1 300-level humanities course approved by the center and 395-1,2,3 (3-quarter sequence, counts as 1 unit) with a different topic than that of the aboverequired 395

Students applying for the minor must present records showing that at least 5 courses have not been doublecounted in their major. Students pursuing a minor in advanced interdisciplinary studies in the humanities must consult with the associate director of the center to establish their program.

Sample program: 2 yearlong 395 seminars on themes such as black identities, race, and modernity or media on the American landscape; 2 units of 301 and 302; and 1 390 internship — for instance, at the Art Institute of Chicago or the Newberry Library.

#### Courses

**HUM 301-0 Topics in the Humanities** Interdisciplinary issues and current research in the humanities, such as politics of commemoration and arts of remembrance; Western visions of maternity, sexuality, and family; Freud and psychoanalytic theory. May be repeated for credit with change in topic.

**HUM 302-0 New Perspectives in the Humanities** New issues in the humanities and current innovative research, for example, philosophy and time; Hegel, Nietzsche, and Heidegger; imagining other worlds (readings in early science and science fiction); fairy tales, theories, and rewritings. May be repeated for credit with change in topic.

**HUM 390-0 Humanities Internship** Placement at Chicago cultural institutions such as the Chicago Humanities Festival, Art Institute, Lyric Opera, or Newberry Library for approximately 10 hours per week; entails a research project supervised by a Northwestern faculty mentor. Prerequisites: grade point average of 3.0 or higher and consent of center.

**HUM 395-1,2,3 Humanities Seminar** Yearlong interdisciplinary course developed around campus visits by six eminent humanists from various fields who address questions related to an annual theme — e.g., arts and publics; black identities, race, and modernity; and media on the American landscape. Two credits for successful completion of sequence. Prerequisite: consent of center.

HUM 399-0 Independent Study

# Integrated Arts Program

The interschool Integrated Arts Program offers courses leading to a minor that explore the creative process from the perspective of the artist in the disciplines of theater, visual arts, music, dance, and media arts. (See Integrated Arts Program in the Other Undergraduate Programs section of this catalog.)

# **Integrated Science Program**

The Integrated Science Program (ISP) is a highly selective curriculum of natural sciences and mathematics presented predominantly in small classes at an accelerated pace. ISP courses emphasize the common base and interrelationships of the sciences, including the importance of mathematics and the development of first principles, leading to advanced topics at the forefront of science today. The goal is to provide students who are interested in careers in science and mathematics with a broad, quantitative background that will give them superior preparation for further work in graduate or professional schools or for permanent employment. The curriculum is composed of 23 quarter-courses as well as a regular seminar series. Most students take advantage of the opportunity to pursue research. ISP may lead to a three-year bachelor of arts degree if, by the end of the third year, the student has completed 36 or more quarter-courses and satisfied all other college requirements.

Admission is by special application to the director of ISP. For more information on admission procedures, see the description of ISP under Academic Options in the Undergraduate Education section of this catalog. Also see the Admissions section for achievement tests required.

The ISP curriculum consists of specially designed courses taught by faculty members of science and mathematics departments. Course descriptions are found with the appropriate departments in this catalog. Though listed in a three-year format, the program is often spread over four years, particularly if a student wishes to combine an ISP major with a second major in a traditional department. Specific second major requirements for ISP students can be found under individual departments in this catalog. For more information, see the ISP Web page at www.isp .northwestern.edu.

#### **Major in Integrated Science**

 First year ISP 101-1,2,3 Computing Applications CHEM 171 Accelerated General Inorganic Chemistry CHEM 172 Accelerated General Physical Chemistry MATH 291-1,2,3 Accelerated Mathematics for ISP: First Year PHYSICS 125-1,2,3 General Physics for ISP Second year BIOL SCI 212-1 ISP Biochemistry BIOL SCI 212-2 ISP Cell Biology and Genetics CHEM 212-1 Organic Chemistry CHEM 348 Physical Chemistry for ISP GEOL SCI 315 Physics of the Earth for ISP MATH 391-1 and -3 Accelerated Mathematics for ISP: Second Year PHYSICS 339-1,2 Quantum Mechanics • Third year **ASTRON 331 Astrophysics** BIOL SCI 310 ISP Quantitative Biochemistry and Molecular Biology BIOL SCI 311 ISP Neurobiology MATH 391-2 Accelerated Mathematics for ISP: Second Year PHYSICS 339-3 Nuclear Physics ISP 398 may substitute for up to 3 of the following courses: ASTRON 331; BIOL SCI 310 or 311; MATH 391-2 or -3; PHYSICS 339-3.

#### Courses

**INTG SCI 101-1,2,3 Computing Applications** Introduction to formulation and solution of scientific problems on the computer. One-third credit each quarter.

**INTG SCI 398-0 Undergraduate Research** Advanced work for superior students through reading, research, and independent study. Consent of ISP director required.

# International Studies Program

International studies, an undergraduate interschool adjunct major that is taken in conjunction with a traditional major, is open to Weinberg College students. (See International Studies Program in the Other Undergraduate Programs section of this catalog.)

#### Italian

See French and Italian.

#### Jewish Studies Program

The Jewish Studies Program focuses on Judaism, not only in its narrow sense as a religious phenomenon but also in its broader sense as a phenomenon of culture and civilization. A good case can be made that the roots of Western culture lie in two places: Athens and Jerusalem. The traditional education of the humanist scholar recognized this by requiring not only the mastery of Greek and Latin but also of Hebrew. Thus the study of Judaism in this program considers the many and varied dimensions of the phenomenon of Jewish civilization. A typical program of study includes, in addition to the religious dimension, the historical, sociological, linguistic, philosophic, and artistic dimensions.

### **Minor in Jewish Studies**

The minor in Jewish studies requires the successful completion of 7 courses in three general areas:

- A 3-course survey of Jewish history providing a basis for advanced work and a unified view of the history of the Jews in the Western world: RELIGION 210 Introduction to the Hebrew Bible 1 course on the history or culture of the Jewish people in the Middle Ages (consent of director required)
  1 course on the history or culture of the Jewish people in the modern period (consent of director required)
  2 courses in Jewish literature chosen from
- AAL 203-1,2 Advanced Hebrew English courses studying Jewish themes in American literature
- SLAVIC 372 Introduction to Eastern European Jewish Culture

Other courses, subject to approval by the Committee on Jewish Studies, may satisfy this requirement.

- 2 courses in Jewish thought chosen from
- RELIGION 224 Introduction to Judaism RELIGION 227 Introduction to Medieval Jewish Philosophy
- RELIGION 306 Judaism in the Modern World
- RELIGION 331 Jewish Thought in the 20th Century
- RELIGION 334 Classic Jewish Thought
- **RELIGION 335** The Art of Biblical Narrative
- RELIGION 352 Topics in Judaism

For students who also satisfactorily complete two years of language study in Hebrew, requirements for the minor are the successful completion of 5 courses, 3 in the first area and 1 each in the second and third areas.

Students applying for the minor in Jewish studies must present records showing a minimum of 5 courses not double-counted in their major.

#### Course

JWSH ST 350-0 Representing the Holocaust in Literature and Film Analysis of artistic, ethical, and historical questions about representing the Holocaust in different genres.

# Latin

See Classics.

# Latin American and Caribbean Studies Program

The Program in Latin American and Caribbean Studies allows students to pursue a coherent interdisciplinary course of study on this region of the world, including courses offering a variety of perspectives: social, historical, linguistic, political, and cultural. The program requires a set of core courses and also offers a series of elective courses in several different departments. Students are encouraged to spend a summer, quarter, or academic year in a Latin American or Caribbean country through the programs offered by the Study Abroad Office. Students may also take advantage of the opportunity to get to know the Latin American and Caribbean communities of Chicago through the interdivisional course GEN LA 393 Chicago Field Studies Internship.

#### Minor in Latin American and Caribbean Studies

Eight courses are required for the minor in Latin American and Caribbean studies, including two core courses, three courses to fulfill requirements, and three elective courses. All students in the program are required to have an effective reading knowledge of Spanish or Portuguese. The program expects the level of proficiency required by the Department of Hispanic Studies for entry into its 300-level courses or successful completion of a 200-level course or equivalent. To qualify for the minor, students must present a minimum of five courses not double-counted in their majors. Students who would like more information about the minor should contact the program director.

**Core courses:** These are courses offered in a variety of disciplines and are approved for core credit in Latin American and Caribbean studies. Every student must take at least two core seminars. Students are advised to begin their studies with one such course as a general introduction and end their studies by taking another as a capstone course when possible. Capstone courses may be any of the following courses:

- Any 300- or 400-level LATIN AM course
- SPANISH 390 or 395 when the topic is Latin America or the Caribbean
- ANTHRO 390 or 490 when the topic is Latin America or the Caribbean

**Courses to fulfill requirements:** Students must take a minimum of one course each on the history, literature, and politics of Latin America and the Caribbean, as follows:

- HISTORY 365 or 366
- SPANISH 260 and/or 261
- POLI SCI 353

Elective courses: Students may take any of the following courses as electives, in addition to other courses on Latin America, the Caribbean, and/or U.S. Latinos with the approval of the program director. Please note that many departments, especially Hispanic studies, anthropology, history, and political science, regularly offer courses on Latin America, the Caribbean, and/or U.S. Latinos under the "topics" rubric (e.g., Topics in Anthropology).

#### Courses

# LATIN AM 391-0 Human Rights and Migration in the

**Americas** Introduction to the fundamental tenets of international human rights law, their counterparts in U.S. asylum law and immigration policy, and evolving strategies for addressing human rights violations.

LATIN AM 396-0 Gender in Latin America Examination of the intersections of feminism, class, and social activism in Central and South America as well as in the context of Latina/o experiences in the United States; role of competing notions and expressions of masculinity, femininity, and sexuality in the construction of public discourses and social movements.

#### **Related Courses in Other Departments**

- AF AM ST 245 Black Communities in Diaspora
- AF AM ST 345 Politics of Afro-Latin America
- ANTHRO 328 The Maya
- ANTHRO 330 Peoples of the World (when content relates to Latin America, the Caribbean, and/or U.S. Latinos)
- ANTHRO 364 Pidgins and Creoles
- ANTHRO 390 Topics in Anthropology (as they relate to Latin America, the Caribbean, and/or U.S. Latinos)
- ART HIST 235 Introduction to Latin American Art
- HISTORY 291 Core Seminar in Latin American-Caribbean Studies
- HISTORY 365 The Formation of Latin American Society
- HISTORY 366 Latin America in the Independence Era
- HISTORY 367 Politics and Development in Latin America
- HISTORY 368-1,2 Revolution in 20th-Century Latin America
- HISTORY 392 Topics in History (as they relate to Latin America or the Caribbean)
- POLI SCI 343 United States and Latin America
- POLI SCI 353 Politics in Latin America
- POLI SCI 390 Central American Political Economy
- PORT 303 Advanced Portuguese
- SPANISH 260 Latin American Literature and Culture before 1888
- SPANISH 261 Latin American Literature and Culture since 1888
- SPANISH 304 Topics in Language (as they relate to Latin America)
- SPANISH 340 Latin American Culture and Civilization before 1888
- SPANISH 341 The Modernist Movement in Latin America
- SPANISH 342 Latin American Drama
- SPANISH 343 The Avant-Garde and Regionalism in Latin American Literature
- SPANISH 344 Contemporary Latin American Literature
- SPANISH 351 Latin American Literature and Civilization
- SPANISH 390 Undergraduate Seminar (if focusing on Latin America)

# Linguistics

Linguistics is the scientific study of language. The central topics of linguistics are the sound structure of language (phonetics, phonology), the structure of words and sentences (morphology, syntax), and their meaning (semantics, pragmatics). In addition, linguistics is concerned with language change and the social and psychological factors that affect language use. Knowledge of the origins, nature, and functions of language is one of the best tools available for increasing understanding of human nature and behavior.

The major in linguistics prepares students for professional studies in law, medicine, and business, as well as for graduate work in linguistics and related disciplines. The chances of securing attractive employment are greatly enhanced by interdisciplinary studies in language-related fields, education, social sciences, international studies, mathematics, or computer science.

# **Major in Linguistics**

# Departmental courses

Introductory courses (3 units): 205, 206, 207 Core courses (9 units): 3 courses chosen from 305, 306, 316, 329, 371, 372, plus 6 additional 300-level linguistics courses (only 1 of these may be 398 or 399; certain exceptions or substitutions, such as COG SCI 210, may be granted with the consent of the undergraduate adviser) **Related courses (4 units):** 4 courses selected from other departments in consultation with the linguistics undergraduate adviser

#### Minor in Linguistics

The minor in linguistics broadens the academic background of students majoring in related fields, including anthropology, cognitive science, communication sciences and disorders, computer science, philosophy, psychology, a language, or a language and culture area, by offering training in the theory and methods of linguistic analysis.

#### Minor course requirements (8 units)

- 205, 206, 207
- 2 courses chosen from 305, 306, 316, 329, 371, 372
- 3 additional 300-level linguistics courses

#### **Honors in Linguistics**

At the invitation of the department, an outstanding senior majoring in linguistics may be eligible for departmental honors by successfully completing a self-designed, facultysupervised research project on a topic of his or her choice. The research project culminates in a senior thesis that, in conjunction with the student's record in linguistics and related courses, forms the basis for the awarding of honors. For more information about guidelines and requirements for earning honors, consult the department.

#### Four-Year BA/MA Program

Students with a strong record in their major courses and an interest in pursuing linguistics at the graduate level are eligible to apply for the four-year BA/MA program in linguistics. Applications should be made no later than spring quarter of the junior year. To be considered for this program, students must demonstrate that they will be able to complete by the end of their senior year all Weinberg College requirements for the BA degree plus the department's requirements for the MA degree. See Four-Year Master's Programs in the Undergraduate Education section of this catalog.

#### **Courses Primarily for Undergraduates**

Courses 110, 204, 205, 206, 207, and 209 have an experimental requirement. Students may fulfill this requirement by either participating in two experiments of one hour each or by attending two lectures of one hour each. The experiments will be part of ongoing research in the department and will illustrate features of language structure and use that are relevant to topics covered in the core linguistics curriculum. The lectures will be part of the regular speaker series organized by the Language and Cognition Program.

**LING 110-0 Languages and Linguistics** The nature and structure of language. Methods of linguistic analysis. Language change, acquisition, and varieties.

**LING 204-0 Language and Prejudice** How language represents and reproduces the stereotypic thinking of prejudice; analysis of derogatory labels, discourse of exclusion, discriminatory language polices and practices.

**LING 205-0 Meaning** Introduction to linguistic meaning. Basic concepts in word and sentence meaning, prototype theory, metaphor, presupposition, and philosophical and psychological issues.

**LING 206-0 Formal Analysis of Words and Sentences** Formal analysis, rules, and notation for morphology (word structure) and syntax (sentence structure) in human languages.

**LING 207-0 Sound Patterns in Human Language** Introduction to the formal and instrumental analysis of the sound structure of language.

**LING 209-0 Language and Society** Introduction to social structure and language use. Standard and nonstandard language; regional, social, and ethnic dialects; language functions, norms, and attitudes.

**COG SCI 210-0 Language and the Brain** See Cognitive Science.

**ENGLISH 302-0 History of the English Language** See English.

**LING 305-0 Lexical Semantics** Introduction to lexical semantics; issues in the linguistic study of word meanings, including internal organization and interrelationships within the lexicon. Prerequisite: 205 or consent of instructor.

**LING 306-0 Fundamentals of Syntax** Principles of syntactic theory through analysis of various syntactic phenomena, based mainly on English data. Linguistic argumentation. Prerequisite: 206 or consent of instructor.

**LING 309-0 Psycholinguistics** Interrelationships of linguistic and psychological variables in human language use. Developmental and experimental psycholinguistics, the relationship between language and cognition. Prerequisite: 205, 206, 207, or consent of instructor.

**LING 310-0 Sociolinguistics** Social factors in linguistic variation. Linguistic diversity; multidialectal and multi-lingual societies; diglossia.

**LING 311-0 Child Language** How children acquire the forms and functions of their native language. Child bilingualism, the acquisition of literacy. Prerequisite: 205, 206, 207, or consent of instructor.

**LING 312-0 Linguistics and English Composition** Recent trends in the study of the uses and forms of writing and the processes of written composition. The learning and teaching of written language.

**LING 316-0 Fundamentals of Laboratory Phonology: Speech Production and Phonotactics** Articulatory phonetics. Syllable structure and phonotactics. Fundamentals of experimental design and data analysis. Prerequisite: 207 or consent of instructor.

**LING 318-0 Language and Gender** Use of language by and about women and men, cross-cultural gender differences in language and language attitudes.

**LING 319-0 Language Typology** Comparative overview of the classification and analysis of major grammatical structures found across languages of the world. Prerequisite: 206 or consent of instructor.

**LING 324-0 Language and Law** Survey of contemporary social science research on the interaction of language variables and our legal system; application of linguistics to the resolution of legal cases. Prerequisite: one 100- or 200-level course or consent of instructor.

**LING 325-0 Language and Medicine** Analysis of language patterns used in medical settings, including doctor-patient interaction and technical language use. Prerequisite: one 100- or 200-level course or senior standing.

**LING 329-0 Pragmatics** Nonliteral meaning, role of context in utterance production and interpretation. Implicature, presupposition, speech acts. Prerequisite: 205 or consent of instructor.

**LING 330-0 Topics in Language and Behavior** Topics in the relationship between language and human behavior. Topics vary. May be repeated for credit with different topic.

**LING 344-0 Research Methods in Linguistics** Linguistic data collection, management, and analysis. Use of computational, experimental, and statistical methods.

LING 346-0 Introduction to Computational Linguistics

Introduction to computational linguistics, designed to familiarize students with the methods and goals of language processing technologies at both applied and theoretical levels.

**LING 362-0 Second Language Acquisition** Major theories of second language acquisition and current issues in the field. Cognitive, personality, and sociocultural variables affecting a second language learning.

**LING 371-0 Morphology** Examination of the internal structure of words. Introduction to central problems facing a theory of morphology. The evolution of theories of morphology within generative grammar. Prerequisite: 206 or consent of instructor.

**LING 372-0 Formal Semantics** An introduction to natural language semantics and the use of formal tools to investigate and explain aspects of meaning in human languages above the word level. Prerequisite: 205, 206, or consent of instructor.

# LING 380-0 Spoken English for Nonnative Speakers

Conversational English addressing all oral language skills; primarily for international graduate students who are nonnative speakers of English. Content varies.

**LING 381-0 Written English for Nonnative Speakers** Written argumentation skills and all aspects of academic writing; primarily for international graduate students who are nonnative speakers of English.

LING 398-0 Undergraduate Seminar in Linguistics

By invitation of the department. For students of superior ability, with choice of topic left to the group.

LING 399-0 Independent Study

# Mathematical Methods in the Social Sciences Program

A central feature of modern social, behavioral, managerial, and policy sciences is the use of mathematics, statistics, and computers, both as languages and as methods of abstraction and analysis. However, most undergraduate programs in the social sciences do not incorporate mathematical approaches in an organized and consistent manner. Consequently, undergraduate students in traditional programs do not receive systematic preparation in mathematics. The Mathematical Methods in the Social Sciences (MMSS) Program was created to give students an opportunity to acquire these skills and to become acquainted with modern analysis of social systems.

# Major in Mathematical Methods in the Social Sciences

MMSS enables students to combine the study of social sciences with training in formal analytical methods. The program is for students with high mathematical aptitude and strong interest in social problems and issues, including their policy and research implications. It provides excellent preparation for graduate study in social or managerial sciences as well as for careers that require both quantitative skills and a solid background in the social sciences.

MMSS students pursue a double course of study: a common mathematics/quantitative methods sequence and the social science major of their choice. (In some cases, students have chosen their joint major from outside the social sciences.) In the first two years of the program, students enroll in a coordinated sequence of 12 one-quarter courses (two courses per quarter) covering mathematical methods and their applications in the social sciences. These courses are open only to MMSS students and are taught at an advanced level that is appropriate for this select group of students. In their senior year all MMSS students participate in a senior seminar in which they write a thesis. There are no other required MMSS courses, but students must also fulfill the requirements of their joint major.

# **Required courses**

- First year: MMSS 211-1,2,3; MATH 292-1,2,3
- Second year: MATH 308; MMSS 311-1,2; MATH 392-1,2,3
- Senior year: at least 2 quarters of MMSS 398-1,2,3 while writing the thesis

Admission to the MMSS program is very selective; it is limited to entering freshmen and to Northwestern sophomores with superior academic records and a demonstrated strong aptitude in mathematics.

Prerequisite for admission consideration is a full-year course in calculus. High school students fulfilling this prerequisite are encouraged to enter the program as freshmen. Students lacking calculus but planning to enter the program as sophomores should complete at least two quarters of calculus (MATH 214-1,2) in their freshman year.

Applicants who wish to enter the program as freshmen must apply both to Northwestern and to the MMSS program. Students who plan to apply as sophomores are advised to register for a 200-level calculus/linear algebra sequence such as MATH 290-1,2,3 or ES APPM 252-1,2,3 in their freshman year. Students with less preparation in mathematics will be considered for admission but may be required to take all or part of the first-year MMSS math sequence.

Applicants or current students who wish to be considered for the program may request an application from the MMSS director, Walter Annenberg Hall, Room G26, Evanston, Illinois 60208-2250.

# Honors in Mathematical Methods in the Social Sciences

MMSS students who write an outstanding senior thesis may be nominated by the faculty to graduate with program honors. A Weinberg College committee awards honors after reviewing recommendations. Typically, more than half of all MMSS students graduate with program honors.

#### Minor in Mathematics

MMSS students wishing to develop a more sophisticated understanding of mathematics and formal analysis of models are encouraged to take MATH 310-1,2,3. MMSS students successfully completing this sequence and the other required MMSS courses (including MATH 292-1,2,3, MATH 392-1,2,3, and MATH 308) will receive a minor in mathematics.

#### Courses

MMSS 211-1,2,3 Quantitative Social Science for MMSS:

**First Year 1.** Introduction to formal models in the social sciences. **2.** Individual decision making and microeconomics. **3.** Collective decision making and political economy.

MATH 292-1,2,3 Accelerated Mathematics for MMSS: First Year See Mathematics.

**MATH 308-0 Foundations of Higher Mathematics** See Mathematics.

MATH **392-1,2,3** Statistical Methods for MMSS: Second **Year** See Mathematics.

MMSS 311-1,2, Quantitative Social Science for MMSS: Second Year 1. Game Theory. 2. Formal models of political decision making.

**MMSS 394-0 Special Topics** Advanced work for investigating topics of current interest. Offered in different quarters; may be repeated for credit with different topic. Prerequisite: third-year standing in MMSS or consent of instructor.

#### MMSS 398-1,2,3 Senior Thesis Seminar

# Mathematics

Mathematics plays a central role in modern society. It has long been an important tool in science and engineering, and it is now increasingly being used in varied and sophisticated ways in the social sciences, the humanities, and business. With expanding applications, many areas of mathematics, from pure to applied, have grown tremendously. At Northwestern, a variety of courses for nonmajors address these diverse applications of mathematics.

The department offers major programs in mathematics and applied mathematics as well as the more demanding MENU program. Applied mathematics will appeal to students who are primarily interested in applications of mathematics in the physical, biological, social, or behavioral sciences, management, or engineering. Talented undergraduates may take some graduate courses to enrich their studies, preparing them for employment or further study in graduate school.

A mathematics course that is a prerequisite for another mathematics course may not be taken for credit after the more advanced course has been completed. Consent of the department may be substituted for the prerequisite for any mathematics course. No 100-level course may be taken for credit after a 200- or higher level mathematics course has been completed. See the course descriptions for other restrictions.
## **Majors in Mathematics**

Mathematics majors are urged to take 308 early in their academic careers. Also recommended are 221 and a course in computer science. Mathematics majors preparing for graduate school should take 310 and 337 as early as possible; they should also take 328.

Students pursuing the applied mathematics major are urged to take computer programming courses.

Mathematics and applied mathematics majors interested in probability and statistics should take 330 and some further courses in statistics (STAT 350, 351, 352, or 355). They should complete the requirements by taking additional courses from among real analysis (310), computer science, and areas where probability and statistics are used.

Majors interested in economics should take MATH 310 and 330 and ECON 380 or 381.

All majors are encouraged to discuss their programs with the department director of undergraduate studies.

## Mathematics

## Departmental courses

Basic courses: 214-1,2,3, 215, 217, or equivalent

**Required major courses:** Students must take a total of 9 300-level courses in mathematics, including either 334 or 337-1, and at least 3 courses must form one of the complete sequences 310-1,2,3, 330-1,2,3, or 337-1,2,3. Students may not count both 334 and 337-1 for the major without consent of the department. (Students may count both courses toward the 45 courses required for graduation.)

With the approval of the department, students may substitute as many as 3 of the remaining 6 courses with a coherent set of the same number of 300-level courses offered by other departments. Those courses must be deemed to focus on serious applications of mathematics.

## **Applied Mathematics**

## Departmental courses

Basic courses: 214-1,2,3, 215, 217, 221, or equivalent

#### Required major courses

- 334
- 2 groups chosen from the following (substitution of substantially equivalent courses may be allowed): 301-1,2
  303 or 316; 305; 313-1
- 310-1,2
- 330-1,2,3 or 330-1; IEMS 303, 304
- Additional 300-level courses for a total of 10; 3 or 4 must be in an area making substantial use of mathematics. Some suitable areas are computer science, economics, applied mathematics, geology, industrial engineering, physics, and statistics, but coherent sets of courses in other areas also may qualify. Approval of the program by the department's director of undergraduate studies is required.

# **Minor in Mathematics**

Students choosing to minor in mathematics complete prerequisite courses selected from the following or their equivalent (as certified by the department):

- 214-1,2,3, 215, and 217
- 290-1,2,3
- 291-1,2,3
- 292-1,2,3

## Minor course requirements (6 units)

• 6 300-level courses offered by the department, including at least 1 2-quarter sequence: 310-1,2, 330-1,2, or 337-1,2

To fulfill the sequence requirement, students may, with the prior approval of the department,

- substitute 310-2,3, 330-2,3, or 337-2,3 where appropriate
- substitute other 2-quarter sequences regularly offered in the department that provide a focused, in-depth introduction to a subfield of mathematics

As many as 2 of the 6 required courses may be courses with a substantial mathematical component that are offered by departments other than mathematics. No such course, however, may be simultaneously counted toward the student's major requirements or, if the course is offered in a school other than Weinberg College, toward the student's school requirements.

# **MENU Program**

Mathematical Experience for Northwestern Undergraduates (MENU) is designed for students with strong mathematical skills who wish to enhance and extend their knowledge of mathematics while retaining flexibility in their choice of major. MENU faculty teach the special MENU courses as well as a wide range of courses in all areas of modern mathematics. MENU classes range from small (4–6) to mid-size (20–25) and are taught by some of the department's finest teacher/scholars. The director of MENU is available as an adviser for MENU students during their time at Northwestern, regardless of their major.

# Curriculum

Two specially designed yearlong courses — 290 and 340 — form the foundation of MENU and further work in mathematics as well as in economics, political science, statistics, physics, and many other areas that rely on the tools and techniques of modern mathematics.

Admission to 290 is limited to students who have demonstrated a solid grasp of the calculus of functions of one variable (including both differentiation and integration), typically by means of a score of 4 or 5 on the College Board Advanced Placement Calculus BC examination, a 5 on the Calculus AB examination, or strong performance on a comparable examination. Students who took a year of calculus in high school but did not take an Advanced Placement examination should speak directly with the director of MENU to determine their readiness for admission to 290.

## **Mathematics Second Major for ISP Students**

The Integrated Science Program (ISP) is a highly selective BA program in Weinberg College (see Integrated Science Program). Students majoring in ISP who wish to complete a second major in mathematics should fulfill the following requirements instead of those listed above. They must take a full-year sequence, MATH 310-1,2,3 or 337-1,2,3. It is recommended (but not required) that students planning graduate work in mathematics take both of these sequences. Students pursuing an ISP/mathematics double major may not substitute ISP 398 for any mathematics course in the ISP curriculum.

# **Honors in Mathematics**

Majors with outstanding records may be nominated for graduation with departmental honors. Those graduating under the regular mathematics option should complete 310 and 337 (or the equivalent). Those graduating under the applied mathematics option should complete 310 (or the equivalent). In exceptional cases, students who have not completed these courses may also be considered for honors.

In addition, to be nominated for departmental honors a student must complete with distinction two quarters of independent study or two quarters of a graduate course; in either case the student must complete an acceptable project that culminates in an honors thesis. Finally, the student must have a grade point average of 3.5 or above in courses that satisfy major requirements. (Courses such at those in the calculus sequence that are prerequisites for the major are not counted.)

For more information on honors consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

## The Teaching of Mathematics

Weinberg College students pursuing a major in mathematics who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

## **Placement in Calculus**

Students who have taken three years of high school mathematics, including some trigonometry, should in most cases be adequately prepared for the first quarter of calculus (214-1).

Students who have taken calculus in high school are encouraged to begin their study of calculus at Northwestern in the most advanced course appropriate to their background. Students who have completed a year's course in calculus with good grades should ordinarily register for 214-3. To help determine the appropriate placement before registration, students should take the Self-Placement Examination available at the department office. Students who skip 214-1 and/or 214-2 may earn credit for the course(s) skipped by passing a credit examination, which is given in October and must be taken during the first year of enrollment at Northwestern. Credit earned by this examination may not duplicate AP credit or transfer credit earned at other colleges or universities. For students in Weinberg College, this credit counts toward the distribution requirement. Engineering students should consult with their advisers about the necessity for this examination.

## **General Course Recommendations**

Students interested in mathematics, natural sciences, premed, engineering, or economics should take the standard calculus sequence 214-1,2,3.

Students who intend to major in behavioral science ordinarily should take 210-1,2 but may take 214-1,2,3.

Students who desire an introduction to mathematics to fulfill the distribution requirement but who do not intend to do more advanced work in mathematics should consider a 100-level course or 210.

Students who have mastered the elements of single variable calculus in high school and desire an early introduction to theoretical mathematics should consider 290-1,2,3. Registration in 290 is only by invitation or consent of the department. Students should take the CEEB Advanced Placement Examination (preferably the BC exam), on the basis of which invitations to enroll in 290 are given. Students who wish to take 290 but have not received an invitation must obtain consent from the department.

Material in the basic calculus sequence 214-1,2,3, 215, 217, and 221 is covered in other sequences, particularly 291-1,2,3. Other sequences such as 290-1,2,3, 292-1,2,3, and ES APPM 252-1,2,3 cover substantial parts of this material as well as other topics. Students who are uncertain about the exact equivalences should consult with the department's director of undergraduate studies. Students who wish to pursue combinations from different sequences should plan a coherent program with the director of undergraduate studies. They will not be permitted to take courses in these sequences that lead to excessive duplication of subject matter.

# **Courses Primarily for Undergraduates**

**MATH 104-0 Games and Fallacies** Number puzzles and games; conceptualizing numbers; common fallacies. For non-science students who may never have seen the charm of pure mathematical play or the spirit of mathematical applications.

**MATH 110-0 Survey of Modern Mathematics I** Set theory, probability and statistics, matrices, number theory. Pre-requisite: high school mathematics.

**MATH 111-0 Survey of Modern Mathematics II** Continuation of 110. Prerequisite: high school mathematics.

## MATH 210-1,2 Mathematics for the Behavioral Sciences

1. Elementary linear algebra and applications. Finite probability. Elementary statistics. 2. Differential calculus. Integral calculus. Examples drawn from the behavioral and social sciences. Students may not receive credit for both 210-2 and 214-1. Prerequisite: three years of high school mathematics.

## MATH 213-0 Review of Calculus of One Variable

Elements of differential and integral calculus with an emphasis on problem solving, for entering students who have had calculus in high school. As a prerequisite for other courses, 213 is equivalent to 214-2. Students may not receive credit for 213 and any of the following: 210-2, 214-1,2. Prerequisite: one year of high school calculus.

**MATH 214-1,2,3 Calculus 1,2.** Elements of differential and integral calculus. **3.** Vector algebra, vector functions, partial derivatives. Students may not receive credit for both 214-1 and 210-2 or for 214-3 and any of the following: 290-1, 291-1, or 292-1. Prerequisite: three years of high school mathematics.

**MATH 214-4 Calculus** Integral calculus, vector algebra, vector functions, partial derivations, optimization. Covers the material of 214-2 and 214-3 specific to the social sciences; not recommended for students majoring in natural sciences. Acceptable as preparation for 217, 221, and 300-level mathematics courses (except 305 and 330). Students may not receive credit for both 214-3 and 214-4 or any equivalent course. Prerequisite: 214-1 or equivalent or consent of department.

**MATH 215-0 Multiple Integration and Vector Calculus** Double and triple integrals. Line and surface integrals. Cylindrical and spherical coordinate systems. Change of variable in multiple integrals; Jacobians, gradient, divergence, and curl. Theorems of Green, Gauss, and Stokes. Prerequisite: 214-3.

## MATH 217-0 Sequences and Series, Linear Algebra

Sequences and series: convergence tests; power series; Taylor series. Linear algebra: vectors and matrices; Gaussian elimination; inverses; determinants; eigenvalues and eigenvectors; quadratic forms and diagonalization; application to quadric surfaces. Prerequisite: 214-3.

**MATH 219-0 Linear Algebra with Economics Applications** Basic concepts of linear algebra with applications to economics. Solving linear equations, determinants, eigenvalues and eigenvectors, discrete iterative linear systems, and least squares fitting of a line. Cannot be counted toward a major in mathematics; not recommended for student majoring in the natural sciences. Prerequisite: 214-3 or -4. Students may not receive credit for both 217 and 219.

**MATH 221-0 Elementary Differential Equations** Applications of calculus and linear algebra to the solution of ordinary differential equations. Prerequisite: 217, concurrent registration in 217, or consent of department.

# MATH 290-1,2,3 Accelerated Mathematics: First Year

**1,2.** Deeper treatment of calculus, including a rigorous treatment of its basic concepts. **3.** Linear algebra. Prerequisites: one year of calculus (usually in high school) and consent of department.

MATH 291-1,2,3 Accelerated Mathematics for ISP: First Year 1. Vector differential calculus and multidimensional calculus. 2. Vector integral calculus, differential equations, infinite series. 3. Linear algebra, differential equations. Open only to students in ISP.

# MATH 292-1,2,3 Accelerated Mathematics for MMSS:

First Year 1. Linear algebra. 2. Multidimensional calculus.3. Calculus topics. Prerequisite: first-year standing in MMSS.

**MATH 301-0 Mathematical Models in Finance** Analytic modeling of problems from finance; basics of partial differential equations, the diffusion equation, the Black-Scholes Equation, finite difference methods, finite sampling, Brownian motion, and Ito's formula. Prerequisite: 221 or equivalent.

**MATH 303-0 Differential Equations** Intermediate course. Topics chosen from linear systems, nonsingular boundary value problems, theory of periodic solutions, stability theory, asymptotic expansions, special functions of mathematical physics, perturbation theory. Prerequisite: 221 or graduate standing.

**MATH 304-0 Game Theory** Selected topics in game theory: noncooperative games, matrix games, optimal strategies, cooperative games. For students in mathematics, probability, business, social sciences. Prerequisite: 217 or consent of instructor.

**MATH 305-0 Complex Variables for Applications** Complex numbers, functions of a complex variable, theory of analytic functions, series development, analytic continuation, contour integration, conformal mapping. Students may not receive credit for both 305 and ES APPM 311-3 except by consent of the department. Prerequisite: 221.

**MATH 308-0 Foundations of Higher Mathematics** Introduction to fundamental mathematical ideas — such as sets, functions, equivalence relations, and cardinal numbers and basic techniques of writing proofs. Prerequisite: 217 or equivalent or consent of department. May be taken for credit after 310-1 or 337-1 only with the consent of the department.

**MATH 310-1,2,3 Introduction to Real Analysis** Sets, functions, limits, properties of the real number system. Metric spaces. Foundations of differential and integral calculus, including Riemann integral and infinite series. Lebesgue integration. Fourier series. Prerequisite: 215, 217, 308, or consent of department.

MATH 313-1,2 Chaotic Dynamical Systems 1. Chaotic phenomena in deterministic discrete dynamical systems, primarily through iteration of functions of one variable.Iteration of functions of two and more variables, including

the study of the horseshoe map, attractors, and the Henon map. Complex analytic dynamics, including the study of the Julia set and Mandelbrot set. Prerequisite: 217.

**MATH 316-0 Fourier Series and Boundary Value Problems** Expansion in orthogonal functions with emphasis on Fourier series. Applications to solution of partial differential equations arising in physics and engineering. Students may not receive credit for both 316 and 391-1 or ES APPM 311-2. Prerequisite: 221 or consent of department.

MATH 317-1,2 Experimental Mathematics 1. C++

coding for basic mathematical concepts. Mathematical visualizations, graphic code; digital calculus. Simpson's rule, antidifferentiation. Vector fields, systems of ordinary differential equations, Runge Kutta. Simulation of nonlinear dynamical systems. **2.** C++ for scientific computing and graphics. Numerical integration, perturbation theory. Direct numerical procedures, calculus of variations. Visualization of contraction mappings, thermodynamic systems, vaporization.

**MATH 320-0 Concrete Mathematics** Discrete mathematics emphasizing interplay between discrete and continuous mathematics. Recurrent problems, sums, floors and ceilings, divisibility and primes, binomial coefficients and generating functions. Prerequisite: 214-1,2 or consent of department.

MATH 326-0 Geometry Axiomatics for Euclidean geometry. Non-Euclidean geometry. Projective geometry. Introduction of coordinate system from the axioms. Quadrics. Erlangen program. Introduction to plane algebraic curves. Prerequisite: 214-3.

**MATH 328-0 Introduction to Topology** Point-set topology. Prerequisites: 308, 310-1 (may be corequisite).

**MATH 329-0 Introduction to Differential Geometry** Curves and surfaces in three-dimensional space. Prerequisites: 215, 217.

MATH 330-1,2,3 Probability and Statistics 1. Discrete probability spaces. Random variables. Expected value. Combinatorial problems. Special distributions. Independence. Conditional probability. Introduction to continuous case. 2. Integrating density functions. Convolutions. Law of large numbers. Central limit theorem. Random walk. Stochastic processes. 3. Elementary decision theory. Estimation. Testing hypotheses. Bayes procedures. Linear models. Nonparametric procedures. Students may not receive credit for both 330 and 392. Prerequisites: 215, 217.

**MATH 334-0 Linear Algebra for Applications** Linear functions, complex vector spaces, unitary and Hermitian matrices. Jordan canonical form. Selected applications from networks and incidence matrices, least squares approximation, systems of differential equations, fast Fourier transform, finite element method, linear programming. Prerequisite: 217 or equivalent.

## MATH 335-1,2 Introduction to the Theory of Numbers

**1.** Divisibility and primes, congruences, quadratic reciprocity, diophantine problems. **2.** Additional topics in analytic and algebraic number theory. Prerequisite: 214-3 or consent of department.

## MATH 337-1,2,3 Introduction to Modern Algebra

Abstract theory of vector spaces and linear transformations, including canonical forms. Prerequisite: 217, 308, or concurrent registration in 308 or equivalent. 2. Groups and their structure; elementary ring theory. Prerequisites: 217, 308 or equivalent, 337-1, or consent of department.
 Rings, modules, and fields with applications to the impossibility of certain ruler and compass constructions. Prerequisite: 337-2. Students may not take both 337-1 and 334 for credit without consent of department.

**MATH 338-1,2,3 MENU: Algebra 1.** Groups and their structure, including the Sylow theorems; elementary ring theory; polynomial rings. **2.** Basic field theory; Galois theory. **3.** Module theory, including application to canonical form theorems of linear algebra. Prerequisites: 340-1,2,3 or consent of department.

**MATH 340-1,2,3 MENU: Second Year 1.** Multidimensional differential and integral calculus. **2,3.** Introduction to real analysis. Prerequisites: 290-1,2,3 or consent of department.

**MATH 375-0 Mathematical Logic** Mathematical formulation and rigorous discussion of logical systems, particularly the propositional calculus and the functional calculi of first and second order. Well-formed formulae, formal languages, proofs, tautologies, effective procedures, deduction theorems, axiom schemata. Prerequisite: consent of instructor.

# MATH 376-0 Theory of Computability and Turing

**Machines** Algorithms, computability, decidability, enumerability; formal replacements and Church's thesis. Turing machines, primitive recursive functions, mu-recursive functions, recursive functions. Undecidability predicates; the undecidability and incompleteness of arithmetics. Prerequisite: consent of instructor.

MATH 391-1,2,3 Accelerated Mathematics for ISP: Second Year 1. Fourier series and boundary value problems. 2. Probability and statistics. 3. Complex analysis, elements of group theory. Students may not receive credit for both 316 and 391-1 or for both 305 and 391-3. Ordinarily taken only by students in ISP. Prerequisites: 291-1,2,3; PHYSICS 125-1,2,3.

MATH 392-1,2,3 Accelerated Mathematics for MMSS: Second Year 1. Probability theory and its social science applications. 2. Econometric methods. 3. Stochastic processes. Students may not receive credit for both 330 and 392. Prerequisite: second-year standing in MMSS.

**MATH 395-0 Undergraduate Seminar** (1–4 units) Topics of modern mathematics and relationships among different branches of mathematics. Open only to superior students by consent of department.

**MATH 399-0 Independent Study** Open on approval of department to undergraduates who are qualified to do independent study and have a definite plan of study. Students who wish to enroll in 399 must file a plan of study with the department before registration.

# Neurobiology and Physiology

The Department of Neurobiology and Physiology does not offer a major to incoming students. See Biological Sciences, Undergraduate Program in, for a description of the major in biological sciences.

# Philosophy

Perhaps the most notable feature of the Department of Philosophy is its pluralism — its commitment to exposing students to a broad range of philosophical traditions and philosophical issues. The department, with strengths in both Anglo-American and contemporary continental philosophy, provides courses in all systematic areas of philosophy as well as a strong array of courses in ancient, medieval, and modern philosophy. The research interests of members of the department show a similar breadth. This pluralism enables students to see philosophy's application to all areas of life and to appreciate the diversity of approaches possible in philosophy.

## **Major in Philosophy**

Because the study of philosophy involves the critical discussion of the most fundamental questions asked by human beings, it helps develop breadth of understanding and clarity of thought. This character of philosophical inquiry makes a double major attractive to many students. Moreover, with appropriate supporting courses, a philosophy major can be a sound preparation for many careers, whether or not they involve further study.

The core of the program is a firm grounding in the history of philosophy. Against this background, students can tailor a program that meets most fully their particular interests. Full descriptions of the courses offered each quarter are available in the department office two weeks before advance registration.

# Departmental courses (12 units)

Students should complete these required courses, especially 210-1 and -3, as early as possible, since material covered is a prerequisite to more advanced work.

- Logic: 150
- History of philosophy: 210-1, 210-3, 310, and either 210-2 or 261
- Of the remaining 7 courses, at least 4 must be at the 300 level; none may be at the 100 level. Students are strongly encouraged to take at least one quarter of 395, a seminar open only to majors in their junior or senior year.

## **Minor in Philosophy**

The minor in philosophy requires students to be wellgrounded in the history of philosophy, especially ancient and early modern, covering the major texts of ethical and political theory as well as the major texts of epistemology and metaphysics. The emphasis on argument and logical structure in philosophy requires students to be familiar with contemporary logic, at least up to the level of the first-order predicate calculus. Beyond this foundational requirement, students take four courses tailored to their individual interests and, typically, to complement work being done in their major. To provide the greatest latitude for this, only three of the four remaining courses need be at the 300 level.

# Minor course requirements (8 units)

- 4 foundation courses: 150, 210-1 and -3, 261
- 4 philosophy electives: no 100-level courses, at least 3 300-level courses

## **Honors in Philosophy**

To be admitted to honors, a student must have a grade point average of 3.3 or above in the philosophy major and declare candidacy during the spring quarter of the junior year. The student must take 395 at least once. Declaration of candidacy involves approval of the project by a faculty adviser. The candidate then takes 398 in three successive quarters and submits a paper demonstrating an appropriate level of research or reflection. The paper is then read by the adviser and another faculty member. Their comments are submitted to the Committee on Undergraduate Studies, which recommends approved nominations to the Weinberg College Committee on Superior Students and Honors. For more information, consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

## **Courses Primarily for Freshmen and Sophomores**

Beginning students of philosophy should take 110, 111, or 150 during their first year. Students with an informed interest in philosophy, especially those intending to choose philosophy as a major, should begin with 210-1 and -3 in their first year.

**PHIL 109-6 Introductory Seminar in Philosophy** Introduction to philosophy: special topics or a general survey. Offered in small discussion-oriented classes.

**PHIL 110-0 Introduction to Philosophy** Fundamental problems and methods of philosophy.

**PHIL 111-0 Introduction to Contemporary Philosophy** Major problems and types of contemporary philosophy. Representative writings of the 20th century.

**PHIL 115-0 Society and the Individual** Traditional and contemporary moral problems concerning the relation of the individual to society: the rule of law, punishment, abortion, euthanasia, personal liberty, war, revolution.

**PHIL 150-0 Elementary Logic I** Study of argument through the use of elementary formal systems of deductive inference. Informal fallacies and nondeductive modes of inference. First quarter of 150-250-350 sequence.

**PHIL 205-0 Introduction to Oriental Philosophy** Philosophic conceptions developed in the Orient. Comparison with Western thought.

**PHIL 209-0 Introduction to Existentialism** The principal sources of existential philosophy: Kierkegaard, Jaspers, Marcel, Nietzsche, Sartre, Heidegger, Merleau-Ponty, and others.

**PHIL 210-1,2,3 The History of Philosophy 1.** Ancient philosophy. **2.** Medieval philosophy. **3.** Early modern philosophy.

**PHIL 220-0 Science in Human Culture** Interaction between science and other aspects of human culture. Emphasis on critical thinking about controversial issues. Content varies, e.g., creationism and sociobiology; abortion. May be repeated for credit with different topic.

**PHIL 250-0 Elementary Logic II** Formal systems of deductive inference and their properties. Translation from ordinary language to formal languages, including first-order quantification and identity and related philosophical problems. Second quarter of 150-250-350 sequence. Pre-requisite: 150.

**PHIL 254-0 Scientific Method in the Natural Sciences** Philosophical and methodological issues in the natural sciences, such as the discovery and testing of hypotheses, explanation, theory selection, the nature of scientific laws, causality, space and time, determinism. Prerequisite: one course in the natural sciences.

**PHIL 255-0 Theory of Knowledge** Basic philosophical questions about human knowledge, focusing on skepticism; competing theories of knowledge.

**PHIL 260-0 Ethics** Representative theories of human conduct and character, dealing with such issues as the nature of the good, duty, happiness, virtue, freedom, and moral responsibility.

PHIL 261-0 Classics of Ethical and Political Theory

Classical works of moral and political philosophy from the ancient, medieval, and modern periods. Individual offerings may concentrate exclusively on moral or on political philosophy and may consider works from one period only.

**PHIL 263-0 Social and Political Philosophy** Issues such as the rationale for existing in society, the justification and proper limits of political power, and the most desirable form of government.

**PHIL 265-0 Introduction to the Philosophy of Law** Ethical and conceptual issues arising in connection with the law, such as the nature of law, the nature of liberty and of justice, and the theory of punishment.

**PHIL 266-0 Philosophy of Religion** A survey of the central issues in the philosophic analysis of religious experience:

the existence of God, creation, miracles, the claims of faith versus the claims of reason, sin, free will, and immortality.

## **Courses Primarily for Juniors and Seniors**

**PHIL 303-0 The Philosophy of Education** Educational theories of representative philosophers as related to their culture and the problems of their times.

**PHIL 307-0 Studies in French Philosophy** One or more figures in French philosophy. The figures may vary, but the primary readings will be in French.

**PHIL 310-0 Kant's** *Critique of Pure Reason* A close examination of Kant's *Critique of Pure Reason*.

**PHIL 320-0 Studies in Ancient Philosophy** The work of one important philosopher or philosophical movement before A.D. 500. Subject varies. May be repeated for credit with different topic. Prerequisites: 210-1,2,3.

**PHIL 321-0 Studies in Medieval Philosophy** The work of one important philosopher or philosophical school between A.D. 500 and 1000. May be repeated for credit with different topic. Prerequisites: 210-1,2,3.

**PHIL 322-0 Studies in Modern Philosophy** The work of one important philosopher or philosophical movement between 1500 and 1800. Subject varies. May be repeated for credit with different topic. Prerequisites: 210-1,2,3.

**PHIL 323-0 Studies in Contemporary Philosophy** The work of one important philosopher or philosophical movement of the 19th and/or 20th centuries. Subject varies. May be repeated for credit with different topic. Prerequisites: 210-1,2,3.

**PHIL 324-0 Phenomenology** Major works contributing to the phenomenological movement: texts by Husserl, Heidegger, Sartre, and Merleau-Ponty. Questions of methodology, together with problems in theory of knowledge and ontology.

**PHIL 325-0 Philosophy of Mind** Selected topics in the philosophy of mind: mind-body problem, problem of other minds, self-knowledge, personal identity, philosophical psychology. May be repeated for credit with different topic.

**PHIL 326-0 Philosophy of Medicine** Introduces premed students to ethical problems they are likely to encounter. For example, is it ever ethical to withhold information from a patient; should physicians help terminally ill patients commit suicide; and should health care for the elderly be more limited than for children?

**PHIL 327-0 Philosophy of Psychology** Problems such as the nature of psychological explanation, experimentation and the testing of psychological claims, the standing of psychology as a science, reductionism, the unconscious, and conceptualizing the psyche and its processes.

**PHIL 328-0 Classics of Analytic Philosophy** Examination of classic texts that shaped the analytic movement of 20th-century Anglo-American philosophy. Readings from Frege, Russell, Wittgenstein, Carnap, Quine, and others.

**PHIL 329-0 On Being a Scientist** Investigation of science as a profession, its standards of conduct, strategies for surviving in the profession, and special problems that arise. Prerequisite: a major in an area of science.

**PHIL 330-0 Practical Reasoning and Choice** Explanations for decisions, what it is to decide, possible constraints on decisions, how and why deliberation occurs, how to understand preference reversals and actions taken against one's better judgment.

**PHIL 350-0 Systematic Logic** Formal systems of deductive inference. Metatheory, formal semantics, completeness, and set theory. Third quarter of 150-250-350 sequence. Prerequisite: 250.

**PHIL 351-0 Advanced Topics in Philosophical Logic** Methods of modern formal logic applied to traditional philosophical questions, e.g., modal logic, deontic logic, epistemic logic, many-valued logic, tense logic. Prerequisite: 250.

**PHIL 353-0 Philosophy of Language** The nature and uses of language as presenting philosophical problems, e.g., theory of reference, the modes of meaning, definition, metaphor, problems of syntax, and semantics.

**PHIL 354-0 Advanced Topics in the Philosophy of Natural Science** Discovery, conceptual change and the growth of scientific knowledge, explanation, relation of theory to observation, confirmation theory, space and time, causality, and philosophical implications of relativistic and quantum mechanics. Prerequisite: 250 or consent of instructor.

**PHIL 355-0 Scientific Method in the Social Sciences** Analysis of the philosophical foundations of social inquiry with reference to selected problems, thinkers, and schools, both classical and modern.

**PHIL 360-0 Ethical Theory** A systematic analysis of the nature of moral value judgments and their validity.

**PHIL 361-0 Advanced Studies Ethics** Philosophical study of a central problem, school of thought, or historical period or figure (e.g., Aristotle) in moral philosophy. Topics vary. May be repeated for credit with different topic.

**PHIL 363-0 Philosophy of History** Representative theories of history: determinism, indeterminism, and teleological purpose; history as process and as knowledge.

**PHIL 364-0 Principles of Political Philosophy** Political power and authority; the notion of law; relations between society and the state; concepts of rights, liberty, equality, and justice. The problem of peace. Prerequisite: 263.

**PHIL 366-0 Advanced Studies in the Philosophy of Religion** Central problems in the philosophy of religion.

**PHIL 367-0 Philosophical Issues Concerning Technology** Normative issues raised by technology, such as whether technology has intrinsic values and whether it is possible to make technology serve humane ends. Prerequisite: consent of instructor. PHIL 368-0 Problems in Social and Political Philosophy

Philosophical analysis of the social and political thought of a school, an individual philosopher, or an epoch. Content varies.

**PHIL 380-0 Philosophy of Art** Nature and purpose of art, art and perception, the nature of creativity, and the social responsibility of the artist.

**PHIL 390-0 Special Topics in Philosophy** Topics vary from year to year; may be repeated for credit with different topic.

**PHIL 395-0 Junior-Senior Seminar** Open only to majors in their junior or senior year.

**PHIL 398-1,2,3 Senior Tutorial** Undergraduate honors thesis. Grade of K given in 398-1 and -2. Prerequisite: 395 or approval of the chair.

**PHIL 399-0 Independent Study** Open to properly qualified students with consent of department.

## **Physics and Astronomy**

The study of physics or astronomy provides an intellectual foundation appropriate to any field. The emphasis on quantitative thinking and mathematical analysis that characterizes physics and astronomy furnishes a good background for almost any career. While there is no formal major in astronomy, students may select the astronomy concentration within the physics major.

Students who major in physics and astronomy normally take PHYSICS 135-1,2,3 in their freshman year. Exceptionally qualified students may take PHYSICS 125-1,2,3 with consent of the department. Depending on their high school preparation, majors in physics and astronomy normally also study mathematics in their freshman and sophomore years, starting with MATH 214-1, -2, or -3 and continuing with MATH 215, 217, 221, and 316. (See the prerequisites for PHYSICS 135-1,2,3; students taking PHYSICS 125-1,2,3 must be enrolled in either MATH 290-1,2,3 or 291-1,2,3.)

Students in Weinberg College may complete their science distribution requirement by taking any of the following courses: PHYSICS 103, 130-1,2, 135-1,2; ASTRON 101, 102, 103, 120. PHYSICS 103 and the four astronomy courses allow students who have taken only high school mathematics to explore important ideas in the physical sciences.

## Major in Physics

The physics major is designed to help students acquire a broad and varied background in physics and related fields. The three basic steps toward completing the physics major are (1) fulfilling prerequisites in introductory physics and calculus; (2) taking a core sequence of courses in classical physics, modern physics, and mathematics; and (3) completing a course concentration.

#### Departmental courses

# Basic courses (6 units)

- MATH 214-1,2,3
- PHYSICS 125-1,2,3 or 135-1,2,3
- Core sequence (9 units)
- MATH 215, 217
- 1 quarter from MATH 221, 290-1,2,3, 291-1,2,3
- MATH 316
- PHYSICS 330-1, 332, 333-1, 339-1, 359-3

#### Concentration

Majors must choose one or more of the following areas:
Advanced physics (6 units) PHYSICS 330-2, 333-2, 339-2, 359-1 Two other 300-level physics or astronomy courses except PHYSICS 335, 398, and 399 and ASTRON 399

- Astronomy (6 units) PHYSICS 330-2, 333-2, 339-2
- ASTRON 220
- Two other 300-level astronomy classes except 398 or 399
- Biomedical Physics (8 units) CHEM 101 and 102 or 171 and 172 PHYSICS 359-1 BME 301, 302, 320, and 2 courses selected from 321,
- 323, or 327 *Computational Physics (7 units)*Prerequisite: knowledge of Fortran, C, or C++
  ES APPM 311-1 or 346
- MATH 330-1
- PHYSICS 252, 359-1
- Three electives chosen from the following: at least 1 300-level physics or astronomy course (excluding 335, 398, and 399) ES APPM 311-2,3
- ES APPM 322-0 COMP SCI 310
- COMP SCI 310 COMP SCI 336 MATH 313-1,2
- MATH 317-1,2
- матн 330-2,3
- STAT 330-1,2
- Materials Physics (8 units) CHEM 101 and 102 or 171 and 172 PHYSICS 337, 339-2
- MAT SCI 316-1,2 plus 2 courses chosen from 332, 355, 360, 361, or 380

Students intending to go to graduate school to continue their study of physics and/or astronomy should also consider taking some or all of the following:

- 2 or 3 units of 399 undertaken with the supervision of a faculty member and consisting of a research project in the student's area of concentration
- MATH 305, 334
- Selected introductory graduate courses such as PHYSICS 411-1,2

Students should discuss specific options in undertaking this advanced program of study with the director of undergraduate studies before the end of the sophomore year.

# **Minor in Physics**

The minor in physics gives students a basic understanding of the most essential concepts in the field. It carries the same prerequisites as the physics major, a somewhat lighter core, and two physics electives. Students choosing the minor in physics must also complete the following six prerequisites or their equivalent.

**Prerequisites:** MATH 214-1,2,3; PHYSICS 125-1,2,3 or 135-1,2,3

#### Minor sequence (8 units)

- MATH 215, 217, 221 or 290-1,2,3 or 291-1,2,3
- PHYSICS 330-1; 333-1; 335 or 339-1
- Two other 300-level physics or astronomy courses except 398 and 399

## **Physics Second Major for ISP Students**

The Integrated Science Program (ISP) is a highly selective BA program in Weinberg College that includes PHYSICS 125-1,2,3 and 339-1,2 and ASTRON 331 as part of its curriculum. Application to this program is made directly to ISP. It is possible to complete a double major in both ISP and physics by taking 6 additional upper-level courses in physics and astronomy:

- PHYSICS 359-1 or -3
- 4 courses chosen from any physics or astronomy 300level course (excluding 335-0, 398, and 399). These 4 elective courses must include completion of either of the 2-quarter sequence courses PHYSICS 330-1,2 or 333-1,2.

Students pursuing an ISP/physics double major may not substitute ISP 398 for any physics or math course in the ISP curriculum.

## Honors in Physics or Astronomy

The honors program in physics or astronomy provides outstanding physics or astronomy majors with the opportunity to participate in research under the supervision of a faculty adviser selected by the student. The program culminates in a written report that, in conjunction with the student's academic record, forms the basis for faculty decisions on the award of departmental honors. (Note: Students may participate in research without being in the honors program. Students are welcome to initiate research projects by enrolling in 399 at any point in their undergraduate studies.)

The honors program is administered by the department's Undergraduate Curriculum Committee. This committee consists of the director of undergraduate studies, the assistant chair, and three other faculty members appointed by the chair of the department. The director of undergraduate studies serves as the departmental honors coordinator.

Physics and astronomy majors are eligible to participate in the honors program when they maintain an overall grade point average of 3.3 or higher and a grade point average of 3.3 or higher in all physics, astronomy, and mathematics courses. These criteria also apply to all classes taken after the student has formally entered the honors program. Students who do not satisfy these requirements at graduation cannot be granted departmental honors.

Students who meet the above criteria and wish to participate in the honors program must notify the director of undergraduate studies. If students have not yet selected an honors research adviser, the director can assist them in finding an appropriate faculty mentor.

Further details on completing the honors program and writing the honors thesis can be obtained from the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

## The Teaching of Physics

Weinberg College students pursuing a major in physics who also wish to be certified for secondary teaching must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

## Advanced Placement

Freshmen who have taken a calculus-level physics course in high school may waive parts of the introductory physics sequence in the following ways:

- A score of 4 or 5 on the College Board Advanced Placement Physics C1 examination (Mechanics) and/or the C2 examination (Electricity and Magnetism) will give the student full credit for PHYSICS 135-1 and/or 135-2, respectively.
- A score of 4 or 5 on the College Board Advanced Placement Physics B exam (algebra-based physics) will give the student full credit for PHYSICS 130-1 and 130-2.
- A passing score on the departmental placement examinations, given during New Student Week, will allow a student to place out of any or all parts of the 130-1,2,3 or 135-1,2,3 sequences. (No college credit is given for placing out of the course.)
- Students who have taken college-level physics on the campus of an accredited college while in high school may apply to have the credit transferred to Northwestern. A transcript from the college is needed. "College-level" classes taken at a high school are not eligible for transfer credit.

# **Pbysics**

## **Courses Primarily for Undergraduates**

**PHYSICS 103-0 Ideas of Physics** Topics in modern physics. Content varies: for example, relativity, the physics of music, and the progress of physics through history. Requires only high school mathematics and is designed for nonscience majors. PHYSICS 125-1,2,3 General Physics for ISP General

physics course relying extensively on calculus. Similar to 135-1,2,3 but more advanced and intended for ISP students. A concurrent advanced calculus course, MATH 291-1,2,3, is offered by the mathematics department. Prerequisite: first-year standing in ISP or consent of the department.

**PHYSICS 130-1,2,3 College Physics** Algebra-based physics primarily for premedical students who do not need to take calculus-based physics. Topics covered are similar to those of 135-1,2,3. Prerequisites: algebra and trigonometry.

**PHYSICS 135-1,2,3 General Physics** Classical physics for science and engineering majors and premedical students. **1.** Mechanics. Prerequisites: MATH 214-1,2; concurrent registration in MATH 214-3. **2.** Electricity and magnetism. Prerequisite: 135-1. **3.** Introduction to modern physics; wave phenomena. Prerequisite: 135-2.

**PHYSICS 252-0 Introduction to Computational Physics** Computing and its application to physics: Monte Carlo simulation, numerical integration of equations of motion, discrete element methods in electromagnetism. Prerequisite: 135-3.

**PHYSICS 330-1,2 Classical Mechanics 1.** Newtonian mechanics, oscillations, the Lagrangian and Hamiltonian formalisms, central-force motion. **2.** Motion in a non-inertial reference frame, kinematics of rigid modes, systems with many degrees of freedom. Prerequisites: 135-1 or equivalent; MATH 215, 217, 221, or equivalent.

**PHYSICS 331-0 Thermodynamics** Equations of state, the three laws of thermodynamics, entropy, phase changes, ideal gas, applications. Prerequisites: 135-1,2,3 or equivalent.

**PHYSICS 332-0 Statistical Mechanics** Ideal gas, Boltzmann distribution, transport phenomena, fluctuation theory, Bose-Einstein and Fermi-Dirac statistics. Prerequisites: 330-1, MATH 215, 217, 221, or equivalent.

PHYSICS 333-1,2 Advanced Electricity and Magnetism
1. Electrostatics and magnetostatics, multipole expansion, solutions of Laplace's equation, images, analytic functions.
2. Maxwell's equations, electromagnetic equations, electromagnetic wave propagation and radiation, microwave cavities, diffraction. Prerequisites: 135-1,2,3; MATH 215, 217, 221, or equivalent.

**PHYSICS 335-0 Modern Physics for Nonmajors** Survey of modern physics for nonmajors with a technical background. Relativity and quantum physics; nuclear, atomic, and molecular structure. Prerequisites: 135-1,2,3 or equivalent. Does not fulfill 300-level requirement for majors.

**PHYSICS 337-0 Introduction to Solid-State Physics** Electrons in periodic lattices; phonons; electrical, optical, and magnetic properties of metals and semiconductors; superconductivity. Prerequisites: 339-1,2.

**PHYSICS 339-1,2 Quantum Mechanics** Introduction to quantum theory. Applications to atomic and molecular systems. The harmonic oscillator, the one-electron atom,

the hydrogen molecule, barrier penetration. Prerequisites: second-year standing in ISP or 330-1, 333-1; MATH 316.

**PHYSICS 339-3 Nuclear Physics** Nuclei and their constituents, nuclear models, alpha and beta decay, nuclear fission and fusion, the strong, electromagnetic and weak interactions, and the fundamental particles and particle schemes. Prerequisites: 339-1,2.

**PHYSICS 359-1,3 Physics Laboratory 1.** Introduction to modern electronics, construction of elementary analog and digital circuits. **3.** Classic experiments in atomic, nuclear, and solid-state physics using modern electronics and micro-computers. Independent work. Prerequisites: 333-1,2 or consent of instructor; 359-1 is not a prerequisite for 359-3.

**PHYSICS 398-0 Honors Independent Study** Individual study under the direction of a faculty member. Open only to advanced students pursuing departmental honors.

**PHYSICS 399-0 Independent Study** Opportunity to study an advanced subject of interest under the individual direction of a faculty member. Open to all advanced students; consent of instructor required.

# Astronomy

All 100-level astronomy courses are specifically designed for students without technical backgrounds and require a mathematics background of only high school algebra.

**ASTRON 101-0 Modern Cosmology** Modern views on the structure of the universe, its past, present, and future. For nonscience majors who seek to follow 120 with a more detailed course.

**ASTRON 102-0 Milky Way Galaxy** Structure of the galaxy, star formation, interstellar clouds and dust, star clusters, neutron stars and black holes, the galactic center. For non-science majors who seek to follow 120 with a more detailed course.

**ASTRON 103-0 Solar System** The planets and their moons, the sun, comets, asteroids. For nonscience majors who seek to follow 120 with a more detailed course.

**ASTRON 120-0 Highlights of Astronomy** Acquaints students with modern ideas about the solar system, stars, galaxies, and the universe. Emphasizes fundamental principles and underlying concepts.

**ASTRON 220-0 Highlights of Astrophysics** Use of introductory physics (mechanics, electromagnetism, thermodynamics, and modern physics) to cover astrophysical topics starting with the solar system and ending with the largescale structure of the universe and cosmology. Prerequisites: PHYSICS 135-1,2,3 or equivalent.

**ASTRON 325-0 Stellar Structure and Evolution** Physical conditions in stellar interiors. Comparison of theory and observations in stellar evolution. White dwarfs, neutron stars, and black holes. Offered alternate years. Prerequisite: 220.

**ASTRON 326-0 High-Energy Astrophysics** Physical processes occurring at high temperatures and pressures. Offered alternate years. Prerequisite: 220.

**ASTRON 328-0 Interstellar Matter** Mathematical and statistical treatment of interstellar matter. Physics of gas and dust clouds. Offered alternate years. Prerequisite: 220.

**ASTRON 329-0 Galactic Structure and Dynamics** Stellar dynamics, including potential theory, stellar orbits, equilibria of collisionless systems, and spiral structure. Offered alternate years. Prerequisite: 220.

**ASTRON 330-0 Cosmology** Concepts and observational foundations of modern big bang cosmology. Offered alternate years. Prerequisite: 220.

**ASTRON 331-0 Astrophysics** Stellar structure and evolution: nucleosynthesis, supernova phenomena, white dwarfs, neutron stars, and black holes. Prerequisite: PHYSICS 339-3. Limited to students enrolled in ISP or by consent of the physics department.

**ASTRON 360-0 Instruments and Techniques for Astrophysics** Introduction to the theory, design, and operation of modern X-ray, optical, and radio astronomical instrumentation. Offered alternate years. Prerequisite: 220.

**ASTRON 399-0 Independent Study** Opportunity to study an advanced subject under the individual direction of a faculty member. Open to all advanced students. Consent of instructor required.

# **Political Science**

A knowledge of political science is central to any occupation or profession that needs an understanding of human behavior, to the relationships between people and governments, or to the analysis and communication of information about public problems. A background in political science is virtually indispensable for people in politics and government, lawyers, journalists, scientists, business managers, or people working in medicine. Such professionals are in constant need of information on and understanding of the political, legal, governmental, and public implications of their fields.

The Department of Political Science is internationally recognized for excellence at both the undergraduate and graduate levels. The department is especially strong in American politics and government; the politics of foreign countries, especially in Europe, Latin America, Asia, and Africa; international studies; law and politics; political economy; and political theory. Much of the department's work is associated closely with the activities of the Program of African Studies, the Center for International and Comparative Studies, and the Institute for Policy Research, all of which are outstanding in their respective specialties.

The department offers an undergraduate major and minor and also graduate programs leading to the MA and PhD degrees in political science.

## **Major in Political Science**

As soon as students have declared a major in political science, a department adviser can be assigned to consult regularly with them. Students planning to major in political science should try to complete the 200-level prerequisites and one 300-level course by the end of their sophomore year.

To prepare for research, students normally take the required 395 in the junior year. They should take at least one of the following before taking 395: 310, 311, 312. All majors also are urged to acquire a working knowledge of a foreign language.

# Departmental courses

*Basic courses:* 3 courses chosen from 201, 204, 220, 221, 230, 240, 250

*Major courses:* 7 300-level courses in political science, 1 of which must be 310, 311, or 312 and another of which must be 395

**Related courses:** 5 quarter-courses in anthropology, economics, history, philosophy, psychology, or sociology, of which at least 2 must be at the 300 level; no more than 1 may be at the 100 level

## **Minor in Political Science**

The minor in political science offers students the opportunity to acquire a solid foundation in the discipline as well as significant exposure to advanced courses. It also is designed to allow students to develop specialized competencies.

## Minor course requirements (6 units)

- At least 2 200-level courses chosen from 201, 204, 220, 221, 230, 240, 250
- 4 additional political science courses, at least 3 at the 300 level

Students should begin pursuing the minor with 200level courses, which provide a general introduction to major subfields of political science as well as background for 300-level courses. They may pursue specialized interests in the minor. For example, for students who aspire to a legal career, an appropriate minor might concentrate on law and politics and could include 230, 330, 331, 332, or 333. Minors may follow similar pathways for concentrations in political philosophy, urban politics and policy, international relations, comparative politics, and American political processes, or they may choose an array of courses that cut across subfields rather than concentrate on one or two areas. To develop an individual program of study for a minor in political science, students must consult with the director of undergraduate studies in the department.

## Four-Year BA/MA

The department offers a four-year BA/MA program in political science for outstanding undergraduate majors. Interested students should contact the director of undergraduate studies no later than the winter quarter of the junior year and should see Four-Year Master's Programs in the Undergraduate Education section of this catalog.

### Honors in Political Science

Majors with outstanding records both overall and within the department may apply for graduation with departmental honors. The primary route to earning the departmental recommendation for honors involves enrolling in 398, a two-quarter course that requires writing a senior thesis. Students interested in exploring an alternate route to honors should meet with the director of undergraduate studies in the junior year. Either way, departmental honors requires outstanding work in connection with a research project. See also Honors under Academic Policies earlier in this section of the catalog.

## The Teaching of Political Science

Weinberg College students pursuing a major in political science who also wish to be certified for secondary teaching of political science with history must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP as early as possible in their academic careers.

## **Courses Primarily for Undergraduates**

#### American Politics

These courses deal with the dynamics of behavior within and between domestic political institutions. Although focusing on American politics, the courses usually involve comparisons with behavior and institutions in foreign countries.

**POLI SCI 220-0 American Government and Politics** The structure and process of American politics from competing perspectives. Analysis of representation, voting, interest groups, parties, leadership, and policy-making institutions. The gateway course for the American politics subfield.

**POLI SCI 221-0 Urban Politics and Policies** Structure of local and regional political power and its relation to social and economic structure of community.

**POLI SCI 320-0 The Presidency** Contemporary presidency in terms of recruitment, presidential character, public opinion, institutional constraints, and foreign versus domestic policy making. Prerequisite: 220 or equivalent.

**POLI SCI 321-0 Community Political Processes** Selected problems of mobilizing and exercising political power in local and regional jurisdictional units. Relationships between political structure and community needs and demands. Prerequisite: 221.

## POLI SCI 323-0 Public Opinion and Voting Behavior

Who votes and for whom. Social, psychological, economic, and political factors influencing election choices. Sources of opinions. Focus on American presidential elections but some comparative and nonpresidential material. Prerequisite: 220 or equivalent.

**POLI SCI 324-0 Political Parties and Elections** Role of political parties in a democratic society. Topics include nomination, national conventions, political funding, campaigns, party organization, and national, state, and local parties.

**POLI SCI 325-0 The Legislative Process** Organization of legislatures to make public policy; legislative-executive relations; impact of interest groups and other forms of citizen activity on legislative decision making. Emphasis on U.S. Congress. Prerequisite: 220 or equivalent.

**POLI SCI 327-0 Black American Politics in the United States** Historical survey of black politics and relationship of blacks to the government. Relevance of reformist and revolutionary strategies in the struggle for black liberation.

## POLI SCI 328-0 State Politics of the United States

Political process at the state level in the United States. Variety of institutional forms and decision-making processes attached to different kinds of issues existing in the several states. Prerequisite: 220.

#### **Comparative Politics**

This field analyzes political behavior and institutions in foreign countries and areas of the world. Some courses concentrate on understanding the politics of specific national systems, while others focus on certain types of political phenomena and make cross-national comparisons.

**POLI SCI 250-0 Introduction to Comparative Politics** Emphasis may be on industrialized and/or developing states; socialist and/or capitalist states. Major issues include regime-society relations, revolution, and policy making.

**POLI SCI 343-0 United States and Latin America** Interactions between U.S. foreign policy and Latin American politics. The evolving importance of Latin America in U.S. geostrategic objectives from the turn of the century through the Cold War and during the emerging post–Cold War period. How the projection of U.S. power and influence shapes the domestic politics of selected countries.

**POLI SCI 346-0 Politics of European Unification** The development and prospects of the European Union are examined by placing it in geopolitical and historical context.

**POLI SCI 351-0 Peasant Politics** Characteristics of agrarian economic structures, social organizations, and peasant politics, movements, and revolutions; elite responses to and interactions with rural society through public policy, clientelist mobilization, etc.

**POLI SCI 352-0 Politics of East Asia** Examines East Asia as a site for studying various concepts in comparative politics: war, revolution, imperialism, modernization, dependency, development, authoritarianism, party politics, and democratization.

POLI SCI 353-0 Politics in Latin America Patterns of socioeconomic development and regime forms in Latin

America. Interaction of internal and international economic and political structures and processes.

**POLI SCI 354-0 Southeast Asian Politics** Exploration of the political economy of Indonesia, Singapore, Burma, the Philippines, Thailand, Malaysia, and Vietnam, as well as the smaller states of Laos, Cambodia, East Timor, and Brunei. Focus on the post–World War II period; colonial influences and the Japanese invasion. Important themes include industrialization, human rights, and democracy.

**POLI SCI 357-0 Politics of Postcolonial States** Problems and political behavior in underdeveloped areas in regard to their internal affairs and international relations. Interplay between economic conditions and political patterns.

**POLI SCI 358-0 Nationalism** Social, linguistic, religious, and political bases of the rise of modern nationalism in Europe, Asia, and Africa; wars of national liberation in relation to imperialism and colonialism.

**POLI SCI 359-0 Politics in Africa** Political structures and relation of cultural factors to political stability and change; development of modern political systems.

**POLI SCI 360-0 Comparative Racial Politics** The interplay of racial, socioeconomic, and cultural tensions in Germany, Trinidad, and Britain. Methods of comparative analysis used to identify and distinguish patterns of racial politics between and within multiracial nation-states. Theories and concepts of race and ethnicity and their relationship to issues of state power, national identity, and social policy.

**POLI SCI 361-0 Democratic Transitions** Causes for emergence and breakdown of democracy in cases from Europe, Latin America, Africa, and Asia. Focus on relationship between capitalist economic development, international forces, and timing of democratization across the globe.

**POLI SCI 362-0 Politics of Western Europe** Historical development, mass behavior, interest groups and parties, policy making, and social and economic policy.

#### International Politics

This field includes the study of major actors and arenas in the world scene, major processes through which cooperation and conflict are managed in the international system, and ways in which change occurs and resources become allocated in the global system.

**POLI SCI 240-0 Introduction to International Relations** Surveys basic concepts and processes in international and transnational relations, including major actors, management of conflict and cooperation, and systemic changes at the global level. The gateway course to the international politics subfield.

**POLI SCI 340-0 Global Society** Survey of human problems of global dimensions, such as population, poverty, human rights, and war. Evaluation of the adequacy of existing institutions for handling these problems. Alternative forms of global organization.

**POLI SCI 342-0 International Organizations** Role of international organizations in international relations. Similarities and differences between international and other political institutions. Comparison of different types of international organizations.

# POLI SCI 344-0 Advanced Studies in International

**Relations** Integrated analysis of collaborative and conflict processes in international politics, with intensive work on topics of special interest to each student. Prerequisites: 240 and/or 340; 342 recommended.

**POLI SCI 345-0 National Security** Problems of maintaining national security in the military and economic spheres; deterrence theory, nuclear weapons, arms control, and defense policy among the major powers.

# Law and Politics

These courses study the role of the judiciary at the national, local, and emerging levels of government. They also investigate issues in jurisprudence and the administration of justice.

# POLI SCI 230-0 Introduction to Law in the Political

**Arena** Roles of law in society and politics — how disputes are resolved, organization of the bar, why people litigate, the consequences of litigation. Compares common law, civil code, and other legal traditions.

**POLI SCI 330-0 The Politics of Local Justice** Local justice systems, with emphasis on trial courts, civil and criminal litigation, and the political consequences of the involvement of the law in social conflicts.

**POLI SCI 331-0 Appellate Processes** Operation of appellate courts, with emphasis on the United States Supreme Court. Decision making by appellate courts and the development of public policy.

**POLI SCI 332-0 Constitutional Law I** Introduction to interpretation of the United States Constitution by the Supreme Court. Judicial review, federalism, separation of powers, economic and religious liberty, and personal privacy. Prerequisite: 220 or 230.

**POLI SCI 333-0 Constitutional Law II: Civil and Political Rights** Consideration of decisions of the United States Supreme Court dealing with civil and political rights, including equality, freedom of expression, and criminal procedures. Prerequisite: 220 or 230.

# Political Theory

These courses examine the ideas that inform the thinking of today's citizens, representatives, and political scientists. They are organized by historical periods and conceptual similarity.

**POLI SCI 201-1,2 History of Political Thought** An introduction to political theory by way of consideration of major figures and topics from the classical period through the 19th century. Topics include justice, the Greek polis, the modern state, individualism, representative democracy. **1.** Philosophy and democracy in Ancient Greece. **2.** Politics and theory in modern Europe and early America.

**POLI SCI 301-0 Moral Dilemmas and Political Theory** Study of the political implications of moral theory. Consideration of how traditional moral theories deal with dilemmas of citizenship, nationality, and abortion. Texts include *Antigone*, The Book of Ruth, Kant's *Groundwork*,

**POLI SCI 302-0 Critics of Modernity** Examination of late 19th- and early 20th-century social and political thought in the works of writers such as Marx, Weber, Mill, Kafka, Darwin, Nietzsche, Freud, and De Beauvoir.

POLI SCI 303-0 Advanced Topics in Political Theory

Sustained reflection on one problem (e.g., freedom, republicanism, sexuality) or author (e.g., Plato, Machiavelli, Tocqueville, Arendt). Topics vary. May be repeated for credit with different topics. Prerequisite: 201-1, 201-2, or equivalent.

# Public Policy and Political Economy

Mill's Utilitarianism, and others.

The consequences of governmental action on political, social, and economic activity are analyzed in these courses. Other courses concerned with public policy and political economy are listed under the law and politics and international politics subfields.

**POLI SCI 204-0 Politics and Nature** Introduction to the study of environmental policy. Consideration of some fundamental issues and concepts concerning the maintenance of a livable planet, such as sustainable development, common property regimes, transformation of the environmental movement from a primary emphasis upon nature conservation to a complex set of foci concerning biodiversity, possible climate change.

**POLI SCI 371-0 Environmental Politics** Political problems associated with human impact on natural environment; pollution, natural resources, public lands, land use, energy, and population.

POLI SCI 372-0 The Politics of the Global Economy

Interactions of politics and economies in the relations between nations and among subnational groups. Theories of imperialism, dependency, and the evolution of the global system; international policy and institution reform.

**POLI SCI 374-0 Politics and Markets** How democratic politics and markets interact. Examines the politics of policy choices democratic governments make and the economic impact those choices have. Explores some of the most significant ways in which the United States, Western Europe, and Japan differ.

# POLI SCI 375-0 Comparative Politics of Business-

**Government Relations** Relations between business and government in a variety of economic, social, and political contexts. Patterns of influence in both business and government. Theories of business influence in politics, such as pluralism, corporatism, collective action, and instrumental and structural Marxism.

# **Research** Methodology

Courses in this field prepare students to do original research on the causes and consequences of political phenomena. The methodological techniques are often transferable to research problems in government and business.

# **POLI SCI 310-0 Elementary Statistics for Political**

**Research** Measuring political data, summarizing observations, analyzing contingency tables. Parametric and nonparametric tests of hypotheses. Basics of multiple regression. SPSS computer usage.

## POLI SCI 311-0 Methods of Political Research

Introduction to methods and techniques of political research: research design, experimentation, comparative inquiry, measurement, data collection, and data analysis. Application of these methods to political phenomena.

**POLI SCI 312-0 Logic of Political Inquiry** Political science as "science." Identity sources, construction, functions, and validation of social science theory and explanation from varied perspectives.

**POLI SCI 315-0 Introduction to Positive Political Theory** Rational-choice modeling: developing underlying principles through central theoretical topics as applied to particular

# Seminars, Independent Study, and Special Opportunities

empirical issues.

395 is required of all political science majors, who will be notified of scheduling arrangements in advance. 395 is ordinarily taken in the spring quarter of the junior year or the fall quarter of the senior year. With consent of the department, students may receive full credit for more than one quarter of 395 provided that, if 398 and 399 are also taken, 395 with 398 and 399 do not exceed a total of four course credits.

## **POLI SCI 390-0 Special Topics in Political Science**

Designed for investigation of topics that are of current interest to students and faculty but are not adequately covered by other course offerings. No prerequisites. Offered in different quarters as announced.

## **GEN LA 393-0 Chicago Field Studies Internship** See General Studies.

**POLI SCI 394-0 Senior Linkage Seminar** Topics vary. Open only to seniors.

**POLI SCI 395-0 Political Research Seminar** Led by different members of the department, small seminars in research topics, providing students the chance to conduct research.

**POLI SCI 398-1,2 Honors Tutorial** For seniors with excellent records, by department invitation. First quarter taken fall or winter for K grade; final grades given after research paper at end of second quarter. Two consecutive quarters. Prerequisite: 395.

POLI SCI 399-0 Independent Study Study and research programs for unusual needs of political science majors. A

written proposal, signed by the professor with whom the student will study, to be submitted to the department.

# Portuguese

See Hispanic Studies.

# Psychology

The study of psychology covers a wide range of topics in the natural and social sciences. It provides students a unique opportunity to increase their understanding of themselves and other people as developing individuals, biological organisms, and participants in society. Because of the strong research orientation of the department, it also provides an understanding of how research is done and an opportunity to participate directly in research.

A major in psychology can lead in various directions after graduation. Graduate study can prepare students for a career as an academic, clinical, industrial, or other kind of psychologist. Psychology is a useful major for students planning careers in medicine, law, or management, as the department is strong in cognitive science, psychobiology, psychopathology, and social psychology. Whether or not students continue their education beyond the bachelor's degree, they will find that the psychology major provides knowledge about human behavior and methods of research and data analysis that is valuable in business, the helping professions, and other occupations.

At the graduate level, the department recognizes several specialties with programs leading to the PhD. Though opportunities for study and research are available to undergraduates in all these areas, there is only one undergraduate psychology major. Its requirements are designed to give every student a mastery of the basic methods and a balanced exposure to different aspects of psychology. Beyond that, students are encouraged to follow their interests in regular courses and in independent study. Extensive laboratory facilities and research experiences are available.

# Major in Psychology Departmental courses *Basic course:* 110

Anion accuracy 201, 205, and

*Major courses:* 201, 205, and at least 7 additional psychology courses, including

- At least 1 upper-level research course chosen from 301, 311, 313, 316, 321, 326, 333, 334, 335, 342, 351, 360, 362, 363, 386, 397-2, 398 (any course listed both here and in one of the following two categories may be counted toward that category as well)
- At least 2 personality, clinical, or social psychology courses chosen from 204, 215, 301, 303, 306, 316, 326, 384, 385, 386
- At least 2 cognitive psychology or neuroscience courses chosen from 212, 228, 311, 312-1,2, 321, 324, 333, 334, 335, 360, 361, 362, 363
- At least 3 300-level courses

- No more than 2 courses chosen from COG SCI 207, 210, and 211 may be counted toward the requirements
- No more than 1 quarter of 397-1 and 399 may be counted toward the requirements
- No more than 1 quarter of 397-2 may be counted toward the requirements
- No more than 2 total credits of 397 and 399 in any quarter
- No more than 9 total credits of 397, 398, and 399 may be counted toward Weinberg College graduation requirements

# **Related courses**

- Any 3 courses from the following: mathematics at the 200 level or higher, statistics at the 300 level or higher, and computer science at any level
- Any 2 courses from biological sciences, chemistry, or physics

## **Minor in Psychology**

The minor in psychology reflects the view that the undergraduate study of psychology should combine a methodological core with breadth of content. The minor therefore contains the general prerequisite (110), the two central methods courses (201 and 205), and at least one course from each of the two main content areas defined for the major.

## Minor course requirements (7 units)

- 110, 201, and 205
- 4 additional psychology courses, including At least 1 personality, clinical, or social psychology course chosen from 204, 215, 303
- At least 1 cognitive psychology or neuroscience course chosen from 212, 228, 312-1, 324, 360, 361, 362, 363 At least 2 300-level courses
- No more than 1 quarter of 397-1 and 399 may be counted toward the requirements

#### **Psychology Second Major for ISP Students**

The Integrated Science Program is a highly selective BA program within Weinberg College (see Integrated Science Program). Students in ISP who also wish to complete a major in psychology should consult with the program director and the director of undergraduate studies in psychology as early as possible to determine their specific additional major requirements.

# **Honors in Psychology**

Each spring quarter a few juniors with superior records in psychology are invited into 398 for the following academic year. Those who accept carry out a yearlong research project that, if completed, commonly leads to departmental honors in psychology. In exceptional circumstances honors in psychology may also be achieved by carrying out a major research project through two or more quarters of 397 or 399. For more information, consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

## **Courses Primarily for Freshmen and Sophomores**

**PSYCH 110-0 Introduction to Psychology** Basic psychological facts and principles of normal behavior. Laboratory experience is included and provides an introduction to psychology as a research science.

**PSYCH 201-0 Statistical Methods in Psychology** Measurement. Descriptive statistics. Probability and sampling. T-test, ANOVA, correlation, and regression. Prerequisite: 110; some college mathematics recommended.

**PSYCH 204-0 Social Psychology** Psychological processes in social behavior, including thinking about and interacting with other people and groups. Prerequisite: 110.

**PSYCH 205-0 Research Methods in Psychology** Methods of psychological research; experimental design; reliability and validity; review and application of statistics; execution and reporting of psychological research. Prerequisite: 201.

**COG SCI 207-0 Introduction to Cognitive Modeling** See Cognitive Science.

**COG SCI 210-0 Language and the Brain** See Cognitive Science.

**COG SCI 211-0 Learning, Representation, and Reasoning** See Cognitive Science.

**PSYCH 212-0 Introduction to Neuroscience** Brain processes related to memory, perception, and motivation. Dissection, histology, and surgery for brain stimulation. A prior course in biology is strongly recommended.

**PSYCH 215-0 Psychology of Personality** Nature of personality and its development. Modern theoretical interpretations. Biological and social bases of individual differences. Prerequisite: 110.

**PSYCH 218-0 Developmental Psychology** Development of cognitive, social, and other psychological functions. Prerequisite: 110.

**PSYCH 228-0 Cognitive Psychology** Introduction to research into mental processes such as memory, reasoning, problem solving, and decision making. Prerequisite: 110.

## **Courses Primarily for Juniors and Seniors**

**PSYCH 301-0 Personality Research** Research in personality, with emphasis on experimental approaches and methods. Basic concepts of test reliability and validity. Students conduct original research. Prerequisites: 205, 215.

**PSYCH 303-0 Psychopathology** Understanding the nature of psychological, emotional, and behavioral disorders. Emphasis on current evidence regarding causes and characteristics of these disorders. Prerequisite: 110.

**PSYCH 306-0 Introduction to Clinical Psychology** Definition and history of clinical psychology, personality theory in clinical psychology, diagnosis and classification of disorders, assessment, psychotherapy, and ethical issues.

Prerequisite: 303.

**PSYCH 311-0 Human Learning and Memory** The nature of human learning and memory with an emphasis on research methodology and report writing. Students conduct original research. Prerequisites: 205, 228.

**PSYCH 312-1,2 Neurobiology and Behavior 1.** Neurophysiology, neuroanatomy, and electrophysiological substrates of behavior. Prerequisites: 110; one biological sciences course. **2.** Neuroanatomical, electrophysiological, and biochemical substrates of psychological processes. Prerequisite: 312-1 or equivalent; 205 recommended.

**PSYCH 313-0 Research-Focused Seminar** Topic to be announced. Discussion and critical analysis of research methods and findings in a particular area of psychology. Prerequisite: 205; additional prerequisites may apply. May be repeated for credit with different topic.

**PSYCH 314-0 Special Topics in Psychology** Topic to be announced. Prerequisites vary. May be repeated for credit with different topic.

**PSYCH 316-0 Experimental Social Psychology** Social psychological research techniques, including laboratory experiments, field experiments, and quasi-experiments. Students conduct original research. Prerequisites: 204, 205.

**PSYCH 321-0 Neuroscience and Behavior Laboratory** Classical exercises in the physiological psychology laboratory, including brain-wave recording and electrophysiology. Prerequisites: 205, 312-2.

**PSYCH 324-0 Perception** Human perception, particularly vision. Also hearing, taste, smell, and touch. Biological foundations, development, and disorders of perception. The senses in everyday life. Prerequisite: 110.

**PSYCH 326-0 Social and Personality Development** Research methods, theories, and facts relating to the development and modification of attitudes and behavior. Prerequisite: consent of instructor. Prerequisites: 205; 204, 215, or 218.

**PSYCH 333-0 Psychology of Thinking** Research methods and recent experimental findings for types of human thinking. Students conduct original research. Prerequisites: 205, 228.

**PSYCH 334-0 Psychology of Language** Exposure to original research, theoretical and methodological criticism, and experimental design related to psychology and language. Prerequisites: 205 and 228 or consent of instructor.

**PSYCH 335-0 Decision Making** Human decision making from both descriptive and prescriptive perspectives. Theories and models of decision making applied to a variety of contexts. Prerequisites: 205, 228.

**PSYCH 337-0 Human Sexuality** Sexual development and differentiation, deviations, dysfunctions, and controversies in sexology. Prerequisite: 110.

**PSYCH 339-0 Psychology of Gender** Examination of sex differences and similarities. Evaluation of explanations for

differences. Review of how gender affects achievement, relationships, and mental health. Prerequisite: 110.

**PSYCH 342-0 Biological Bases of Mental Illness** Effects of brain abnormalities on cognition, emotion, and behavior. Neurological aspects of mental disorders. Prerequisites: 205 and 303 or consent of instructor; 212 or 312-1 strongly recommended.

**PSYCH 351-0 Advanced Statistics and Experimental Design** Advanced analytic techniques, including model fitting, analysis of variance, and multidimensional scaling. Prerequisites: 205, MATH 214-3.

**PSYCH 360-0 Human Memory and Cognition** In-depth survey of recent work in human memory and cognition. Prerequisite: 205 and 228 or consent of instructor.

**PSYCH 361-0 Brain Damage and the Mind** Survey of human cognition as studied via investigations of brain damage and brain-imaging techniques. Prerequisite: 110, 212, or COG SCI 210.

**PSYCH 362-0 Cognitive Development** Development of cognition and perception, including development of memory, concepts, language, and expertise. May focus on one or more age groups. Prerequisites: 205; 218 or 228; or consent of instructor.

**PSYCH 363-0 Images of Cognition** Study of brain processes underlying cognition. Analysis of brain structure and function. Introduction to imaging techniques including fMRI, PET, and ERP. Prerequisites: 205; 212, 228, 312-1, 361, COG SCI 210, or consent of instructor.

**PSYCH 384-0 Interpersonal Relations** Psychological processes in social perception and interaction; focus on attraction and relationships, aggression, and conflict. Prerequisite: 204.

**PSYCH 385-0 Psychology of Attitudes** Survey of social psychological research on attitudes; focus on the formation of attitudes, the relationship between attitudes and behavior, and attitude change. Prerequisite: 204.

**PSYCH 386-0 Stereotyping and Prejudice** Analysis of the causes and consequences of stereotyping and prejudice, as well as methods used to study these issues. Students conduct original research projects. Prerequisites: 204, 205.

**PSYCH 395-0 Psychobiology Research Seminar** Research methods and advanced topics related to brain function. Limited enrollment. Prerequisite: consent of instructor.

**PSYCH 397-1,2 Advanced Supervised Research** Design, implementation, and reporting of a psychology research project. Prerequisites: 205 and consent of instructor; 397-2 must be taken with the same professor as 397-1.

**PSYCH 398-1,2,3 Undergraduate Honors Seminar** (1–4 units) Senior honors research. Open only by invitation of the faculty.

**PSYCH 399-0 Independent Study** Consent of instructor required.

# Religion

Because religion is a multifaceted phenomenon, the academic study of religion and the religious is a multidisciplinary field. The undergraduate major in religion is designed to develop an understanding of several major religions through study of their historical development, sacred literature, and social manifestations. The faculty's training and the course offerings concentrate on the traditions of Hinduism, Buddhism, Judaism, Christianity, and Islam, as well as on American and Chinese religion, though courses in other areas are presented occasionally. Study of the interaction of two or more traditions constitutes a regular part of the curriculum and the extracurricular seminars, lectures, and discussions. Undergraduate majors enjoy a wide range of extracurricular events and daily association with the faculty, staff, and graduate students.

Students, in consultation with the department adviser, may organize highly individual major programs of study that include courses from this department and other departments in the University. To ensure coherence and balance within the individual programs, students submit their proposed programs for approval to the department director of undergraduate studies.

# **Major in Religion**

The major in religion consists of 12 courses.

- Departmental courses (12)
- 110, 395
- 10 other religion courses

Of the 12 required courses, 10 must be beyond the 100 level, including at least 6 at the 300 or 400 level, 2 in Eastern religions, and at least 2 in Western religions (Christianity, Judaism, Islam). In satisfying the requirement for these 10 courses, students may substitute up to 2 courses on religion from outside the department, chosen from the list of related courses below or approved in advance by the department's undergraduate adviser.

#### **Related courses**

ANTHRO 350 Anthropology of Religion HISTORY 270 Islam in History HISTORY 371 Islamic Institutions HISTORY 374 Historical Background of Jewish-Muslim Relations

PHIL 266 Philosophy of Religion SOCIOL 314 Sociology of Religion and Ideology

## Minor in Religion

The minor in religion provides a coherent and balanced set of courses with work on general theories of religion and Western and Eastern religious traditions. Enrollment in 395 ensures that students completing the minor have the opportunity to interact with religion majors. Students minoring in religion may preregister for courses with majors.

## Minor course requirements (6 units)

## • 110

 5 other religion courses: at least 3 at the 300 or 400 level, at least 1 in Western religions (Christianity, Islam, or Judaism), and at least 1 in Eastern religions

### **Honors in Religion**

Superior students in the department become eligible for departmental honors by writing a senior thesis. This is usually accomplished by enrolling in two quarters of 396 during the fall and winter quarters of their senior year. Students who intend to qualify for honors should notify the undergraduate adviser in writing by the end of the spring quarter of the junior year. For more information, consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

**Courses Primarily for Freshmen and Sophomores RELIGION 110-0 Religion in Human Experience** Religion as it has appeared in the past and as humans continue to express it in their personal and social lives.

## **RELIGION 111-0 Varieties of Religious Tradition**

Introduction to a variety of the major religious traditions of the world.

**RELIGION 210-0 Introduction to the Hebrew Bible** Major genres of Old Testament literature. Basic theological views and the social-political history of ancient Israel.

**RELIGION 211-0 New Testament Origins** The beginning, development, and content of the New Testament. Its Jewish and Hellenistic environment.

**RELIGION 220-0 Introduction to Hinduism** Unity and diversity of Hindu mythology, beliefs, and practices from ancient times to the present.

**RELIGION 222-0 Introduction to Buddhism** The Buddha's life and teachings, the traditions that developed from this teaching, and the systems of meditation, rituals, and ethics.

**RELIGION 223-0 Religion in China** Historical development of religious traditions in China from ancient to modern times; Confucianism, Taoism, and Buddhism.

**RELIGION 224-0 Introduction to Judaism** Main concepts in the theology of Judaism, main rituals and customs, and main institutions.

**RELIGION 225-0 Religion in Japan** Introduction to the religions in Japan from ancient to modern times, including Shinto, Confucianism, Taoism, and Buddhism.

**RELIGION 226-0 Introduction to Christianity** Doctrine, worship, and institutions in the various branches of Christianity.

**RELIGION 227-0 Introduction to Medieval Jewish Philosophy** Medieval Jewish philosophy, focusing on the thought of Moses Maimonides (1138–1204).

**RELIGION 228-0 Introduction to Islam** Principal beliefs and practices of Muslims set against the historic development of the faith.

## **RELIGION 229-0 Introduction to Native American**

**Religions** Diversity and common elements of Native American religious traditions; comparative study of myth, ritual, spiritual philosophy, and practice.

# **Courses Primarily for Juniors and Seniors**

## Buddhism

**RELIGION 323-0 Buddhist Scripture** Origins, development, and content of Buddhist sacred literature.

**RELIGION 324-0 Buddhism in the Contemporary World: Traditional and Reform** Buddhism's reinterpretation of its thought and practice in response to postcolonial modernizations.

**RELIGION 325-0 Theravada Buddhism and Culture** Theravada Buddhism in interaction with its culture.

**RELIGION 348-0 Zen Buddhism** Historical development of Zen Buddhist theory and practice.

**RELIGION 355-0 Topics in Buddhism** May be repeated for credit with different topic.

## Christianity

**RELIGION 302-0 Christian Ethics** Four contemporary moral issues viewed from a variety of Christian approaches.

**RELIGION 351-0 Topics in Christianity** May be repeated for credit with different topic.

**RELIGION 360-0 Medieval Christianity** Christian thought, institutions, and figures of medieval Christianity, c. 500–1500.

**RELIGION 361-1,2 Foundations of Christian Thought** Survey of the development of Christian thought. **1.** Early or traditional Christianity. **2.** Christian thought since the Reformation.

**RELIGION 364-0 The Idea of Sainthood in Christianity** Historical and contemporary conceptions of sanctity, especially in Roman Catholicism and Eastern Orthodoxy.

**RELIGION 365-0 Christian Mystical Theology** Writings of mystics (e.g., Meister Eckhart, *Cloud of Unknowing*, Julian of Norwich, Teresa of Avila) in their cultural context.

## Islam

HISTORY 355-0 Islam in Africa See History.

**RELIGION 357-0 Topics in Islam** Selected topics in Islamic history and thought. May be repeated for credit with different topic.

**RELIGION 371-0 Muhammad, the Jews, and the Origins of Islam** The rise of Islam, including a broad discussion of pre-Islamic Arabia.

**RELIGION 377-0 Trends in Islamic Thought** Quranic, medieval, and modern approaches to problems in faith and social action.

## Judaism

**RELIGION 306-0 Judaism in the Modern World** Radical changes that emancipation and modernity have brought to the religious expression of Judaism.

**RELIGION 307-0 Judaism in the Perspective of Christianity** 19th- and 20th-century Christian thinkers' perceptions of Judaism in relation to Christianity.

**RELIGION 308-0 Christianity in the Perspective of Judaism** 19th- and 20th-century Jewish thinkers' perceptions of Christianity in relation to Judaism.

**RELIGION 313-0 Varieties in Ancient Judaism** Introduction to the Judaisms that flourished from the fifth century B.C. to the third century A.D.

**RELIGION 330-0 Jewish Thought in the 19th Century** Review of Jewish religious/national thought from Moses Mendelsohn to Hermann Cohen.

**RELIGION 331-0 Jewish Thought in the 20th Century** Distinctive themes in the main 20th-century Jewish philosophers.

**RELIGION 334-0 Classical Jewish Thought** An examination of the forms of expression of Rabbinic Judaism: legal, mystical, philosophical, and poetic.

**RELIGION 335-0 The Art of Biblical Narrative** Ways in which the religious imagination of ancient Israel expresses itself through literary artistry.

**RELIGION 336-0 Religion and Mythology of the Ancient** 

**Near East** Myths, religious ideologies, and cultic practices of Sumer, Babylonia, Assyria, and Canaan, including Phoenicia; relation to ancient Greece and Israel, women, literature.

**RELIGION 352-0 Topics in Judaism** May be repeated for credit with different topic.

## **Courses in Method and Comparative Study**

**RELIGION 350-0 Topics in Religion** May be repeated for credit with different topic.

**RELIGION 353-0 Studies in American Religion** May be repeated for credit with different topic.

**RELIGION 390-0 Comparative Study of Religions** History and present use of the comparative method of

studying religions.

**RELIGION 395-0 Theories of Religion** Ways of analyzing critically religious experience and its meaning. Phenomenology of religion, history of religions, comparative religions.

**RELIGION 396-1,2 Senior Seminar** 

**RELIGION 399-0 Independent Study** For advanced students, reading and conferences on special subjects. Consent of instructor required.

See Slavic Languages and Literatures.

# Science in Human Culture Program

# Adjunct Major and Minor in Science in Human Culture

The adjunct major and minor in science in human culture prepare students to confront the impact of science, medicine, and technology on society and on their own lives. The program welcomes science majors interested in thinking beyond the problem sets assigned in their specialized courses as well as students in the humanities who wish to surmount the compartmentalization of knowledge that accompanied the rise of modern science. The adjunct major and minor seek to foster critical thinking about the limits, authority, and impact of science, a mode of understanding that is often said to be the defining feature of modern culture.

For an up-to-date listing of courses and more information about the minor, consult the program Web page at www2.mmlc.northwestern.edu/shc/.

# Adjunct major course requirements (10 units)

The Science in Human Culture major is an adjunct major. Students majoring in Science in Human Culture must also fulfill the requirements of another major. In consultation with their faculty adviser, students in the adjunct major develop a theme based on their particular interests. They then take 10 courses that match their interests from the partial list below. Students must take at least three courses from core courses: two from HISTORY 275-1,2, HISTORY 325, or HISTORY 376-1,2, and one from PHIL 220 or 254. At least six of the classes must be at the 300 level. Also, students must take the senior seminar SHC 398-1. Course substitutions may be allowed with the permission of the program director.

## Adjunct major honors (12 units)

To graduate with honors, students must also write a senior thesis of high quality as part of the three-quarter sequence SHC 398-1,2,3.

## Minor course requirements (7 units)

In consultation with a faculty adviser, students develop a coherent theme that ties together their choice of seven courses selected from the partial list below. Students must take at least one 300-level seminar. Students applying for the minor in science in human culture must show a minimum of five courses not double-counted in any other major(s).

Some of the themes adopted by students have included medicine and society, technology and social change, science and gender, religion and scientific knowledge, and philosophy of science. For example, students interested in medicine and society might explore the interaction of medical knowledge and practice, medical ethics, and the boundaries between sickness and health. Topics addressed might include the authority of the physician, the role of the hospital, the social dimensions of racial and gender differences, and the changing conception of disease and healing.

# Eligible courses (partial list)

ANTHRO 370 Anthropology in Historical Perspective

BIOL SCI 160 Human Reproduction

CIV ENG 206 Environmental Literacy

CLASSICS 342 Early European Medicine

COMM ST 229 Communication Technology, Community, and Personal Identity

EUR TH 216 The Age of Enlightenment

GEOL SCI 288 Earth in Science and Art

HISTORY 275-1,2 History of Western Science and Medicine

HISTORY 325 History of American Technology

HISTORY 350-3,4 The Intellectual History of Europe

HISTORY 375-1,2 Technology: History, Society, and Economy

HISTORY 376-1,2 Science and Modern Society

PHIL 220 Science in Human Culture

PHIL 254 Scientific Method in the Natural Sciences

PHIL 325 Philosophy of Mind

PHIL 354 Advanced Topics in the Philosophy of Natural Science

PHIL 367 Philosophical Issues Concerning Technology

POLI SCI 204 Politics and Nature

PSYCH 337 Human Sexuality

SOCIOL 312 Social Basis of Environmental Change

SOCIOL 319 Sociology of Science

SOCIOL 355 Medical Sociology

Other courses are available periodically, including HISTORY 391 Special Lectures (e.g., The History of Abortion, The Origins of Modern Medicine) and HISTORY 392 Topics in History seminars (e.g., The Two-Cultures Problem, Gender and Medicine in History).

## Course

SHC 398-1,2,3 Science in Human Culture Senior Seminar

**1.** Studies science in social context. **2,3.** Continuation for students who wish to qualify for honors by writing a senior thesis.

# **Slavic Languages and Literatures**

The department offers a full program of study in Russian language and literature and a range of other courses on the languages, culture, and history of Eastern Europe. Russian study encompasses a broad discipline that touches on many others. The rich heritage of Russia includes much that is fundamental to Western culture. For example, Turgenev, Dostoevsky, Tolstoy, and Chekhov probe philosophical, social, political, and psychological issues that are central to the 20th-century experience. Courses in Russian literature open up the artistry and ideas of this intellectual tradition. Russian language study can also serve as an entrée into other Slavic languages; with a foundation in Russian, one can branch off into related Slavic traditions. At this time, of course, Russian study has obvious practical significance as well.

Nonmajors as well as prospective specialists are served by the department's courses. Many courses offering a general acquaintance with some facet of Slavic studies have no prerequisite. All periods of Russian literature are represented, with emphasis on the 19th and 20th centuries. Russian language at all levels is taught by Americans and native speakers.

Students major in Russian language and literature for a variety of reasons. Some want the rigorous intellectual training and the breadth of cultural exposure. Some students are primarily interested in acquiring language skills for use in government service, international law or trade, journalism, or scientific research. Others use the major as a foundation for graduate work in comparative literature, linguistics, history, or political science. A number of students combine the major in Russian with a second major in one of these fields. Northwestern's library is an excellent resource for undergraduate and graduate study in Russian literature. Qualified advanced students have the opportunity to spend a fall quarter in Russia through a Northwestern study abroad program. Students should consult the department chair or an adviser in the Study Abroad Office to learn more about study abroad options.

# Major in Slavic Languages and Literatures Departmental courses

Basic courses: 102-1,2,3 or equivalent

*Electives:* 14 additional courses in Slavic languages and literatures and related fields

Honors: 2 additional courses

#### **Option A: No Study Abroad**

*Basic electives* (7): 203-1,2,3 and 4 courses chosen from 210-1,2,3; 211-1,2; 255

*Advanced electives (7):* 360 or 361 and 5 other 300- or 400-level Slavic languages and literatures courses; 1 course in a related field chosen with the undergraduate adviser

## **Option B: Study in Russia**

*Basic electives (4):* 4 courses chosen from 210-1,2,3; 211-1,2; 255

*Study abroad:* 4 or more units toward the major *Advanced electives (6):* 360 or 361 and 5 other 300or 400-level Slavic languages and literatures courses

# Minor Concentrations in Slavic Languages and Literatures

The department offers minor concentrations in Russian and Slavic studies.

#### Russian

The minor concentration in Russian is particularly suitable for students who wish to study the Russian language intensively (possibly for use in such fields as political science, international relations, law, or business) or for the increasing number of students of Russian background at Northwestern who major in other fields but wish to broaden their knowledge of their native language.

**Prerequisites:** completion of two years of college-level language or equivalent as demonstrated by course work such as 102-3 or equivalent

# Minor course requirements (7 units)

• 203-1,2,3

• 4 courses chosen from 303-1,2,3, 359-1,2, 360, 361

## Slavic Studies

The minor concentration in Slavic studies offers a broad survey of literature and culture but does not include a sequence of language courses. The 200-level offerings provide a background in literature and culture, and the 300-level courses offer the opportunity to deal with more specific issues.

## Minor course requirements (8 units)

• 4 200-level courses in Slavic languages and literatures

• 4 300-level courses, at least 2 of them in Slavic languages and literatures; up to 2 may be courses in a related field chosen with consent of the undergraduate adviser (HISTORY 345 is strongly recommended)

# Honors in Slavic Languages and Literatures

The honors program in Slavic languages and literatures gives outstanding senior majors an opportunity to undertake a research project under the supervision of a faculty adviser. This honors thesis, together with the student's record in Slavic courses, forms the basis for faculty decisions on the award of departmental honors. Most honors candidates research and write the thesis in two quarters of 399. Another option is to take a 400-level seminar followed by 399 in which the student pursues a topic arising out of the 400-level course. Students interested in pursuing honors should consult the director of undergraduate studies by the end of their junior year. See also Honors under Academic Policies earlier in this section of the catalog.

# Courses in Language and Linguistics SLAVIC 101-1,2,3 Elementary Russian

**1.** Largely oral approach to the basic grammar and vocabulary necessary for reading, speaking, and writing simple Russian. **2,3.** Graded readings, conversation, writing.

**SLAVIC 102-1,2,3 Intermediate Russian** Language of conversation, literature, and today's posters and newspapers. Weekly language lab; unabridged poetry and fiction; tapes and films. Prerequisite: 101-3 or equivalent.

**SLAVIC 106-1,2,3 Elementary Czech** Largely oral approach to the basic grammar and vocabulary necessary for reading, speaking, and writing simple Czech.

**SLAVIC 108-1,2,3 Elementary Polish** Basics of spoken, written, and literary Polish.

## SLAVIC 203-1,2,3 Russian Language and Culture

Conversation, listening comprehension, reading, and composition. Unabridged contemporary readings on Russian culture and society. Third-year, multiskill course. Prerequisite: 102-3 or equivalent.

**SLAVIC 206-1,2,3 Intermediate Czech: Language and Culture** Continuation of 106; reading on topics in Czech culture. Prerequisite: 106-3.

**SLAVIC 208-1,2,3 Intermediate Polish: Language and Culture** Continuation of 108; reading on topics in Polish culture. Prerequisite: 108-3 or consent of instructor.

**SLAVIC 303-1,2,3 Advanced Russian Language and Culture** Conversation, listening comprehension, reading, and composition. Unabridged contemporary reading and media, including television, on Russian culture and society. Fourth-year course. Prerequisite: 203-3 or equivalent.

# **SLAVIC 304-1,2,3 Russians: New and Old Values** Advanced Russian with stress on oral and aural comprehension and writing; documentary films, newspaper and magazine articles in Russian. Prerequisite: 303-3 or equivalent.

**SLAVIC 320-0 Structure of Serbian and Croatian** Phonological and syntactic structure of Serbian and Croatian. Historical background.

**SLAVIC 340-0 History of the Russian Language** Russian phonology and morphology from Proto-Indo-European to modern Russian. Effects of the changes on the contemporary language.

**SLAVIC 341-0 Structure of Modern Russian** Theories and methods of linguistics as applied to the description of modern Russian. Phonetics, morphology, syntax.

**SLAVIC 358-1,2 Language in Polish Literature** Courses designed for students who already speak Polish but have problems with stylistics and more complex grammatical structures, and/or wish to improve their knowledge of and abilities in Polish. Students will become familiar with major achievements of Polish artistic prose in the 20th century.

# Courses with Reading and Discussion in English SLAVIC 210-1,2,3 Introduction to Russian Literature

Comprehensive overview of the central prose works and literary movements in 19th-century Russia. **1**. Thematic and formal study of major works by Pushkin, Gogol, Lermontov, Turgenev. **2**. Tolstoy, Dostoevsky. **3**. Turgenev, Leskov, the late Tolstoy, Chekhov, Bunin, Gorky.

**SLAVIC 211-1,2 20th-Century Russian Literature** Major works in cultural-historical context, from the revolutions of 1917 through the present. **1.** Russian modernism in literature, music, film, and visual art. **2.** Masterpieces of 20th-century Russian prose, including works by Babel, Bulgakov, Pasternak, Solzhenitsyn, and contemporary Russian fiction writers.

**SLAVIC 255-0 Early Slavic Civilization** History, literature, and culture of the Slavs (Bulgarians, Macedonians, Serbs, Croats, Russians, Ukrainians, Byelorussians, Poles, Czechs, Slovaks) from antiquity through the 13th century.

**SLAVIC 257-0 Introduction to the Soviet Union and Successor States** Broad survey of Russian cultural, social, political, and economic life in the 20th century. Focus on the Soviet period and its aftermath in light of Russia's historical background.

# SLAVIC 261-0 Polish Culture in the 20th Century

Study of key developments in Polish history, literature, and thought by way of texts drawn from literature, history, politics, journalism, memoirs, essays, and film. Poland as a microcosm for recent European history and culture.

**SLAVIC 267-0 Czech Culture: Film, Visual Arts, Music** Cultural legacy of the Czech nation as represented in various media.

**SLAVIC 310-0 Tolstoy** Tolstoy's artistic and intellectual development through his major fiction.

**SLAVIC 311-0 Dostoevsky** Dostoevsky's artistic and intellectual position in Russian literature as revealed in the major novels, shorter fiction, and diaries.

**SLAVIC 313-0 Nabokov** Vladimir Nabokov's major Russian and American prose, from his émigré years (*The Defense*, *The Gift*, and *Invitation to a Beheading*) to his celebrated English-language works (*Lolita, Speak Memory*, and *Pale Fire*).

**SLAVIC 318-0 19th-Century Russian Comedy and Satire** The nature of comedy, the types of satire, and the functions of laughter in the works of Gogol and Chekhov.

**SLAVIC 319-0 The Philosophical Story** A key form of Russian and East European fiction, the story about abstract philosophical issues; its role in general philosophical debates, how it works as literature, philosophical issues raised.

**SLAVIC 350-0 Folklore, Music, Poetry** Traditional folk and religious folklore and poetry: from Biblical and Greek origins through East Slavic, Russian, and Western European works. Forms, literary and political implications, Russian and Western European poetic and rhythmic interrelations.

SLAVIC 367-1,2 Russian Film Development of Russian film and film theory from the silent era to the 1980s.
1. Golden Age of Russian cinema (Eisenstein, Pudovkin, Vertov, Protazanov, Vasiliev brothers, Dovzhenko, socialist realism).
2. Russian film since World War II (more socialist realism, neorealism, Tarkovsky, Mikhalkov, Paradjanov, Abuladze; criticism and semiotic theory).

**SLAVIC 368-0 Andrei Tarkovsky's Aesthetics and World Cinema** Major films of Tarkovsky and of Russian and non-Russian directors whose work is related to his (Eisenstein, Wenders, Bergman, Kurosawa).

## SLAVIC 369-0 20th-Century Russian Drama and Theater

Modernist dramatic and theatrical traditions of Russia from the rise of the Moscow Art Theater to the advent of Socialist Realism. Dramas by Chekhov, Blok, Khlebnikov, Mayakovsky; productions of Stanislavsky, Diaghilev, Meierkhold; design innovations of Tatlin, Malevich, Exter.

**SLAVIC 372-0 Introduction to Eastern European Jewish Culture** Cultural heritage of Russian and Eastern European Jewish communities from the 18th to 20th centuries. Works of Sholom Aleichem and Isaac Bashevis Singer; relations of Jewish culture to surrounding European cultures.

# SLAVIC 375-0 Eastern European Literature of the

**Holocaust** Novels, short stories, and memoirs by Eastern Europeans who experienced the Nazi occupation or were marked by its aftermath; problems of identity, memory, genre.

## **SLAVIC 377-0 Theory and Practice of Literary**

**Translation** Theoretical and practical problems of literary and cultural translation. Prerequisites: 300-level proficiency in a Romance, Germanic, or Slavic language; consent of instructor.

# **SLAVIC 378-0 Visual Art in the Context of Russian Culture** Survey of major trends in Russian visual art in the dual contexts of Russian culture and European visual art. Works integrated with readings drawn from Russian literature and history.

**SLAVIC 390-0 Literature and Politics in Russia** More than in any other European tradition, Russian literature has played a central role in defining the nation's political agenda. The interaction of literature with Russian cultural and political history.

**SLAVIC 391-0 The Rise and Fall of Yugoslavia** Yugoslavia from origins as a dream to existence as a multinational state and collapse in the late 1980s; nationalism, interrelationship of politics and culture; readings from historians, cultural critics, and literary works.

# **SLAVIC 392-0 Contemporary East European Literature** Post–World War II literature of the Czech Republic, Hungary, Poland, Romania, and the former Yugoslavia; national identity, dissidence, and literary postmodernism.

## **Courses in Literature with Prerequisite in Russian**

Unless otherwise indicated, the prerequisite for 300-level courses is 203-3 or equivalent.

**SLAVIC 359-1,2 Russian Prose** Selected works of Russian masters. **1**. 19th century. **2**. 20th century. Content varies; may be repeated for credit. All reading in Russian. Pre-requisite: 102-3 or equivalent.

## **SLAVIC 360-0 Survey of 19th-Century Russian Poetry** Introduction to the wealth of Russian 19th-century

lyric poetry and basic techniques for its study: Pushkin, Baratynsky, Lermontov, Tyutchev, Fet.

## SLAVIC 361-0 Survey of 20th-Century Russian Poetry

Introduction to the major currents of Russian 20th-century lyric poetry and basic techniques for its study: Blok, Mayakovsky, Khlebnikov, Akhmatova, Tsvetaeva, Mandelshtam, Pasternak, Brodsky.

**SLAVIC 398-0 Senior Honors Seminar** Topics vary yearly. **SLAVIC 399-0 Independent Study** For Russian majors selected by the department as candidates for departmental honors and for other advanced students with consent of instructor.

# Sociology

The Department of Sociology offers preparation for students who want to pursue careers in social research, social policy applications, and teaching. It provides an excellent background for all professions involved in the major structures of modern society, such as business, public administration, law, medicine, journalism, and planning. The department also emphasizes the sociological perspective as a fundamental part of a liberal education and a discipline for developing a humane understanding of the world.

The department is particularly strong in the areas of urban studies, comparative historical sociology, the sociology of art and culture, deviance and social control, organizations, and the sociology of law, education, and science. The department offers a wide variety of approaches to fundamental issues of social inequality, its origins and consequences, including class and economic domination, race, ethnicity, and gender. Unusually good opportunities are available for independent study, field internships, and the use of qualitative historical and comparative methods of research. In addition to the courses listed below, the department offers quarterly seminars on special topics of interest.

# Major in Sociology

**Departmental courses:** 1 sociology quarter-course at the 100 or 200 level (except 226) and 9 additional quarter-courses, distributed as follows:

- 3 courses in methods of social research: 226, 303, 329 (226 should be taken by the sophomore year; 303 and 329 in the junior year)
- 306 (junior or senior year)
- 398-1,2 (fall and winter quarters of the senior year)
- 4 additional 300-level sociology courses; only 1 unit each of 376, 399, and GEN LA 393 Chicago Field Studies Internship may be used to fulfill this requirement

In certain cases, students who are combining a major in sociology with a major in another field that also requires a senior research seminar may arrange to fulfill their seminar requirement in a combined project.

**Related courses:** 4 300-level quarter-courses in African American studies, anthropology, economics, history, linguistics, philosophy, political science, psychology, or women's studies selected with the approval of the adviser.

## Minor Concentrations in Sociology

The Department of Sociology offers minor concentrations in sociological research and in sociological studies. Students seeking a minor in sociology must consult with the director of undergraduate studies.

# Sociological Research

The minor concentration in sociological research prepares students to carry out their own research by offering an introduction to the discipline, followed by an array of courses in quantitative and qualitative methods. Students learn how data are gathered and prepared for analysis and a variety of techniques and methods for presenting information, arguments, and conclusions. Two 300-level courses allow students to see how these methods are used in practice.

# Minor course requirements (6 units)

- 110 or a 200-level sociology course
- 226
- 303 or equivalent
- 329
- 2 300-level sociology courses approved by the director of undergraduate studies; although they may be taken more than once, only 1 credit may be counted toward the minor for each of the following courses: 376, 399, GEN LA 393 Chicago Field Studies Internship

## Sociological Studies

The minor concentration in sociological studies introduces basic information about the social world and provides the rudimentary tools to understand it. It prepares students to compare, evaluate, and critically analyze information about various institutions, processes of stratification, and social change.

#### Minor course requirements (7 units)

- 110 or a 200-level sociology course
- 226
- 5 300-level sociology courses approved by the director of undergraduate studies; although they may be taken more than once, only 1 credit may be counted toward the minor for each of the following courses: 376, 399, GEN LA 393 Chicago Field Studies Internship

## Four-Year BA/MA

In rare instances, superior students may petition the department to complete BA and MA degrees in the normal fouryear period required for the BA. Only unusually gifted and motivated students are accepted into this rigorous program. Interested students should consult with the undergraduate advisers early in their academic careers. See Four-Year Master's Programs in the Undergraduate Education section of this catalog.

# **Honors in Sociology**

Students who complete all requirements for the major, maintain a grade point average of 3.3 or above in their major courses, and complete an outstanding senior research project in 398-1,2 or its equivalent will be nominated for honors in sociology to the College Committee on Superior Students and Honors, which has final authority to grant the honors degree. For more information, consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

## The Teaching of Sociology

Weinberg College students pursuing a major in sociology who also wish to be certified for secondary teaching of sociology with history must be admitted to the Secondary Teaching Program in the School of Education and Social Policy (SESP) and complete all requirements as outlined in the SESP section of this catalog. Students are urged to contact the Office of Student Affairs in SESP at the earliest opportunity.

## **Courses Primarily for Undergraduates**

**SOCIOL 110-0 Introduction to Sociology** Essential characteristics of group life. Interrelations of society, culture, and personality. Basic institutions and processes.

**SOCIOL 201-0 Social Inequality: Race, Class, and Power** Origins and functions of stratification. Class, prestige, and esteem. Interaction of racial and cultural groups in various settings. Black-white relationships in the United States.

**SOCIOL 202-0 Social Problems: Norms and Deviance** How issues emerge. Rules, rule enforcers, rule breakers; advocates, opponents, and victims of problems. Blame, help, and entitlement. Current problems and systemic contradictions.

**SOCIOL 203-0 Revolutions and Social Change** Causes and outcomes of large-scale social change. Role of violence and revolution in the development of the modern world.

**SOCIOL 204-0 Social Interaction: The Individual and Society** Development of individual attitudes and behavior patterns through social interaction. Relation to students' everyday life and problems.

**SOCIOL 205-0 American Society** How American society works as a whole. How major institutions relate and affect each other and how the different segments and strata of society experience such institutional processes. Tensions associated with differential experience of common and shared institutions.

**SOCIOL 206-0 Law and Society** Introduction to the role of law in American society. Relationship of law, inequality, and social change. Patterns of change in major legal institutions: the courts, the legal profession, and legal services for the poor.

**SOCIOL 207-0 Problems of Cities** Problems of American urban communities and possible solutions. Spatial,

economic, and political trends; private and public decision making; class, race, and family needs. Consequences for adequate public services.

**SOCIOL 215-0 Economy and Society** Introduction to sociological approaches to economic life. Topics include property rights, illegal markets, money, economic inequalities, direct sales, and boycotts.

**SOCIOL 216-0 Gender and Society** Social determination of gender-appropriate behavior. Origins, values, and effects of sex-role stereotypes. How stereotypes fit social reality. Socialization (childhood and adult), values, economic opportunities in the United States, now and in the past.

**SOCIOL 226-0 Sociological Analysis** Logic and methods of social research, qualitative and quantitative analysis of social data, and ethical, political, and policy issues in social research. Foundation for further work in social research.

# SOCIOL 301-0 The City: Urbanization and Urbanism

Theories of urbanization, housing, jobs, race and class, segregation, social networks, politics, and reform policies. Research projects. Prerequisite: 110 or 207.

**SOCIOL 302-0 Sociology of Organizations** Structure and function of formal organizations, especially in business and government. Stratification, social control, and conflict. Discretion, rules, and information in achieving goals. Modes of participation. Development of informal norms. Prerequisite: 100- or 200-level course.

**SOCIOL 303-0 Analysis and Interpretation of Social Data** Introduction to quantitative methods: the interpretation of descriptive statistics, relationships between variables, and the logic of inferential statistics. Prerequisite: 226 or consent of instructor.

## **SOCIOL 305-0 Demography and Population Problems** Social causes and consequences of population dynamics

(fertility, mortality, marriage, divorce, and migration) and population structures (age, sex, size, density). Possible roles of population changes in environmental and economic development problems. Prerequisite: 100- or 200-level course.

**SOCIOL 306-0 Sociological Theory** Sociological perspective as developed by classic theorists. Elucidation and testing of sociological principles in contemporary research. Primarily for sociology majors. Open to others with consent of instructor. Prerequisite: 226.

**SOCIOL 307-0 School and Society** Reciprocal influences between formal institutions of education and the broader society from different theoretical perspectives. Internal organization of schools. Relationship between education and inequality and to problems of contemporary urban education. Prerequisite: 100- or 200-level course.

**SOCIOL 308-0 Sociology of Deviance and Crime** The social organization of crime and other misdeeds, explanations of crime and deviance, creating criminal law, policing, detection and investigation, prosecution, plea bargaining,

the courts, sentencing, punishment, prisons, and alternatives to criminal law. Prerequisite: 110 or 202.

**SOCIOL 309-0 Political Sociology** Selected topics in political economy and sociology: revolutions, the development of the modern state, third world development, international conflict. Prerequisite: 100- or 200-level course.

**SOCIOL 310-0 The Family and Social Learning** Influence of socioeconomic and other structural and cultural resources and constraints on family structure and dynamics. Historical and comparative perspectives on the modern family. Prerequisite: 100- or 200-level course.

# **SOCIOL 312-0 Social Basis of Environmental Change** The role of production structures and other social institu-

tions on pollution and depletion. Social support for and resistance to environmental protection policies. Inequalities in use of resources and incidence of environmental hazards. Prerequisite: 100- or 200-level course.

**SOCIOL 314-0 Sociology of Religion and Ideology** Belief systems in society. Production of ideas. Religion, art, science, political ideology, and folk-knowledge as social products. Prerequisite: 100- or 200-level course.

## SOCIOL 315-0 Industrialism and Industrialization

Structure and culture of modern industry; consequences for status and class organization. Labor force, formal and informal organization of management and labor. Unionmanagement interaction. Factors affecting industrial morale. Prerequisite: 100- or 200-level course.

**SOCIOL 316-0 Economic Sociology** Sociological approach to production, distribution, consumption, and markets. Classic and contemporary approaches to the economy compared across social science disciplines. Prerequisite: 215 or ECON 202 or equivalent.

**SOCIOL 318-0 Sociology of Law** Sociological analysis of legal institutions such as courts, the police, and lawyers. Law, inequality, and social change. Prerequisite: 110 or 206.

**SOCIOL 319-0 Sociology of Science** Science as a social system. Personality, social class, and cultural factors in scientific development, creativity, choice of role, simultaneous invention, and priority disputes. Social effects on objectivity and bias.

**SOCIOL 321-0 Armed Forces and Society** Contemporary military institutions and sociological theory. Dynamics of combat, peacekeeping, race relations, gender, and other social issues. Prerequisite: 100- or 200-level course.

**SOCIOL 323-0 American Subcultures and Ethnic Groups** Differentiation, organization, and stratification by ethnicity, race, lifestyle, and other traits. Maintenance of subgroup boundaries and distinctiveness. Consequences of difference: identity, political and economic participation, group solidarity. Prerequisite: 100- or 200-level course.

**SOCIOL 325-0 Social Stratification** Bases of social stratification. Effects on life conditions and social organization. Theoretical, methodological, and empirical dimensions.

Emphasis on advanced industrial societies. Prerequisite: 226.

**SOCIOL 327-0 Youth and Society** How young people interact with families, schools, peers, neighborhoods, and workplaces, influencing them and being influenced by them. Prerequisite: 100- or 200-level course.

# **SOCIOL 329-0 Field Research and Methods of Data Collection** Practicum in firsthand data collection using observation and structured and unstructured interviewing. Issues of reliability and validity, and qualitative analysis. Prerequisite: 226.

**SOCIOL 331-0 Markets, Hierarchies, and Democracies** The forms and social structures for making economic decisions in modern societies. Prerequisite: 100- or 200level course.

#### SOCIOL 332-0 Work and Occupation in Modern

**Industrialized Societies** Sociological perspectives on work. Students view their own occupational futures in the context of the changing social relations of production. Prerequisite: 100- or 200-level course.

**SOCIOL 333-0 Law, Norms, and Power** How laws and informal social rules are related to the exercise of power by some people over others. Prerequisite: 100- or 200-level course.

## SOCIOL 335-0 Sociology of Rational Decision Making

Analysis of the role played by numerical and quantitative information in organizational decision making in the private and public sectors. Prerequisites: 215 and 302 or ECON 202 or consent of instructor.

**SOCIOL 345-0 Class and Culture** The role that culture plays in the formation and reproduction of social classes. Class socialization, culture and class boundaries, class identities and class consciousness, culture and class action. Prerequisite: 100- or 200-level course.

**SOCIOL 347-0 Sociology of Time and Space** Social construction of time and space. Standardization of time, maps as ideological documents, capitalist time and space, personal and social spaces and memories. Prerequisite: 100- or 200-level course.

**SOCIOL 350-0 Sociology of the Arts** Art as collective activity. Conventions in art and aesthetics. Professionals and audiences and other aspects of culture. Prerequisite: 100- or 200-level course.

**SOCIOL 355-0 Medical Sociology** Social construction of health and illness; inequalities in distribution of illness and health care; organization of health care work and occupations. Prerequisite: 100- or 200-level course.

**SOCIOL 356-0 Sociology of Gender** Gender and issues of social reproduction and social change with sexuality and reproduction emphasized. Prerequisite: 216 or 226.

**SOCIOL 376-0 Topics in Sociological Analysis** Advanced work on special topics in sociological study.

**SOCIOL 380-7 Junior Year Tutorial** Small seminar group in conjunction with various scheduled 300-level classes.

**GEN LA 393-0 Chicago Field Studies Internship** See General Studies.

**SOCIOL 398-1,2 Senior Research Seminar** Independent research projects carried out under faculty supervision. Prerequisite: 303, 329, or equivalent.

**SOCIOL 399-0 Independent Study** (1 or 2 units) Open with consent of department. Students may re-enroll for consecutive quarters.

## Spanish

See Hispanic Studies.

## **Statistics**

Statistics is the scientific discipline that deals with the organization, analysis, collection, and interpretation of numerical data. Statistical methods are widely used to design and analyze experiments, sample surveys, censuses, and other observational programs. Such analysis involves both description of the properties of groups of observations and problems of drawing inferences from such data. Applications to the biological, social, and physical sciences are widespread, and statistical analyses are increasingly required in actuarial work, accounting, finance, engineering, medicine, and law.

# **Major in Statistics**

# Departmental courses

- MATH 330-1 or IEMS 202
- STAT 320-1,2 or IEMS 303 and 304
- STAT 325, 350, 351
- 2 of the following courses: MATH 330-2, IEMS 305, 315, STAT 352, 355, 359. (Students may not apply both MATH 330-2 and IEMS 315 to the major requirement.)

**Related courses:** MATH 214-1,2,3, 215, 217, 290-1,2,3, or equivalent

### **Minor in Statistics**

Students who complete the minor in statistics receive serious exposure to probability theory, statistical estimation theory, statistical analysis, and the design of statistical data collection. Students choosing to minor in statistics are assumed to have completed MATH 214-1,2,3 or equivalent.

## Minor course requirements (6 units)

- STAT 201, 202, or 210 (1 unit)
- MATH 330-1 or IEMS 202 (1 unit)
- IEMS 303 and 304 (2 units)
- STAT 350 or ECON 381-2 (1 unit)
- STAT 325 or 351 (1 unit)

# Four-Year BA/MS

The department offers a four-year BA/MS program in statistics for outstanding undergraduate majors. Interested students should contact their adviser or department chair and should see Four-Year Master's Programs in the Undergraduate Education section of this catalog.

#### **Honors in Statistics**

Departmental majors with outstanding records both overall and within the department may apply for graduation with departmental honors. A departmental recommendation for honors requires that students take two quarters of 398, through which a research paper is developed. For more information, consult the director of undergraduate studies. See also Honors under Academic Policies earlier in this section of the catalog.

## **Courses Primarily for Undergraduates**

**STAT 201-0 Statistics and Public Policy** Basic statistical concepts and techniques introduced via case studies of interesting public policy issues. The cases illustrate methods of data collection and analysis.

**STAT 202-0 Introduction to Statistics** Data collection, summarization, correlation, regression, probability, sampling, estimation, tests of significance. Does not require calculus and makes minimal use of mathematics.

**STAT 206-0 Elementary Statistics for Research** Design of experiments, descriptive statistics, correlation and regression, probability, confidence intervals, and significance testing.

**STAT 210-0 Introductory Statistics for the Social Sciences** Introduction to basic concepts and methods of statistics and probability. Methods of data collection, descriptive statistics, probability, estimation, sampling distributions, confidence intervals, hypothesis testing.

**STAT 302-0 Elementary Statistical Methods** Tabular and graphical presentation of data, hypothesis tests, confidence intervals, comparisons of means and proportions, regression and correlation. Prerequisite: MATH 214-2 or equivalent.

**STAT 320-0-1,2 Statistical Methods 1.** Distribution functions, densities, measurement of location and scale, random sampling, random variables, sampling statistics, hypothesis tests, confidence intervals, parameter estimation, and non-parametric methods. **2.** Correlation and regression, contingency tables, analysis of variance, design and analysis of experiments. Prerequisite: MATH 330-1 or IEMS 202.

**STAT 325-0 Survey Sampling** Probability sampling, simple random sampling, error estimation, sample size, stratification, systematic sampling, replication methods, ratio and regression estimation, cluster sampling. Prerequisites: two quarters of statistics or consent of instructor.

STAT 330-1,2 Applied Statistics for Research 1. Design of experiments and surveys, numerical and graphical summaries of data, correlation and regression, confidence intervals and tests of significance, one- and two-sample problems. Prerequisite: MATH 214-2 or equivalent.
Simple linear regression, inference, diagnostics, multiple

regression, diagnostics, autocorrelation, one-way ANOVA, power and sample size determination, two-way ANOVA, ANCOVA, randomized block designs. Prerequisite: 330-1.

**STAT 338-0 History of Statistics** Historical survey of the development of modern statistics, from Bernoulli's law of large numbers to the contributions of R. A. Fisher. Prerequisite: IEMS 304 or equivalent.

**STAT 344-0 Statistical Computing** Exploration of the theoretical and practical problems in the development and use of statistical computing systems for numerical and graphical analysis of data. Prerequisite: two quarter-courses of STAT 350, 351, PSYCH 351, IEMS 304, MATH 217, or equivalent.

**STAT 345-0 Statistical Demography** Self-contained introduction to statistical theory of demographic rates (births, deaths, migration) in multistate setting; statistical models underlying formal demography; analysis of error in demographic forecasting. Prerequisite: MATH 217, STAT 350, or equivalent.

**STAT 350-0 Regression Analysis** Simple linear regression and correlation, multiple regression, residual analysis, selection of subsets of variables, multicollinearity and shrinkage estimation, nonlinear regression. Prerequisite: IEMS 304 or equivalent.

**STAT 351-0 Design and Analysis of Experiments** Methods of designing experiments and analyzing data obtained from them: one-way and two-way layouts, incomplete block designs, factorial designs, random effects, split-plot and nested designs. Prerequisite: IEMS 304 or equivalent.

**STAT 352-0 Nonparametric Statistical Methods** Survey of nonparametric methods, with emphasis on understanding their application. Prerequisite: IEMS 304 or equivalent.

**STAT 355-0 Analysis of Qualitative Data** Introduction to the analysis of qualitative data. Measures of association, log-linear models, logits, and probits. Prerequisite: IEMS 304 or equivalent.

**STAT 359-0 Topics in Statistics** Topics in theoretical and applied statistics to be chosen by instructor. Prerequisite: consent of instructor.

STAT 398-0 Undergraduate Seminar

# **Related Courses in Other Departments**

MATH 330-1,2,3 Probability and Statistics IEMS 202 Probability IEMS 305 Statistical Methods for Quality Improvement IEMS 315 Stochastic Models and Simulation

## Undergraduate Leadership Program

The Undergraduate Leadership Program, a certificate program open to all undergraduates, helps students understand the nature of leadership and prepares them to become leaders. (See Undergraduate Leadership Program in the Other Undergraduate Programs section of this catalog.)

# **Urban Studies Program**

The Program in Urban Studies enables students majoring in anthropology, economics, history, political science, or sociology to master their disciplinary major and to complement it with a second major in urban studies. With special consent of the director of the program, students with other majors in Weinberg College also may elect urban studies as a second major. The purpose of the program is to introduce students to an interdisciplinary perspective on the city and its problems, bringing together faculty and students who share common interests but have different academic backgrounds. In addition to the following requirements, it is recommended that students who major in urban studies complete a methods or statistics course in one of the social science departments and participate in the Chicago field studies program.

## **Major in Urban Studies**

Program courses

- Fulfillment of the major requirements in any one of the following undergraduate departments: anthropology, economics, history, political science, sociology; or with consent of the director of the program, fulfillment of the major requirements in another department of Weinberg College. Majors in urban studies must show a minimum of 7 courses not double-counted in any other major(s). Of the courses that are double-counted, 1 may be counted in the the core requirement; another may be counted as an elective.
- Completion of 4 courses chosen from an urban studies core: ECON 354; HISTORY 322-1,2; POLI SCI 221; SOCIOL 207, 301
- Completion of 3 additional courses chosen from the following list, no more than 2 from the same department and no more than 1 from urban field studies or internships: AF AM ST 236-2; ART HIST 379; CIV ENG 371; ECON 337, 354, 355; HISTORY 322-1,2; POLI SCI 221, 327, 330; SOCIOL 207, 301; any approved unit of urban field studies in any relevant department
- Completion of the two-unit 398 seminar during the fall and winter or winter and spring quarters of the student's senior year. Check *Class Schedule* for quarters this seminar is offered.

## Course

**URBAN ST 398-1,2 Urban Studies Seminar** Open to senior majors in urban studies. Interdisciplinary approach to urban studies entailing design and execution of a research project over two quarters. Grade of K given in 398-1 changed to letter grade after completion of 398-2.

# Writing Program

The Writing Program is an independent Weinberg College unit that seeks to help all Northwestern undergraduates learn to write clearly and persuasively. A core faculty of experienced writing instructors teaches the program's main sequence of basic, intermediate, and advanced expository writing courses. These are listed as ENGLISH 105, 106, 205, and 305. Writing courses are limited to 15 students, allowing instructors to comment extensively on students' writing and to meet regularly with students in individual conferences. Courses at every level emphasize revision, with the goal of strengthening each student's ability to think clearly, analyze carefully, argue convincingly, and communicate effectively.

The Writing Program also operates the Writing Place, a center that provides free composition tutoring and consulting for all Northwestern students. The Writing Place, located in University Library, is open most mornings, afternoons, and evenings during the academic year. Students may make appointments, use the schedule of drop-in hours, or interact with Writing Place tutors through the campus computer network.

The Writing Program helps to oversee writing requirements — and thus provides writing advising — for undergraduates in Weinberg College, McCormick School of Engineering and Applied Science, and the School of Music. Members of the Writing Program faculty also occasionally teach specialized courses and workshops. In addition, in recent years the Writing Program has collaborated extensively with other University programs and departments, developing new ways to integrate writing instruction with instruction in other disciplines. In all its courses and special offerings, the Writing Program concentrates on helping students develop skill, confidence, and insight as writers.

Students interested in a writing major should see English Major in Writing in the English section.

# Courses

**ENGLISH 105-0 Expository Writing** See English. **ENGLISH 106-1,2 Writing in Special Contexts** See English.

ENGLISH 205-0 Intermediate Composition See English. ENGLISH 304-0 Practical Rhetoric See English. ENGLISH 305-0 Advanced Composition See English

# School of Education and Social Policy

The mission of the School of Education and Social Policy (SESP) is to understand and improve learning communities, defined as groups of people working together in structured social and/or technical environments that influence human development. Viewed in this way, learning communities include not only schools and classrooms but also workplaces, families, neighborhoods, and other societal arrangements in which learning takes place. Through their broadbased interdisciplinary research, teaching, and outreach activities, SESP faculty strive to better understand how social, psychological, and economic factors shape human development and learning and how innovations in pedagogy, technology, and social policies can benefit human lives.

At the undergraduate level, the school provides preprofessional training and research activities that are closely linked to SESP's faculty and to the graduate programs in Learning Sciences and in Human Development and Social Policy. Students learn to understand human development and improve learning in its various social contexts by applying the social and behavioral sciences. The school offers four programs leading to the degree of bachelor of science in education and social policy: Human Development and Psychological Services, Learning and Organizational Change, Secondary Teaching, and Social Policy. Students in other undergraduate schools also may complete the requirements of the Secondary Teaching Program and qualify for secondary certification.

Individuals who hold a baccalaureate degree may apply to the school's master of science program, which leads to elementary or secondary teaching certification in the state of Illinois.

For more information about SESP, see the school's Web site at www.sesp.northwestern.edu.

# Academic Policies

# Requirements for the Degree of Bachelor of Science in Education and Social Policy

The following requirements concerning residence and grade point average apply to all students seeking the degree of bachelor of science in education and social policy:

1. A minimum of 45 course units are required for graduation from the School of Education and Social Policy.

2. Students are required to maintain a minimum grade point average of 2.0 in all work presented for the degree. To qualify for teacher certification, students must earn a grade of A, B, or C and an overall average of 2.5 in all required core courses and all courses used to complete their teaching major. Students in the Human Development and Psychological Services, Learning and Organizational Change, and Social Policy Programs must earn a grade of A, B, or C in all their core and program courses. The minimum allowable grade for distribution requirements in all programs is C-.

3. Full-time students in the School of Education and Social Policy may elect to enroll in some courses with the understanding that they will not receive a regular letter grade but the notation P (pass) or N (no credit). They may elect one course per quarter under this option but not any course in their core, program, or teaching major.

4. Not more than nine (or one-fifth) of the grades in courses taken at Northwestern and presented for graduation may be a combination of P's and D's: of these nine grades, no more than six may be P's.

5. Any work taken at universities other than Northwestern that is to be counted toward fulfilling Northwestern requirements must be approved in advance by the student's adviser and the assistant dean.

6. Every candidate for a degree must file an application for the degree, along with a Course Planning Form, in the SESP Office of Student Affairs one year in advance of the date of graduation (see Academic Calendar). That office will forward the application, when approved, to the Registrar's Office.

7. Students who wish to transfer into SESP's Secondary Teaching Program may not be able to meet the requirements unless they plan carefully throughout their undergraduate program.

8. Students who wish to transfer into SESP mustmeet all program requirements expected of students in SESP

• possess a minimum cumulative GPA of 2.5

• demonstrate an understanding of how transferring to SESP will support their academic goals

9. Students transferring from another university are required to complete the last 23 course units at Northwestern University.

10. Students must complete a 10-week practicum that includes 30 hours per week at a supervised practicum site (SESP 383) and a concurrent seminar (SESP 385) analyzing the practicum experiences. Students receive four credits upon completion of these requirements.

11. Additional requirements are stipulated in the SESP *Undergraduate Handbook*. All students are expected to be familiar with and observe these policies.

In addition to and independent of the requirements set by SESP, all students must satisfy the Undergraduate Residence Requirement (see Undergraduate Education section of this catalog).

## Honors

Students who maintain records of academic distinction may qualify for the honors program. Any student who has attained an overall cumulative grade point average of 3.5 or above after winter quarter of the junior year is eligible for the program following completion of that year. Students selected for the program work with a faculty adviser on an honors project during the senior year. The three-quarter program begins with registration for SESP 398 Honors Thesis with the honors project adviser. If progress is satisfactory, students are then eligible to register for 398 during winter and spring quarters of the senior year. Grades are based on performance throughout the project and on readers' evaluations of the project report. Additional information about the honors program is available from the honors program coordinator.

## Undergraduate Research

SESP provides a variety of in-depth research and innovative learning opportunities for undergraduates, including SESP 298 Student-Organized Seminar, 390 Research Apprenticeship, and 399 Independent Study. Additional information about undergraduate research opportunities in SESP and faculty research projects may be obtained through the academic advisers in the SESP Office of Student Affairs.

## Probation

In addition to the University regulations regarding academic probation, an undergraduate student in SESP is ordinarily placed on academic probation when, in any one quarter, that student does not receive at least three final grades of A, B, C, or P or has a cumulative grade point average below 2.0. Students on probation must work with their advisers to address the deficiencies that resulted in probation. Failure to do so may result in dismissal from the University.

## **Academic Advisers**

Each undergraduate student is assigned to an adviser in the Office of Student Affairs. For the advising system to work effectively, the student must take all academic questions to the adviser. The adviser is responsible for helping to plan the academic program to meet the requirements for completion and graduation. Advisers also help students access academic, professional, and personal development resources. Students consult with faculty as well about research and professional interests.

Students are required to meet with their advisers at least once per quarter. Failure to do so may result in a hold being placed on a student's registration.

## Petitions

Students must petition if they wish to be exempted from any of the regular degree requirements of SESP. Petition forms may be obtained from the SESP Office of Student Affairs. No petition is considered unless it is signed by the student's adviser and the SESP assistant dean for student affairs.

# **Academic Programs**

# **Requirements for the Bachelor's Degree**

Students in the Human Development and Psychological Services, Learning and Organizational Change, Secondary Teaching, and Social Policy Programs receive a bachelor of science degree in education and social policy; 45 units are required for the degree.

The intellectual core of the Learning and Organizational Change and Secondary Teaching Programs comes from the school's learning sciences graduate program, while the intellectual core of the Human Development and Psychological Services and Social Policy Programs comes from the school's human development and social policy graduate program.

## Preprofessional Preparation

SESP programs offer opportunities to prepare for a number of career options. Students enroll with a wide variety of academic and career goals. Some intend to go immediately to graduate and professional schools, while others plan to enter a profession upon graduation. They are encouraged to design their programs with career objectives or graduate and professional school admission policies in mind.

Human Development and Psychological Services, Learning and Organizational Change, and Social Policy are especially appropriate programs for those seeking careers in management, consulting, education reform, design of knowledge systems, clinical psychology, social work, counseling, law, public service, human resources, and public sector management.

The Secondary Teaching Program is intended for those wishing to teach in middle and secondary schools.

Students interested in such fields as child development, social work, clinical psychology, medicine, and counseling normally enter the Human Development and Psychological Services Program. The core course work in human development and psychological counseling, combined with other courses in psychology, sociology, and interpersonal communication, is particularly important for students considering such careers. Students with these interests are encouraged to include in their program the prerequisites in psychology and quantitative methods needed for graduate work in psychology and in the human service professions.

The Learning and Organizational Change Program is well suited to students who plan careers in management, consulting, change management, training, design of knowledge systems, and human resources in profit and not-for-profit organizations as well as those interested in reforming education through curriculum and organizational design in schools. Students combine core course work in learning sciences, organization behavior, psychology, and human development with the necessary work in economics, quantitative methods, communications, and computer science to prepare for careers as organizational leaders and change agents and for graduate study in education, the social sciences, and management.

Students interested in public service and law normally choose to follow the requirements of the Social Policy Program, where they can combine the policy-related course work with courses in political science, communication studies, economics, urban affairs, and sociology to prepare either for graduate work in law or public policy or for policy positions in public and private agencies. Students in the Social Policy Program are encouraged to use electives to build specialties in such areas as juvenile justice, advocacy programs, and policy analysis and to develop the oral and written communication skills important to success in law school and public policy positions.

In all three programs — Human Development and Psychological Services, Learning and Organizational Change, and Social Policy — students focus on the interdisciplinary study of human behavior as it is influenced by social institutions, understanding the behaviors that people bring to various institutional contexts, identifying and analyzing how behaviors are shaped in these environments, and establishing criteria by which to evaluate the purposes and effectiveness of institutional activities.

To work toward these goals, students register for a one-quarter practicum in off-campus settings, such as governmental entities, community agencies, hospitals, juvenile homes, learning and development departments of for-profit organizations, and law firms, where they can observe and participate in the activities of a socializing institution. Concurrent with this practicum, taken during the junior year (including the summer before or after their junior year), students meet in a weekly practicum analysis seminar. This seminar helps them integrate their past learning from course work with their observations of human behavior in an organizational setting. Practicum sites are located in Chicago, Washington D.C., and San Francisco.

## **Distribution Requirements**

- All students must complete at least two courses in each of the following areas:
- I. Natural sciences
- II. Formal studies
- III. Historical studies
- IV. Values
- V. Literature and fine arts

In general, distribution requirements for the School of Education and Social Policy follow the pattern approved by the Judd A. and Marjorie Weinberg College of Arts and Sciences. Courses approved by Weinberg College may be used to meet SESP distribution requirements. In addition, selected courses from Weinberg College and professional schools throughout the University may be used to fulfill distribution requirements with the consent of the student's adviser.

# Human Development and Psychological Services, Learning and Organizational Change, and Social Policy Programs

# SESP Core

Human Development and Psychological Services, Learning and Organizational Change, and Social Policy students must complete the SESP intellectual core. Students gain a basic understanding of a particular period of human development by choosing either SESP 201 Human Development: Childhood and Adolescence or 203 Human Development: Adulthood and Aging. One course chosen from the following is also required:

SESP 201 Human Development: Childhood and Adolescence

SESP 202 Introduction to Community Development

SESP 203 Human Development: Adulthood and

Aging

LOC 212 Learning and Understanding

SESP 316 Moral Values in Human Development: An Introduction

SESP 317 Gender and the Life Course

- SESP 318 Adult Development and Work Careers
- SESP 319 Family Development in Changing Society

Students must demonstrate theoretical and practical mastery of quantitative and conceptual analysis by completing two research methods courses, STAT 206 Elementary Statistics for Research and SESP 372 Methods of Observing Human Behavior. Students must complete 372 before undertaking the practicum and practicum analysis seminar component of the intellectual core.

In the practicum, taken during the junior year, students complete a supervised practicum experience during the course of their program of study. The practicum involves a one-quarter unpaid internship in an off-campus setting related to the student's program. Concurrent with the internship, students attend a weekly seminar on campus that integrates their experiential knowledge with the theoretical training in their course work. They earn four credits for the practicum and seminar (two for SESP 383 and two for SESP 385).

Students must contact the practicum director in the school's Office of Student Affairs at least two quarters (perhaps three, depending on the city in which the practicum occurs) before the beginning of the quarter in which the practicum will be taken. The practicum director advises students about procedures and application materials for a practicum placement.

## Individual Program Requirements

Students in the Human Development and Psychological Services, Learning and Organizational Change, and Social Policy Programs must prepare a plan that includes a rationale for the configuration of courses chosen for their program. Many students work with their advisers to develop a specialization within their program by selecting five or more courses around a particular theme. The program plan must be submitted to the SESP Office of Student Affairs for approval in the sophomore year no later than the quarter before the intended practicum.

Human Development and Psychological Services Students in this program explore in depth the complexity of the contributions to human development of institutions such as the family, the educational system, government, religious organizations, and the workplace. Students are expected to work with their advisers to develop an individualized program of study.

Total requirements — 45 courses

# **Distribution requirements** — 10 courses **Core** — 8 courses

# Major program — 16 courses

- Core 5 courses
- HDPS 210 Introduction to Psychological Services HDPS 301 Introduction to Counseling
- 3 courses chosen from HDPS 302 The Human Personality, HDPS 303 Intervention Strategies, HDPS 311 Group Dynamics, and SOC POL 304 Social Policy and the Human Services
- Specialization 11 courses, at least 4 at the 300 level, selected from an approved list in human development and psychological services and other areas such as anthropology, communication studies, linguistics, psychology, and sociology

# Electives — 11 courses

Students are encouraged to discuss their elective plans with their advisers; they may be able to pursue a second major or minor using elective credits.

# Learning and Organizational Change

This program teaches students how to increase individual and organizational effectiveness through improved uses of knowledge within organizations. This innovative concentration embodies technology globalization, changing demographics, and new discoveries about effective learning and organizational behavior. Students are expected to work with their advisers to develop an individualized program of study.

Total requirements — 45 courses

## **Distribution requirements** — 10 courses

Core — 8 courses

## Major program — 16 courses

• Core — 6 courses

LOC 211 Introduction to Organization Theory and Practice

LOC 212 Learning and Understanding

LOC 301 Macrocognition: Intelligence in Context

LOC 302 Education and the Changing Workplace

LOC 306 Studies in Organizational Change

LOC 310 Learning Organizations for Complex Environments

- Project 1 300-level project course agreed upon by the student and the academic adviser
- Specialization 9 courses, at least 3 at the 300 level, selected from an approved list in learning and organizational change and other areas such as cognitive science, economics, English, mathematics, psychology, and sociology. Students are encouraged to take at least 3 courses in economics

(including ECON 310-1 Microeconomics and ECON 311 Macroeconomics), technology, and international studies or foreign language.

Electives — 11 courses

Students are encouraged to discuss their elective plans with their advisers; they may be able to pursue a second major or minor using elective credits.

# Social Policy

Students in this program explore in depth the way in which policy decisions and social institutions influence the course of human lives. Students are expected to work with their advisers to develop an individualized program of study.

Total requirements — 45 courses

Distribution requirements — 10 courses

Core — 8 courses

Major program — 16 courses

- Core 5 courses
- SOC POL 201 Introduction to Social Policy SOC POL 304 Social Policy and the Human Services

SOC POL 307 Educational Policy

SOC POL 330 Economics of Social Policy

- ECON 201 Introduction to Macroeconomics or ECON 202 Introduction to Microeconomics
- Specialization 11 courses, at least 5 at the 300 level, selected from an approved list in social policy and other areas such as African American studies, economics, linguistics, political science, and sociology

Electives — 11 courses

Students are encouraged to discuss their elective plans with their advisers; they may be able to pursue a second major or minor using elective credits.

## Secondary Teaching Program

Students enrolled in the School of Education and Social Policy or elsewhere in the University who wish to pursue the secondary teaching major and recommendation for secondary teaching certification must apply for formal admission to the Secondary Teaching Program. Students completing degree requirements within SESP receive the degree of bachelor of science in education and social policy; 45 units are required for the degree. Students in other undergraduate schools also must complete a major and fulfill degree requirements of their schools.

# Preparation for Professional Work in Middle and Secondary Schools

Those interested in the undergraduate Secondary Teaching Program should contact SESP's Office of Student Affairs. The Secondary Teaching Program is approved by the Illinois State Teacher Certification Board; those completing the program therefore qualify for secondary certification in Illinois. There is reciprocity with many other states.

Students in the Secondary Teaching Program take extensive course work in the liberal arts and complete a major in the academic subject they expect to teach. They also observe professional teaching in a variety of educational settings and complete a part-time coteaching practicum experience and a full-time student teaching internship.

# Distribution Requirements (15–17 units)

Distribution requirements for the Secondary Teaching Program are the same as those for Weinberg College, and they meet the general education requirements of Illinois teacher certification. (Please consult with the teacher certification manager to determine how courses in interdisciplinary programs such as African American studies, gender studies, etc., meet distribution requirements.)

I. Natural sciences (2)

2 courses chosen from astronomy, biological sciences, chemistry, geological sciences, or physics

II. Formal studies (2)

2 courses chosen from mathematics, statistics, or logic

III. Social and behavioral sciences (2)

2 courses chosen from anthropology, economics,

- political science, psychology, or sociology
- IV. Historical studies (2)
- 2 history courses

V. Values (2)

2 courses chosen from religion, ethics, or philosophy VI. Literature and fine arts (2)

2 courses chosen from art history or theory, classics, comparative literature, or music

VII. Communication (2)

2 intensive writing courses and one public speaking or other oral communication course

VIII. Multicultural (2)

2 courses reflecting a non-Western perspective. Courses taken in areas III through VI may also fulfill this requirement.

# Professional Core (11 units)

- SESP 201 Human Development: Childhood and Adolescence
- TEACH ED 304 Seminar on Teaching: Introduction to Schooling in Communities
- TEACH ED 313 Problems in the Philosophy of Education
- TEACH ED 327 Educating Exceptional Children
- TEACH ED 341 Teaching and Learning in Social and Cultural Contexts
- 1 methods and techniques course chosen from TEACH ED 354 through 359 Methods and Techniques
- TEACH ED 378 Practicum/Seminar: Humanities or 379 Practicum/Seminar: Mathematics and Science
- TEACH ED 388 Student Teaching Seminar: Humanities or 389 Student Teaching Seminar: Mathematics and Science

# **Teaching Major Requirements**

Majors are as listed below under specific teaching major fields, which are designed to meet requirements of the Illinois State Board of Education. Teaching major requirements may differ from those of a departmental major, and departmental course offerings change frequently. Teacher certification candidates are required to meet regularly with the advising staff of the Office of Student Affairs to ensure that certification requirements are met.

# Art (12 units)

- 3 introductory courses: ART 120, 124, 125
- 6 studio courses: ART 222, 225, and 4 additional courses in painting and drawing, printmaking, sculpture, or photography
- 3 art history, theory, and criticism courses:
  2 chosen from ART HIST 220, 230, 240, 250;
  1 chosen from ART 270, 272, or 372

# **Biological and Physical Sciences**

**Biological Sciences (12 units)** 

- 4 core courses: BIOL SCI 210-1,2,3, 301
- 2 botany courses
- 3 zoology courses
- 1 laboratory course

• Electives: 2 300-level biological sciences courses Related courses: CHEM 101, 102, 103, 210-1,2; MATH 214-3 or STAT 202 or 302; PHYSICS 130-1,2,3 or 135-1,2,3

# Chemistry (12 units)

- General chemistry: CHEM 101, 102, 103 or 171, 172
- Organic chemistry: CHEM 210-1,2 or 212-1,2
- Physical chemistry: CHEM 342-1,2
- Advanced chemistry: CHEM 329, 333
- Laboratory: 1 course chosen from BIOL SCI 301 or CHEM 215, 335, 345, or 361
- Electives: 2 or 3 200- or 300-level chemistry courses to bring total to 12 units
- Related courses: MATH 214-1,2,3, PHYSICS 135-1,2,3, and 1 additional physics course

## Physics (12 units)

- 3 introductory courses: PHYSICS 125-1,2,3 or 135-1,2,3
- 4 classical physics courses chosen from PHYSICS 330-1,2, 331, 332, 333-1,2
- Modern physics: PHYSICS 339-1,2
- Laboratory: PHYSICS 359-1,3
- Related courses: MATH 214-1,2,3, 215, 217, 221

To qualify for certification, biological and physical sciences students must also complete course work in another related field.

## English (14 units)

- 2 prerequisites: ENGLISH 210, 298
- 2 composition courses: ENGLISH 205 and 1 additional composition course
- 7 literature courses: 2 American literature courses, 2 English literature courses, and 3 additional literature courses
- 1 linguistics course chosen from LING 110, 204, 205, 206, 207, 209, 311, 312, 318, 319
- 1 reading and language acquisition course: TEACH ED 323
- 1 course in Asian, African, Central American, Native American, or South American literature

# **Foreign Languages**

# French (12 units)

- 6 language courses: FRENCH 202, 203, 302-1,2, 303, 305
- 3 literature courses: FRENCH 210 and 2 additional 300-level literature courses taught in French
- 3 culture and civilization courses: 2 courses chosen from FRENCH 201, 280, 282; 1 chosen from 380, 391-1,2, 396

# German (12 units)

• 4 courses in language: 2 courses chosen from GERMAN 204, 205, 208; 2 quarters of 391 with different topics

- 3 courses in literature: 3 quarters of GERMAN 201 with different topics
- 5 courses in literature and culture: 3 quarters of GERMAN 310–1,2,3,4; 329; 332

## Latin (12 units)

- 3 language courses: LATIN 101-1,2,3
- 4 literature courses: LATIN 201-1,2,3, 310
- 5 other 200- or 300-level Latin, Greek, or classics courses

# Spanish (12 units)

- 3 courses in language and composition
- 5 literature courses
- 4 additional 300-level courses taught in Spanish, with at least 1 course in Spanish literature and culture and one course in Latin American literature and culture

# Mathematics (12 units)

- 5 calculus/analysis courses chosen from MATH 214-1,2,3, 215, 221, 303, 305, 310-1,2,3, 317-1,2
- 2 geometry courses chosen from MATH 308, 326, 328, 329
- 2 algebra courses chosen from MATH 217, 334, 337-1,2,3
- 1 probability and statistics course chosen from MATH 330-1 and STAT 202, 302
- 1 computer science course
- 1 additional 300-level mathematics course

# Social Sciences

## History (12 units)

- 3 courses in U.S. history
- 2 courses in European history
- 1 course in non-Western/third world history
- 6 additional history courses, 4 of which must be 200- or 300-level courses

# Economics with History (16 units)

- 4 introductory courses: ECON 201, 202, 281; STAT 210
- 4 major courses: ECON 310-1, 311, and 2 additional 200- or 300-level economics courses
- 4 U.S. history courses
- 4 world history courses

## Political Science with History (16 units)

- 3 introductory courses: POLI SCI 220 and 2 courses chosen from 201-1,2, 221, 230, 240, 250
- 2 methods courses: POLI SCI 395; 1 course chosen from 310, 311, or 312

- 3 300-level political science courses
- 4 U.S. history courses
- 4 world history courses

Sociology with History (16 units)

- 2 100- or 200-level sociology courses
- 4 theory and methods courses: SOCIOL 226, 303, 306, 329
- 2 300-level sociology courses
- 4 U.S. history courses
- 4 world history courses

# Electives

Additional units of elective course work must be taken to complete the 45-unit degree requirement. Students are encouraged to discuss their elective plans with the teacher certification manager.

## **Clinical Experiences**

Secondary teaching students typically complete a practicum during spring quarter of their junior year. Applications must be submitted to the undergraduate teacher education director by Thanksgiving break preceding the fall student teaching term. The practicum includes a minimum of 10 hours per week for 10 weeks in a classroom. Students take three evening seminars (TEACH ED 341; the applicable methods and techniques course, 354–59; and the practicum seminar, TEACH ED 378 or 379) and one additional course that quarter. They must complete a preliminary contract for their practicum during the first two weeks of the quarter.

They then typically complete a student teaching internship during fall or winter quarter of their senior year. To apply for student teaching, students must have satisfactorily completed their practicum and related requirements (see above) and at least nine courses in their teaching major. They also must have a grade point average of 2.5 or above in their major and professional core courses. (Note: While a grade point average of 2.5 is the minimum requirement, an average closer to 3.0 is more competitive for a student teaching placement.)

The student teaching internship involves full-time placement (40 hours per week) for 10 weeks in a local school. Students must also attend one evening seminar (TEACH ED 388 or 389). The internship and the seminar together earn four units of credit. No other courses are taken during that quarter. Students must complete a preliminary contract for their student teaching internship during the first two weeks of the quarter.

## Additional Requirements for Certification

- United States citizenship or evidence of permanent resident status
- Illinois State Teacher Certification Examination (Basic Skills and Content Area tests)

Information about the required Illinois State Teacher Certification Examination is available in the Office of Student Affairs.

## **Recommendation for Certification**

Students successfully completing approved teacher training programs at Northwestern qualify to receive Illinois certification. Although legal requirements for certification vary from state to state, each teacher training program offered at Northwestern is sufficiently flexible to permit a student who plans carefully to complete provisional requirements of most states. Information concerning these requirements is available in SESP's Office of Student Affairs.

Northwestern will recommend a student for a teaching certificate only when the student has successfully completed an approved Northwestern University teacher preparation program. A student who qualifies for certification as described above must apply to the University's designated certifying official for a recommendation for certification. Students in the Schools of Music and Speech should apply through their schools. All other students should apply through the SESP Office of Student Affairs. Applications must be submitted early in the quarter preceding the final quarter of study at Northwestern.

Graduates of a teacher training program at Northwestern who do not apply for certification upon graduation may not be eligible for licensure. The University will make every effort to assist its graduates in obtaining teaching certification but cannot guarantee eligibility at a later date.

# **Other Programs**

The interdisciplinary and flexible nature of SESP programs allows many undergraduates to take a minor in addition to their SESP program or enroll in University-wide certificate programs in business institutions, international studies, and undergraduate leadership. With careful planning, some students may elect to have a second major outside SESP. Many students also choose to spend one or more quarters in a Northwestern University–approved study abroad program.

# Service Learning Certificate

Students across the University may earn a certificate in service learning through a two-year program that connects volunteer experience with an academic component to increase their understanding of community needs. To earn the certificate, students must complete three required courses — SESP 202 Introduction to Community Development and two other courses selected from an approved list — and 50 hours of volunteer service in each of two years at approved sites. They also participate in facilitated discussions to reflect on the experience. In the second year of the program, students complete a capstone project resulting in a research paper or study that analyzes a community issue. For more information and an application, contact the SESP Office of Student Affairs.

# Courses

## **Core Courses**

## SESP 201-0 Human Development: Childhood and

**Adolescence** Personal, social, and cognitive development, birth through adolescence. Interplay of biological and experiential factors on ego, personality, linguistic, and conceptual development.

# SESP 202-0 Introduction to Community Development

Historical and contemporary community building efforts, focusing on Chicago's neighborhoods. Community development strategies: the settlement house, community organizing, and community economic development.

**SESP 203-0 Human Development: Adulthood and Aging** Psychological, sociological, and biological factors influencing socialization and development from young and middle adulthood through old age. Influences of family, school, and work on the individual.

**STAT 206-0 Elementary Statistics for Research** See Statistics, Weinberg College of Arts and Sciences.

**SESP 316-0 Moral Values and Human Development: An Introduction** Moral development of the individual from several perspectives: age-developmental differences, cross-cultural and gender differences, relationship between moral reasoning and moral behavior.

**SESP 317-0 Gender and the Life Course** How age and sex serve as a basis for the social construction of men's and women's lives. How social forces operate to create contrasting life trajectories, role patterns, and transitions; the role of social policies. Comparative view of different societies and periods in recent history.

**SESP 318-0 Adult Development and Work Careers** Adult development and careers from the perspectives of psychology, sociology, and organizational behavior. Individual career-development strategies and alternative career systems.

## **SESP 319-0 Family Development in Changing Society** Societal changes and their effects on the family.

**SESP 372-0 Methods of Observing Human Behavior** Guided practice in systematic and participant observation of human behavior. Observer bias, field notes, unobtrusive measures. Prerequisite for SESP 383 and 385.

**SESP 383-0 Practicum** (2 units) Internship *only* for students in the Human Development and Psychological Services, Learning and Organizational Change, and Social Policy programs. Intensive, supervised participant observation of interpersonal relationships, especially those of professional and client, and the effects of institutional structure and policy on both professionals and clients. To be taken concurrently with 385. Prerequisites: SESP 372 and consent of program director.

**SESP 385-0 Practicum Analysis Seminar** (2 units) Small-group meetings *only* for students in the Human Development and Psychological Services, Learning and Organizational Change, and Social Policy programs to analyze 383 practicum experiences, organize their perceptions of their own internships, and share them with other class members. To be taken concurrently with 383. Prerequisite: SESP 372.

# **Research and Other Opportunities**

**SESP 298-0 Student-Organized Seminar** Students initiate courses supervised by sponsoring faculty to explore topics not covered in other courses. Consulting with a faculty sponsor, students prepare a seminar plan and submit it to the assistant dean for student affairs before the middle of the quarter preceding the quarter in which the seminar is to be held. The plan includes a topic description, reading list, specifications of term papers and written examinations, prerequisites, and meeting schedule. All proposals are formally reviewed and approved before the seminar is offered. Enrollment is allowed in only one Student-Organized Seminar per quarter and must be on the pass/no credit basis. Consult with the assistant dean for further details.

**SESP 390-0 Research Apprenticeship** Opportunity for undergraduates to apprentice with faculty mentors engaged in research projects centering on questions of learning and human development and the organizational arrangements in which these processes occur. Prerequisites: consent of instructor directing the research project and assistant dean. (Students wishing to register must first complete the Request for Independent Study/Special Courses Form available in the SESP Office of Student Affairs.)

**SESP 398-0 Honors Thesis** Open to seniors who have attained a cumulative grade point average of 3.5 by the end of junior year. Prerequisites: consent of assistant dean and instructor directing the honors thesis.

**SESP 399-0 Independent Study** Under the direction of faculty members, students pursue special topics not covered in regular courses around the questions of learning and
human development and the organizational arrangements in which these processes occur. Prerequisites: consent of instructor directing the study and of the assistant dean. (Students wishing to register must first complete the Request for Independent Study/Special Courses Form available in the SESP Office of Student Affairs.)

## Human Development and Psychological Services

**HDPS 210-0 Introduction to Psychological Services** Overview of professional degrees, sites, and various populations in psychological services. Introduction to the most common mental disorders and counseling fundamentals used in clinical mental health careers.

**HDPS 301-0 Introduction to Counseling** Overview of counseling theories, techniques, client systems, and service settings.

**HDPS 302-0 The Human Personality** Classic and contemporary psychological approaches to personality; understanding the whole person in his or her societal and historical context. Emphasis on both theory and research.

**HDPS 303-0 Intervention Strategies** Intervention strategies in the areas of human development, education, psychological well-being, and social welfare within a socialecological framework. Emphasis on long-term change in people and social environments.

**HDPS 311-0 Group Dynamics** Theory and research in the social psychology of groups and social systems. Small- and large-group dynamics; intergroup relations. Participation in a weekend group relations conference.

HDPS 332-0 Career Development: Theory and Counseling Process of career development and its relation to the world of work. Discussion of career development theories. Focus on self-assessment; decision-making skills; educational, occupational, and community information; and job-seeking skills.

**HDPS 340-0 Sex, Love, and Marriage** Explores sexuality and love within the context of marriage using historical, sociological, and psychological perspectives.

#### Learning and Organizational Change

LOC 211-0 Introduction to Organization Theory and Practice Major organizational behavior theories are intro-

duced; opportunities for students to examine these theories and practice through organizational analysis.

**LOC 212-0 Learning and Understanding** Framework for learning in all aspects of life: traditional school subjects, professional training, creative and performing arts, personal health, basic survival skills. Students are encouraged to draw from their own experiences.

**LOC 215-0 Ecology and Design of Intervention** Cognitive and social consequences of design for designers, implementers, and users.

**LOC 301-0 Macrocognition: Intelligence in Context** How people learn to understand, reason, and solve problems; knowledge representation, expertise, transfer, and metacognition; study of distributor cognition.

**LOC 302-0 Education and the Changing Workplace** The changing nature of work and how this will affect skills required for work and the teaching of those skills in the 21st century.

**LOC 306-0 Studies in Organizational Change** Theories and methods of organizational changes are examined through analysis of organizational adaptations using theories from learning sciences and organizational behavior.

LOC 310-0 Learning Organizations for Complex Environments Major change factors, including technology, globalization, and demographics, and their impact on organizations; how organizations are creating and responding to these changes through organizational design, learning systems, and human resource changes.

**COMP SCI 330-0 Human–Computer Interaction** See Computer Science, McCormick School of Engineering and Applied Science.

**LOC 391-1,2 Organizational Planning and Analysis** Culminating academic experience in which students apply knowledge and skills to analysis of real-world learning and organizational change problems and to the design and analysis of solutions. **1.** Seniors only. **2.** Learning and organizational change seniors only.

#### Secondary Teaching

**TEACH ED 304-0 Seminar on Teaching: Introduction to Schooling in Communities** Action research methods including observation/field notes, interviewing, and artifact analysis — as means to understanding how schools work and how theory and practice relate. Includes 50 hours of field experience.

**TEACH ED 313-0 Problems in the Philosophy of Education** Classical and modern philosophies of education. Text interpretation, analysis of ideas, argument construction; relationship of philosophy to educational issues. Students develop their own philosophy of education.

**TEACH ED 323-0 Foundations of Reading and Language Acquisition** Cognitive foundations of reading comprehension processes and their influences on methods of instruction and assessment. Interrelationships among reading processes and language learning and their implications for instruction and assessment.

**TEACH ED 325-0 Foundations of Writing Processes (Secondary)** Cognitive and sociocultural foundations of writing processes and their implications for instruction and assessment. Includes supervised field experience.

#### **TEACH ED 327-0 Educating Exceptional Children**

Students with disabilities, including learning disabilities resulting from human development and/or accidents; understanding and application of approved emergency, educational, and rehabilitative activities; interrelationships with medical, health, and educational personnel.

## TEACH ED 329-0 Health and Physical Development

Interaction and interdependence of physical well-being, mental and emotional health, and surrounding social environment. Topical areas covered for secondary education students completing state certification requirements.

**TEACH ED 341-0 Teaching and Learning in Social and Cultural Contexts** Current instructional theory, research, and practice. Definition of instructional goals, implementation of goals through curricular design, measurement of relevant outcomes. Concurrent registration in 378 or 379 and the applicable methods and techniques course, 354–59, required. Prerequisite: consent of SESP Office of Student Affairs.

**TEACH ED 354–59 Methods and Techniques** Students in the Secondary Teaching Program take one of the following six methods courses:

- TEACH ED 354 Methods and Techniques: Art
- TEACH ED 355 Methods and Techniques: Foreign Languages
- TEACH ED 356 Methods and Techniques: English
- TEACH ED 357 Methods and Techniques: Secondary Mathematics
- TEACH ED 358 Methods and Techniques: Sciences
- TEACH ED 359 Methods and Techniques: Social Sciences These methods courses analyze the literature and

research related to the subject area and teaching methodology. In addition, they examine the development of learning experiences, methods, and educational techniques appropriate to the middle and high school levels. Concurrent registration in 341 and 378 or 379 required.

## TEACH ED 378-0 Practicum/Seminar: Humanities TEACH ED 379-0 Practicum/Seminar: Mathematics and Science

Students complete a practicum that requires a minimum of 10 hours per week for 10 weeks observing and assisting in a school approved by the director of undergraduate teacher education. Concurrent registration in 341 and the applicable methods and techniques course (354–59) required.

## TEACH ED 388-0 Student Teaching Seminar: Humanities TEACH ED 389-0 Student Teaching Seminar: Mathematics and Science (4 units)

Further development of teaching methodologies through an intensive 10-week clinical experience and teaching under the supervision of master teachers in the teacher-training schools. Increasingly sophisticated teaching responsibilities and, finally, primary responsibility for teaching a group or a class. Prerequisites: 341; 378 or 379; the applicable methods and techniques course (354–59); successful completion of the the practicum experience; an approved contract for the internship experience; and consent of the director of undergraduate teacher education.

#### **Social Policy**

**SOC POL 201-0 Introduction to Social Policy** Social policy formulation: substance of major American social policies and manner in which the American political system shapes social policy in this country.

**SOC POL 303-0 Administration and Policy Studies** Education and human development as a multi-institutional, ecological, and macrosociological phenomenon. Issues in the philosophy, history, economics, and politics of education.

**SOC POL 304-0 Social Policy and the Human Services** Development of social policy for human services in the United States. Human service policies for education, mental health, physical health, income, and aging.

**SOC POL 305-0 Law and Social Policy** Use and influence of the legal system in and on social institutions and policy.

**SOC POL 307-0 Educational Policy** Conflict between societal imperatives for selecting and preparing youth for future careers and offering youth opportunity; how society and schools address this conflict; various approaches to policy reform.

**SOC POL 310-0 Legal Aspects of Education** Structure of school governance; decision making; relevant state and federal legislation affecting public schooling.

**SOC POL 330-0 Economics of Social Policy** How economists view social policy issues. Economic models of house-hold decision making. How economists account for costs and benefits of public and private programs and decisions. Prerequisite: ECON 201, 202, or consent of instructor.

## Robert R. McCormick School of Engineering and Applied Science

The McCormick School of Engineering and Applied Science is committed to providing leadership for the technological foundation of our society, economy, environment, and culture. The school's mission is twofold: the personal and professional development of its students and faculty and the development and application of new technology, which is increasingly of an interdisciplinary nature.

McCormick is dedicated to a high standard of excellence in

- teaching fundamentals of science and engineering disciplines and stimulating students to become innovative thinkers and leaders able to cope with complex issues in a changing environment
- preparing undergraduate and graduate students for professional engineering careers in a competitive world, capable of understanding, applying, and contributing to technology in whatever areas or careers they subsequently pursue

Undergraduate students in McCormick may follow a curriculum leading to a bachelor of science degree in any of the following fields:

applied mathematics biomedical engineering chemical engineering civil engineering computer engineering computer science electrical engineering engineering science environmental engineering industrial engineering manufacturing engineering materials science and engineering mechanical engineering

medical engineering (Honors Program in Medical Education only)

The programs in biomedical, chemical, civil, computer, electrical, environmental, industrial, manufacturing, mechanical engineering, and materials science and engineering, as well as McCormick and its cooperative education program, are accredited by the Engineering Accreditation Council of the Accreditation Board for Engineering and Technology.

With the proper use and combination of requirements, options, and electives, students may prepare themselves for graduate work in engineering and also for graduate studies in medicine, law, business, or other areas. Bachelor of science degrees are awarded also in approved ad hoc combined studies programs.

Graduate programs of study are available in all the above fields as well as in theoretical and applied mechanics, manufacturing management, project management, and engineering management. These programs leading to degrees at the master's and doctoral levels are described completely in the Graduate School catalog and in publications on engineering graduate programs.

Excellence in research is a distinguishing characteristic of the engineering faculty. A faculty such as this, working at the frontiers of knowledge, is in the best position to maintain currency in courses and curricula and to develop an atmosphere inspiring scholarship and originality among students.

McCormick has a student body of approximately 1,500 undergraduates and 950 graduate students. It is housed in the Technological Institute, which contains more than 750,000 square feet of floor area and provides excellent educational and research facilities.

The Seeley G. Mudd Library for Science and Engineering, adjoining the Technological Institute, is an integrated and centralized collection serving engineering, applied mathematics, astronomy, biochemistry, biology, chemistry, and physics.

More information about McCormick can be found on its Web site (www.esam.northwestern.edu/).

### **Academic Policies**

# Requirements for the Degree of Bachelor of Science

Students must successfully complete all 48 courses of the curriculum or have equivalent academic experience. Students who interrupt their programs of study for an extended time during which degree requirements are changed will normally be held to the new requirements. Those who encounter curricular changes during their period of enrollment may choose to follow any curriculum during that period but must meet its requirements completely.

A grade point average of not less than C is required for all courses presented for the degree. The grade point average of the 16 major program courses presented for the degree must be at least 2.0. Further, no more than 2 of these courses may carry grades of D.

Students must complete the last 23 quarter-courses while enrolled as undergraduates in Northwestern University and must be enrolled in McCormick during the last three quarters of study.

Every candidate for a degree must file an application for the degree a year in advance of the date of graduation (see Academic Calendar).

In addition to and independent of the requirements set by McCormick, all students must satisfy the Undergraduate Residence Requirement. (See the Undergraduate Education section of this catalog.)

#### **Pass/No Credit Option**

McCormick undergraduates may take a maximum of eight quarter-courses under the pass/no credit (P/N) option for use toward the degree. During the freshman and sophomore years, however, only one course per quarter may be taken under the P/N option.

The P/N option may be used in the following areas:

- Basic program: In courses taken as social sciences/ humanities selections or as unrestricted electives. Although the number of 300-level courses is not restricted (to the limit of eight as above), only four 100- or 200-level courses may be taken under the P/N option and used to satisfy the seven-course requirement in the social sciences/humanities area and the speaking requirement. This option may not be used in mathematics, engineering analysis and computer proficiency, basic sciences, engineering design and communications, and basic engineering courses.
- Departmental program: Consult the department office or McCormick's Academic Services Office regarding the regulations for use of P/N in each departmental program.

## **Advanced Placement**

Advanced placement and college credit may be granted on the basis of the College Entrance Examination Board (CEEB) Advanced Placement tests. Placement or exemption may be granted on the basis of the CEEB tests or special examinations in subject areas or by appropriate analysis of high school background. Any placement (verified by a grade above Cin a subsequent course) in approved sequential work will reduce the course requirements for the BS by the number of courses preceding the placement. These stipulations regarding placement and exemption and degree requirements may differ from those of other schools of the University.

## Personal Computers

Since Northwestern's campus is fully networked, students can access local and remote information sources from dormitory rooms and laboratories. Accordingly, the McCormick faculty has adopted a policy making each engineering undergraduate responsible for his or her own computing hardware and software for basic tasks such as word processing, spreadsheet calculations, and graphics and for connection to the University's computer network. McCormick maintains a number of public and departmental computing laboratories, but these are used primarily for higher-level or specialized applications.

## Academic Options

## **Cooperative Engineering Education Program**

The Walter P. Murphy Cooperative Engineering Education Program alternates periods of paid industrial experience and academic studies for full-time students in all departments of engineering and applied science. During 18 months of industrial employment, students can apply theory while gaining practical experience. This perspective enables them to develop an understanding of the responsibilities of their future professional careers.

Freshmen are invited to participate in workshops to prepare them for the co-op program. Sophomores in good academic standing begin applying for co-op positions as early as the fall quarter. The co-op coordinator makes every effort to secure interviews for the students, so that cooperative work assignments are related to their professional objectives.

Generally, the first work experience for sophomore co-op students occurs the summer before their junior year. Co-op experience for juniors, transfer students, and others may begin as late as the spring of junior year. If necessary, with the help of the academic advisers, special schedules may be arranged to enable students to meet individual academic requirements as well as co-op requirements.

Students register for their work quarters, but no tuition or fee is charged. The registration keeps co-op students enrolled at Northwestern during work periods. While no academic credit is given for co-op, special BS/MS programs may use co-op experience as the basis for undergraduate projects and master's theses.

Although emphasis is on the experience gained from cooperative work rather than on the income, students in the co-op program may earn at least a portion of their educational expenses.

The following table shows the college-industry schedule for the five years of undergraduate education:

#### College-Industry Schedule

	Summer	Fall	Winter	Spring
Freshman		1	2	3
Sophomore	vacation	4	5	6
Junior	work	7	8	work
Presenior	work	9	work	10
Senior	work	work	11	12

Students who complete the co-op plan receive tuition rebates during their final academic quarters to assure that they will not pay higher total tuition than other students in the same entering class.

In addition to the academic degree, McCormick awards co-op students a certificate in recognition of successful completion of the Walter P. Murphy Cooperative Engineering Education Program. Students must successfully complete the schedule of school and work, which meets standards set by the program, the co-op employer, and ABET, in order to receive recognition as co-op students on graduation from McCormick.

In some states, ABET-accredited co-op experience may be credited for up to one year of the usual four years of engineering experience required for the Professional Engineer's License.

Employers of co-op students include government and service institutions as well as industry. Co-op coordinators visit participating employers periodically to discuss students' abilities, attitudes, and progress on the job. At the end of each work period, employers are asked to evaluate student performance and progress. It is important to note that neither students nor cooperative employers obligate themselves to permanent employment by virtue of the co-op status, although most students get impressive permanent job offers as a result of the co-op experience. Others are admitted to prestigious graduate and professional schools.

## **Undergraduate Honors Program**

Students with good scholastic records may be admitted to the Undergraduate Honors Program any time during their junior or presenior year. (Students within three quarters of graduation are past this admission point.) At the time of admission, they must have a cumulative grade point average of 3.5 or better.

Honors students participating in the program must (a) complete at least three units of approved advanced study (including courses normally accepted at the graduate level) with an average grade of B or better and (b) complete an extended independent study project (at least two quarters on the same topic) leading to an acceptable report.

Successful completion of the honors program will be noted on the student's transcript. Recognition also will be given in the Commencement program. If a student's individually evaluated performance is not judged to meet the standards of success, the student will receive course grades and credits as earned.

#### **Undergraduate Research**

Opportunities for undergraduate research are made available and encouraged in several ways. Each major field of study offers independent study courses for research enrollment on an elective basis. The Undergraduate Honors Program incorporates a required research component.

McCormick's Undergraduate Research Board, composed of student leaders, administers a program that funds individual research projects from the Sara Boley Undergraduate Research Fund. The board helps select the winner of the Harold Benedict Gotaas Award, presented to the senior engineering student who submits the best original research paper.

Students normally perform undergraduate research projects under the direction of faculty who are doing research in their department or in a University or McCormick research center, laboratory, or council. Engineering faculty may be associated with a variety

of research centers, including the DND-CAT Synchrotron Research Center at Argonne National Laboratory; the University's Center for Advanced Cement-Based Materials, Center for Catalysis and Surface Science, Infrastructure Technology Institute, Institute for the Learning Sciences, Materials Research Center, and Transportation Center; and McCormick's Center for Intelligent Processing of Composites, Center for Optimization Technology, Center for Parallel and Distributed Computing, Center for Photonic Communication and Computing, Center for Production and Logistics, Center for Quality Engineering and Failure Prevention, Center for Quantum Devices, Institute for Bioengineering and Nanoscience in Advanced Medicine, Institute for Environmental Catalysis, Materials Technology Laboratory, McCormick Manufacturing Institute, and Motorola Center.

#### **Multiple BS Degrees**

Students with wide-ranging interests may work toward two or more bachelor of science degrees in McCormick. The work in additional areas does not need to be completed at the same time, but the full requirements for each degree must be approved by each department or program no later than two academic quarters before the completion of work for the second degree but no earlier than the junior year. The full requirements for each degree must be satisfied. At least six additional courses or equivalents must be presented before the awarding of each additional degree.

#### Second Field of Specialization

Elective opportunities in the McCormick curriculum may be used toward a departmental program in another school of the University. Satisfactory completion of the requirements for the second program, verified by the appropriate department, will be noted on the student's transcript. Carefully planned electives will normally enable students to obtain a second field of specialization within the 48-course requirement for the BS degree.

#### **Concurrent BS/MS**

During their senior year, qualified undergraduate students at McCormick may work simultaneously toward the bachelor of science and master of science degrees in engineering. Integrated planning of course work allows the possibility of taking graduate-level courses during the third and fourth years. Also provided are early assurance of graduate admission and early planning of project or research work.

It is possible for some students to finish the work for an MS in a combined program in less than the normal five years. In McCormick, any advanced placement, exemption, or demonstrated proficiency will reduce the course work requirements.

The course requirements remain unchanged for the two degrees. The McCormick requirement for the BS is 48 courses, and the requirement for the MS is specified by the individual department (9–12 courses). No course used for the MS requirement may be used for the BS requirement.

Application for admission to concurrent BS/MS study may be made any time during the seventh through the ninth quarters, in accordance with departmental advice. However, upon beginning graduate study, students may have no more than four courses to complete toward the undergraduate degree. The graduate application must be accompanied by a full plan of BS/MS studies and must be approved by the appropriate department and the Graduate School. A department may require that students do additional work preliminary to a concurrent BS/MS program at any level.

#### Five-Year BA/BS

McCormick encourages breadth of interest and to this end supports combined degree programs in engineering and liberal arts. One approach is the 3-2 program, in which students attend a liberal arts college for the first three years with a course of study that develops a basic understanding of science and mathematics and a strong component in the social sciences and humanities. Following the three years of basic studies and on recommendation of their liberal arts college, students transfer to Northwestern. When they complete the requirements of a field of engineering in two years, a BS in engineering is awarded by Northwestern and a BA by the original college. Any student enrolled in an accredited liberal arts college program may apply for transfer admission to follow a 3-2 plan.

Another approach to combining liberal arts and engineering is a parallel arrangement of studies at Northwestern, in which a fifth year results in a BA with a major in Weinberg College and a BS in a particular field of engineering. Students should file a petition outlining this dual plan of study before their fourth year; it must be approved by the departments and schools administering the degree work. Students must complete the stated requirements of both schools and expected majors.

## **Engineering and Music**

Highly capable students who have a strong interest in and commitment to both engineering and music may pursue a five-year program leading to bachelor's degrees in both fields. In engineering, any field of study may be chosen, resulting in a bachelor of science in the chosen field. In music, the bachelor of music or bachelor of arts in music is awarded. The program may be entered no later than the beginning of the sophomore year; admission requires concurrent approval of both the School of Music and McCormick. (See also Five-Year BS/BMus or BS/BAMus in the School of Music section of this catalog.)

## International Engineering Experience Certificate

McCormick students will be awarded a certificate in international engineering experience for both completing three quarters of foreign language study while enrolled at Northwestern and spending six months abroad as full-time students or on co-op assignments, in paid engineering employment, or on project work at a foreign university, research institute, or company. Northwestern and McCormick have connections with selected leading universities around the world. Some of these provide access to academic opportunities and others to research collaborations. Contact the Undergraduate Engineering Office for more information.

#### **Business Basics Certificate**

Students who aim to have business careers and want to improve their ability to make a contribution soon after they graduate may wish to consider pursuing a certificate program in business basics. This program involves a combination of business courses and work experience. Students who complete the co-op program need to take 2 courses in addition to the 48 needed for a bachelor's degree; other students will need to take four extra courses. An acceptable report on the work experience is also required.

#### Honors Program in Undergraduate Research

The Honors Program in Undergraduate Research in McCormick provides an unusual opportunity for students with superior motivation and scholastic credentials (high school rank and test scores) to be admitted to work with an engineering faculty mentor/ adviser in a challenging research project. This research project participation could begin in the first year and continue through all the undergraduate years, allowing close association with a faculty researcher probing the frontiers of knowledge in engineering or engineering science.

This unique opportunity for experiencing the excitement of original research and the associated approach to learning provides students with not only encouragement but also excellent preparation for graduate study. If students in the Honors Program in Undergraduate Research achieve advanced placement as well as satisfactory performance in the research project and accompanying course work, during their third year of undergraduate study they will be considered for admission to the Graduate School and for award of financial aid.

#### Honors Program in Engineering and Management

Students are eligible to participate in a joint program between McCormick and the Kellogg Graduate School of Management. High school students whose scholastic credentials are superior and who are strongly motivated to combine engineering and management expertise in their future careers may be admitted to undergraduate engineering in McCormick and also granted deferred admission to the master of management program in Kellogg.

The program consists of a combination of undergraduate and graduate study interspersed with related work experience. The initial studies are in a chosen field of engineering, with a schedule of school and work in industry, preferably in accordance with the co-op program. Students must maintain a 3.0 grade point average.

After participants receive their bachelor of science degree in their chosen engineering field, they must gain two additional years of full-time work experience (or three additional years if co-op was not completed) in industry before the two years of full-time study leading to the master of business administration degree.

#### **Honors Program in Medical Education**

The Honors Program in Medical Education (HPME) is designed for unusually gifted high school students who seek a career in medicine or medical science. It provides a plan whereby students entering Northwestern are admitted simultaneously to Weinberg College, McCormick, or the School of Speech and to the Medical School. HPME students then participate in a challenging program, with the first three years in undergraduate study and the last four years in the Medical School, thus reducing the period of formal training by at least one year.

Students who meet the entrance requirements of McCormick may pursue a program leading to the bachelor of science degree in medical engineering after five years and the doctor of medicine degree after seven years.

#### Honors Program in Engineering and Education

The Honors Program in Engineering and Education is designed for students who have strong interests in education and training as well as in science, mathematics, and engineering. The program provides an opportunity to complete a graduate degree in the learning sciences and an undergraduate degree in engineering in five years while gaining industrial or research experience related to a specific expertise in the field.

The program places high value on both academic research and industrial experience. Students may choose industry experience in educational software development through the co-op program, research experience with a faculty member at the Institute for the Learning Sciences, or a selective combination of both during their undergraduate and graduate studies.

Students admitted to the program must maintain a 3.0 grade point average. A one-quarter grace period to bring a lower grade point average up to 3.0 will be granted.

### Honors Program in Engineering and Journalism

The Honors Program in Engineering and Journalism is intended to prepare exceptional students for communications careers emphasizing engineering, science, and technology. This joint program involves completing a McCormick bachelor's degree and then a Medill School of Journalism master's degree. It normally requires five years of study, but unusually capable students may be able to shorten the time through use of advanced placement credits and accelerated scheduling. To be considered for the program, applicants to Northwestern complete an additional questionnaire that is evaluated by a Medill faculty panel. Students are evaluated by the faculty during the program to verify that performance is satisfactory. Part of the engineering humanities requirements must be fulfilled with Medill courses EDIT 201 Editing and Writing the News and 202 History and Issues of Journalism.

#### Honors Program in Engineering and Law

A law degree built upon an engineering undergraduate education is unusually valuable for a host of careers, such as those in technology-intensive businesses or in intellectual property, including patents. The Honors Program in Engineering and Law combines a Northwestern engineering degree, on-the-job work through the co-op program, and provisional admission to Northwestern University School of Law. The undergraduate portion takes four years, including five academic quarters of co-op work. Students must maintain a 3.25 undergraduate GPA. They take the LSAT at the beginning of their junior year and are expected to score at or above the median of the previous year's entering law class. Their admission to the law school is reviewed late in the junior year.

#### Undergraduate Leadership Program

The Undergraduate Leadership Program, an interschool certificate program open to all undergraduates, helps students understand the nature of leadership and prepares them to become leaders. (See Undergraduate Leadership Program in the Other Undergraduate Programs section of this catalog.)

## **Student Resources**

## **Tutorial Program**

McCormick conducts a program of guided study and tutorial help for freshmen and sophomores in all the required courses in mathematics, chemistry, physics, and engineering. This program encourages out-ofclass work and good study habits and helps provide a full understanding of the early courses that are the foundation for much that is to follow. The aim is not to displace students in their learning efforts but to provide explanations to bridge the uncertain or unknown and lead to depth of understanding.

#### **Faculty Advisers**

During the first year, students are assigned a freshman adviser. At the beginning of the sophomore year, most students will have selected a major field of study and will be reassigned an adviser in that area. The adviser assists in planning the program of study, but students retain the responsibility of meeting overall graduation requirements. Curricular and other advice may be obtained from the school by addressing an e-mail request to mccormick-school@northwestern.edu.

#### **Counseling Office**

McCormick employs professional counselors to give students educational, vocational, academic, and personal counseling. Students may arrange to have interest testing through the Counseling Office. Vocational materials relating to engineering are available.

## **Organizations for Engineering Students**

The Northwestern Engineering Student Council is composed of representatives from each class in engineering and from approved McCormick organizations. It is the recognized representative body of undergraduate engineering students and as such serves as a link between the students and faculty and administration. It encourages and coordinates the activities of engineering students and student groups.

The McCormick Undergraduate Research Board is organized to stimulate undergraduate research and to provide financial support for projects begun by individual students.

The following professional societies have established student branches on the campus: American Institute of Chemical Engineers American Institute of Industrial Engineers American Society of Civil Engineers American Society of Mechanical Engineers ASM International **Biomedical Engineering Society** Institute of Electrical and Electronics Engineers Institute of Electrical and Electronics Engineers (computer subchapter) Institute of Electrical and Electronics Engineers (engineering in medicine and biology subchapter) Materials Research Society National Society of Black Engineers Society of Automotive Engineers Society of Hispanic Professional Engineers Society of Manufacturing Engineers Society of Women Engineers The following honorary societies recognize highachieving McCormick undergraduates: Eta Kappa Nu: open to upperclass students in electrical engineering who demonstrate superior

scholarship and ability

Kappa Theta Epsilon: cooperative engineering education honorary society

Omega Chi Epsilon: for upperclass students in chemical engineering who demonstrate superior scholarship and leadership ability

- Phi Eta Sigma: for freshmen who earn a scholastic average equivalent to a grade of A
- Phi Lambda Upsilon: open to upperclass students in chemistry and chemical engineering who demonstrate superior scholarship and academic ability
- Pi Tau Sigma: for upperclass students in mechanical engineering who demonstrate superior scholarship and leadership ability
- Sigma Xi Society: eligibility for associate membership for seniors who excel in scholarship in at least two departments
- Tau Beta Pi: for upperclass students who have shown superiority in scholarship and ability in engineering work

## Undergraduate Programs of Study

#### **McCormick Curriculum Requirements**

All curricula leading to the bachelor of science degree in engineering or applied science must have the same basic components — mathematics, engineering analysis and computer proficiency, basic sciences, design and communications, basic engineering, social sciences/humanities, unrestricted electives, and major program.

The abbreviations used for McCormick departments and curricula in the listings that follow are BME (biomedical engineering) CHEM ENG (chemical engineering) CIV ENG (civil engineering) COMP SCI (computer science) ECE (electrical and computer engineering) ES APPM (engineering sciences and applied mathematics) ENV ENG (environmental engineering) GEN ENG (general engineering) IEMS (industrial engineering and management sciences) MAT SCI (materials science and engineering) MECH ENG (mechanical engineering)

## Mathematics (4 courses)

MATH 214-1,2,3 Calculus MATH 215 Multiple Integration and Vector Calculus

# Engineering Analysis and Computer Proficiency (4 courses)

GEN ENG 205-1,2,3,4 Engineering Analysis (ES APPM 252-3 may replace GEN ENG 205-4)

## **Basic Sciences (4 courses)**

4 courses in at least two of the four areas below, but not more than 3 in one area and not more than 2 from earth sciences:

- Physics
- PHYSICS 135-2,3 General Physics
- PHYSICS 335 Modern Physics for Nonmajors
  Biological sciences
  BIOL SCI 210-1 Genetics and Evolutionary Biology
  BIOL SCI 210-2 Biochemistry and Molecular Biology
- BIOL SCI 210-2 Biolennistry and Molecular Biology BIOL SCI 210-3 Physiology and Cell Biology BME 201 Biology for Engineers
- Chemistry
- CHEM 101 General Chemistry CHEM 102 General Inorganic Chemistry CHEM 103 General Physical Chemistry CHEM 171 Accelerated General Inorganic Chemistry CHEM 172 Accelerated General Physical Chemistry CHEM 210-1,2 Organic Chemistry
- Earth sciences/astronomy GEOL SCI 201 Surface Processes GEOL SCI 202 Earth's Interior ASTRON 220 Highlights of Astrophysics

#### Design and Communications (3 courses)

- Writing and design GEN ENG 106-1,2 Engineering Design and Communication
- Speaking, 1 course from GEN SPCH 101 Interpersonal Communication GEN SPCH 102 Public Speaking GEN SPCH 103 Analysis and Performance of Literature Higher-level courses may satisfy this requirement; they are approved on an individual basis.

#### **Basic Engineering (5 courses)**

5 courses from at least four of the following eight areas:

 Thermodynamics CHEM 342-1 Thermodynamics May be taken alone or as prerequisite to CHEM ENG 211. CHEM ENG 211 Thermodynamics CHEM 342-1 is prerequisite. MECH ENG 220 Thermodynamics I May not be taken with CHEM 342-1 or CHEM ENG 211. MECH ENG 370 Thermodynamics II MAT SCI 314 Thermodynamics of Materials MAT SCI 315 Phase Equilibria and Diffusion in Materials · Fluids and solids BME 270 Introduction to Biomedical Fluid Mechanics CHEM ENG 321 Fluid Mechanics CIV ENG 216 Mechanics of Materials I CIV ENG 219 Continuum Mechanics I MECH ENG 241 Fluid Mechanics I MECH ENG 262 Stress Analysis and Finite Elements I

- Materials science
- MAT SCI 201 Principles of the Properties of Materials or MAT SCI 203 Microstructure and Engineering Properties of Materials or MAT SCI 301 Chemical Aspects of Engineering
- Materials
- Electrical science
- ECE 202 Introduction to Electrical Engineering
- ECE 221 Fundamentals of Circuits
- ECE 222 Fundamentals of Signals and Systems
- ECE 223 Fundamentals of Solid-State Engineering
- ECE 224 Fundamentals of Electromagnetics and Photonics
- ECE 270 Applications of Electronic Devices
- BME 221 Analysis and Simulation of Biological Systems • Systems engineering and analysis
- CHEM ENG 210 Analysis of Chemical Process Systems IEMS 310 Operations Research (may not be taken with IEMS 313 or 315)
- IEMS 326 Economics and Finance for Engineers • Computer engineering
- ECE 203 Introduction to Computer Engineering ECE 205 Fundamentals of Computer Systems Software ECE 230 Programming for Computer Engineers ECE 328 Numerical Methods for Engineers
- Computer science
- COMP SCI 211 Fundamentals of Computer Programming II COMP SCI 317 Data Management and Information Processing
- Probability, statistics, and quality control BME 220 Introduction to Biomedical Statistics CIV ENG 306 Uncertainty Analysis in Civil Engineering ECE 302 Probabilistic Systems and Random Signals IEMS 201 Introduction to Statistics IEMS 202 Probability IEMS 303 Statistics I MECH ENG 359 Reliability Engineering

#### Social Sciences/Humanities (7 courses)

7 courses, which must be approved in advance by the McCormick Humanities Panel, chosen according to one of two options in the following three areas: Social and behavioral sciences Historical studies and values Fine arts, language, and literature

- Option A: At least 2 courses must be chosen in each area. Only 3 may be 100-level introductory courses; 3 must be thematically related to provide depth.
- Option B: 5 of the 7 courses must be clearly thematically related. For breadth, no more than 5 courses may come from a single area.

#### Unrestricted Electives (5 courses)

Students may take any credit course in the University to explore or extend technical or nontechnical interests.

#### Major Program (16 courses)

Any program of study finds its depth or concentration in the 16 courses given to the major program of the curriculum. Each engineering curriculum provides considerable elective opportunity within these courses. The intent is to provide opportunity for individualization, but coherence in the selection of elective courses is still necessary. In accredited programs, the understanding is that certain criteria will be met, and guidance to this end is essential. Accordingly, it is required that a plan of study listing intended selections be submitted for approval by the end of the eighth quarter of study (winter quarter of junior year).

Most curricula offer suggested areas of specialization or options that provide excellent guidance in using electives. These course plans are available in the department or program offices or the McCormick Records Office and can be the basis for course planning. Alternately, self-designed plans may be submitted, but they should be worked out in consultation with a faculty adviser.

## **Department Curricula**

Students must meet not only McCormick curriculum requirements but also the specific requirements for the department curriculum being pursued. The following listings of these curricula present additional information or specifics to be used with the basic curriculum.

Some of the listed curricula contain specializations or options within the curriculum. These are for advice and guidance for elective course choice. For further details about the options or specializations within a particular program, consult with the department coordinator sponsoring that curriculum, check with McCormick's Records Office, or see the school's Web page at www.tech.northwestern.edu.

#### **Applied Mathematics Curriculum**

Total requirements — 48 courses

Mathematics — 4 courses MATH 214-1,2,3; MATH 215

Engineering analysis and computer proficiency — 4 courses

GEN ENG 205-1,2,3,4

**Basic sciences** — 4 courses PHYSICS 135-2,3; 2 courses in chemistry, biological sciences, and/or earth sciences

**Design and communications** — 3 courses

Basic engineering — 5 courses

5 courses from at least four of the following areas: systems engineering and analysis, mechanics, thermodynamics, fluids and solids, materials science, electrical science, computer science, and computer engineering

Social sciences/humanities — 7 courses

Unrestricted electives — 5 courses

#### Major program — 16 courses

 Required courses — 7 courses
 ES APPM 311-1,2 Methods of Applied Mathematics
 ES APPM 311-3 Methods of Applied Mathematics: Complex Variables 149

- 3 courses chosen from the following:
- ES APPM 322 Applied Dynamical Systems
- ES APPM 346 Modeling and Computation in
- Science and Engineering
- ES APPM 399 Projects
- ES APPM 421-1,2,3 Models in Applied Mathematics
- Additional courses 3 courses from the following areas, at least 1 in linear algebra and 1 in probability (suggested courses listed):
  - Linear algebra: MATH 334
  - Numerical analysis: ECE 328, 470, 471; ES APPM 446-1,2
  - Probability: IEMS 202; IEMS 303 or MATH 330-1,2,3 or ECE 302
- Engineering or the sciences 4 courses leading to an in-depth understanding of an area of application (300-level or higher)
- Technical electives 2 courses at the 300 level or higher in engineering, science, or mathematics.

## **Biomedical Engineering Curriculum**

Total requirements — 48 courses

Mathematics — 4 courses MATH 214-1,2,3; MATH 215

Engineering analysis and computer proficiency — 4 courses

GEN ENG 205-1,2,3,4

**Basic sciences** — 4 courses

PHYSICS 135-2; CHEM 101, 102, and 103 *or* CHEM 171, 172, and 1 more basic science course other than CHEM 101 and BME 201

**Design and communications** — 3 courses

Basic engineering — 5 courses from the following six areas, no more than 1 course per area:
Thermodynamics: CHEM 342-1 or MECH ENG 220
Fluids and solids: BME 270, CIV ENG 216, CHEM ENG 321, or MECH ENG 241
Materials science: MAT SCI 201 or 301
Electrical science: ECE 202, 270, or BME 221
Computer engineering: ECE 203 or 328
Probability, statistics, and quality control: BME 220, ECE 302, IEMS 201, IEMS 303, or MECH ENG 359
Social sciences/humanities — 7 courses
Unrestricted electives — 5 courses

**Major program** — 16 courses at the 200 level or higher, none of which may be taken P/N

Core — 7 courses CHEM 210-1,2 Organic Chemistry BIOL SCI 210-2 Biochemistry and Molecular Biology 2 quarters of BME 301, 302, 303 Systems Physiology or physiology in the Medical School BME 308 Biomedical Engineering Laboratory BME 390 Biomedical Engineering Design

 Areas of specialization — 9 courses Students complete a course of study by selecting one of five specializations listed below or by developing an alternate set of courses with their advisers that is subsequently approved by the Biomedical Engineering Undergraduate Committee. The specialization provides depth in one area of biomedical engineering. Specific course requirements are provided when students enter the department or may be obtained from the department office. Biomedical signals and images Biotechnology Electronic instrumentation Mechanics Transport processes

## **Chemical Engineering Curriculum**

**Total requirements** — 48 courses

**Mathematics** — 4 courses MATH 214-1,2,3; MATH 215

Engineering analysis and computer proficiency — 4 courses GEN ENG 205-1,2,3,4

**Basic sciences** — 4 courses PHYSICS 135-2,3; CHEM 102 and 103 or 171 and 172 CHEM 101, the prerequisite for CHEM 102, must be taken as an unrestricted elective.

**Design and communications** — 3 courses

Basic engineering — 5 courses Thermodynamics: CHEM 342-1, CHEM ENG 211 Fluids and solids: CHEM ENG 321 Materials science: MAT SCI 301 Systems engineering analysis: CHEM ENG 210

Social sciences/humanities — 7 courses

## Unrestricted electives — 5 courses

Major program — 16 courses
Required courses — 11 courses
CHEM 210-1,2 Organic Chemistry
CHEM 343 Kinetics and Spectroscopy
CHEM ENG 212 Equilibrium Separations
CHEM ENG 307 Kinetics and Reactor Engineering
CHEM ENG 322 Heat Transfer
CHEM ENG 323 Mass Transfer
CHEM ENG 341 Process Dynamics and Control
CHEM ENG 342 Chemical Engineering Laboratory

CHEM ENG 351 Process Economics, Design, and Evaluation

CHEM ENG 352 Chemical Engineering Design Projects • Advanced science electives — 2 courses

- 1 approved 200- or 300-level biological sciences, chemistry, materials science, or physics course; 1 200- or 300level chemistry course or equivalent (e.g., CHEM ENG 361 Introduction to Polymers)
- Areas of specialization 3 courses

The remaining 3 courses are chosen from advanced engineering, mathematics, or science courses. They should be selected to fulfill one of the seven areas of specialization offered by the Department of Chemical Engineering and listed below. Students may select one of these programs or petition the chemical engineering faculty for approval of other course selections in accordance with the overall departmental major program. Biomedical engineering Biotechnology Chemical process engineering Environmental engineering General chemical engineering Polymer science and engineering Process control and simulation

#### **Civil Engineering Curriculum**

Total requirements — 48 courses Mathematics — 4 courses

MATH 214-1,2,3; MATH 215

**Engineering analysis and computer proficiency** — 4 courses

GEN ENG 205-1,2,3,4

Basic sciences — 4 courses PHYSICS 135-2; CHEM 101, 102; CHEM 103 or PHYSICS 135-3

#### Design and communications — 3 courses

**Basic engineering** — 5 courses Fluids and solids: CIV ENG 216 and MECH ENG 241 Thermodynamics: 1 course Electrical science: 1 course MAT SCI 203 or 1 other course from systems engineering and analysis, computer science, or materials science

Social sciences/humanities — 7 courses

Unrestricted electives — 5 courses

Major program — 16 courses
10 must be civil engineering courses.
Basic civil engineering — 6 courses
CIV ENG 221 Theory of Structures I

- CIV ENG 222 Theory of Structures 1 CIV ENG 222 Structural Steel Design
- CIV ENG 250 Introductory Soil Mechanics

CIV ENG 260 Fundamentals of Environmental

Engineering

CIV ENG 340 Fluid Mechanics II

CIV ENG 371 Introduction to Transportation Planning and Analysis or 376 Transportation System Operations

- Mathematical techniques and science 2 courses from an approved list
- Technical electives 8 courses at the 200 level or higher in mathematics, science, engineering, or other area supporting student's specialty; 2 of the 8 must be from an approved list of design and synthesis courses.
- Areas of specialization: Listed below are samples of some traditional areas of specialization, but students are encouraged with the help of their advisers to design a program that meets their own particular interests. Applied mechanics Construction Environmental engineering

Geotechnical engineering Structural engineering

Transportation systems

#### **Computer Engineering Curriculum**

**Total requirements** — 48 courses

**Mathematics** — 4 courses MATH 214-1,2,3, MATH 215

Engineering analysis and computer proficiency — 4 courses GEN ENG 205-1,2,3,4

**Basic sciences** — 4 courses

PHYSICS 135-2,3; 2 courses from chemistry, biological sciences, or earth sciences

#### Design and communications — 3 courses

**Basic engineering** — 5 courses Probability, statistics and quality control: ECE 302 Electrical science: ECE 202 (grade of C- or better required for graduation) Computer engineering: ECE 203 (grade of C- or better required for graduation) and 230 1 course from thermodynamics, fluids and solids, systems engineering and analysis, or materials science

Social sciences/humanities - 7 courses

Unrestricted electives — 5 courses

Major program — 16 courses

- Required courses 5 courses ECE 205 Fundamentals of Computer System Software ECE 303 Advanced Digital Logic Design ECE 361 Computer Architecture COMP SCI 311 Data Structures and Data Management COMP SCI 343 Operating Systems
- Technical electives 10 courses Technical electives may be used to tailor a program to a particular area of specialization. Students must take at least 5 courses from the following four tracks and 2 courses from the fundamental electrical engineering courses listed below. The remaining 3 electives may be chosen from any 300-level technical courses from science, mathematics, computer science, or engineering. No more than 2 units of 399 will be counted as technical electives.

Additional units of 399 may be taken but will be counted as unrestricted electives. High-performance computing track ECE 328 Numerical Methods for Engineers ECE 333 Introduction to Communication Networks ECE 358 Introduction to Parallel Computing ECE 362 Computer Architecture Projects VLSI and CAD track ECE 353 Digital Microelectronics ECE 357 Introduction to VLSI CAD ECE 391 VLSI Systems Design ECE 392 VLSI Systems Design Projects Embedded systems track ECE 332 Digital Image Analysis ECE 346 Microprocessor System Design ECE 347 Microprocessor System Projects ECE 390 Introduction to Robotics BME 384 Biomedical Computing Software track COMP SCI 310 Mathematical Foundations of Computer Science COMP SCI 322 Compiler Construction COMP SCI 336 Design and Analysis of Algorithms COMP SCI 394 Software Project Management and Development Fundamental electrical engineering courses ECE 221 Fundamentals of Circuits ECE 222 Fundamentals of Signals and Systems ECE 223 Fundamentals of Solid-State Engineering ECE 224 Fundamentals of Electromagnetics and Photonics ECE 225 Fundamentals of Electronics • Design requirement — 1 course chosen from ECE 347 Microprocessor System Projects ECE 362 Computer Architecture Projects

151

## **Computer Science Curriculum**

Total requirements — 48 courses

ECE 392 VLSI Systems Design Projects

Mathematics — 4 courses

MATH 214-1,2,3

1 course from computer science mathematics list (available from the department)

**Engineering analysis and computer proficiency** — 4 courses

GEN ENG 205-1,2,3; COMP SCI 111

Basic sciences — 4 courses

**Design and communications** — 3 courses

**Basic engineering** — 5 courses, including

Computer science: COMP SCI 211

Probability, statistics, and quality control: 1 course 3 other courses chosen from the basic engineering list, excluding computer science courses

excluding computer science courses

Social sciences/humanities — 7 courses

#### Unrestricted electives — 5 courses

Major program — 16 courses

- Required courses 8 courses
- COMP SCI 311 Data Structure and Data Management 7 courses from the advanced computer science list available on the department Web site
- Technical electives 8 courses

4 courses from the advanced computer science list; 2 from the computer science mathematics list, the computer science external technical electives list, or the advanced computer science list (the lists are available on the department Web site); 2 unrestricted electives approved by the department adviser

Project work

The courses above must be chosen to include 2 quarters of project work, resulting in the construction and demonstration of a proposed solution to some organization's problem. Projects must be approved by a faculty adviser beforehand. Project work will typically occur in independent study projects (COMP SCI 399) or in projectoriented courses (e.g., COMP SCI 394).

Courses at the 400 level are primarily for graduate students but may be open to advanced undergraduate students with the consent of the instructor. COMP SCI 110 may be used as an unrestricted technical elective if taken before COMP SCI 111. Technical electives may not satisfy other requirements.

#### **Electrical Engineering Curriculum**

Total requirements — 48 courses

Mathematics — 4 courses MATH 214-1,2,3; MATH 215

 ${\it Engineering analysis and computer proficiency-}$ 

4 courses GEN ENG 205-1,2,3,4

**Basic sciences** — 4 courses PHYSICS 135-2,3; 2 additional basic science courses

**Design and communications** — 3 courses

## Basic engineering — 5 courses

Electrical science: ECE 202 (grade of C- or better required for graduation) Computer engineering: ECE 203 (grade of C- or better required for graduation) and 230 Probability, statistics, and quality control: ECE 302 1 other course from the basic engineering list, excluding computer science courses Social sciences/humanities — 7 courses

#### Social sciences/numanities — / course

## Unrestricted electives — 5 courses

Major program — 16 courses
Required courses — 5 courses
ECE 221 Fundamentals of Circuits
ECE 222 Fundamentals of Signals and Systems
ECE 223 Fundamentals of Solid-State Engineering

ECE 224 Fundamentals of Electromagnetics and Photonics

ECE 225 Fundamentals of Electronics

• Technical electives — 10 courses

Technical electives may be used to tailor a program to a particular area of specialization. Students must take at least 6 courses chosen from the following six tracks and 2 courses from 300-level ECE technical electives (which may include the courses below). The remaining 2 electives may be 300-level technical courses from science, mathematics, computer science, or engineering courses and may include the courses below. No more than 2 units of 399 will be counted as technical electives. Additional units of 399 may be taken but will be counted as unrestricted electives.

Circuits and electronics track

ECE 303 Advanced Digital Logic Design ECE 346 Microprocessor System Design ECE 353 Digital Microelectronics

ECE 391 VLSI Systems Design

Communications systems track

ECE 307 Communications Systems

ECE 333 Introduction to Communications Networks

ECE 378 Digital Communications

ECE 380 Wireless Communications

Control systems track

ECE 360 Introduction to Feedback Systems ECE 374 Introduction to Digital Control

ECE 390 Introduction to Robotics

Digital signal processing track

ECE 332 Digital Image Analysis

ECE 359 Digital Signal Processing

ECE 363 Digital Filtering ECE 365 Communication Filters

Electromagnetics and optics track

ECE 308 Advanced Electromagnetics and Photonics

ECE 379 Lasers and Coherent Optics

ECE 382 Photonic Information Processing

ECE 383 Fiber-Optic Communications

ECE 386 Computational Electromagnetics and Photonics

Solid-state engineering track

ECE 115 The Electron in the 21st Century

ECE 250 Physical Electronics and Devices

ECE 381 Electronic Properties of Materials

ECE 384 Solid-State Electronic Devices

ECE 385 Optoelectronics

ECE 388 Microelectronic Technology

• Design requirement — 1 course chosen from

ECE 347 Microprocessor Systems Projects

ECE 392 VLSI Systems Design Projects

ECE 398 Electrical Engineering Design

ECE 399 Projects (when 399 is a design project)

#### **Engineering Science Curriculum**

Total requirements — 48 courses Mathematics — 4 courses

MATH 214-1,2,3; MATH 215

Engineering analysis and computer proficiency -4 courses

GEN ENG 205-1,2,3,4 Basic sciences — 4 courses PHYSICS 135-2,3; any 2 from CHEM 101, 102,

BIOL SCI 210-1,2

**Design and communications** — 3 courses

**Basic engineering** — 5 courses Thermodynamics: CHEM ENG 211 or MECH ENG 220 Fluids and solids: CIV ENG 216 and MECH ENG 241 or BME 270

Materials science: MAT SCI 201 Electrical science: ECE 224

Social sciences/humanities — 7 courses

## Unrestricted electives — 5 courses

Major program — 16 courses

• Required courses — 7 courses ES APPM 311-1,2 Methods of Applied Mathematics 3 courses from ES APPM 322 Applied Dynamical Systems, ES APPM 399 Projects, and ES APPM 421-1,2,3 Models in Applied Mathematics

IEMS 201 Introduction to Statistics and 202 Probability or MATH 330-1,2 Probability and Statistics

 Areas of specialization — 9 courses Chosen from 300- and 400-level offerings in engineering, science, or mathematics. Some part of the selection should constitute an area of specialization. Consent of the departmental adviser is required.

## Environmental Engineering Curriculum

Total requirements — 48 courses Mathematics — 4 courses

MATH 214-1,2,3; MATH 215

Engineering analysis and computer proficiency — 4 courses GEN ENG 205-1,2,3,4 Basic sciences — 4 courses PHYSICS 135-2; CHEM 101, 102, 103

## **Design and communications** — 3 courses

**Basic engineering** — 5 courses

Thermodynamics: CHEM 342-1

Fluids and solids: MECH ENG 241

Electrical science or materials science: 1 course

Probability, statistics, and quality control: 1 course

(CIV ENG 306 recommended) Systems engineering and analysis: IEMS 326

Social sciences/humanities — 7 courses

Unrestricted electives — 5 courses

Major program — 16 courses

• Core — 12 courses CHEM 210-1 Organic Chemistry CIV ENG 260 Fundamentals of Environmental Engineering CIV ENG 261 Environmental Engineering Analysis CIV ENG 267 Chemistry of the Natural Environment CIV ENG 340 Fluid Mechanics II CIV ENG 360 Environmental Impact Evaluation CIV ENG 361 Public Health Engineering CIV ENG 363 Community Air Pollution CIV ENG 364 Sanitary Engineering CIV ENG 366 Ecosystems and Ecotoxicology CIV ENG 367 Aquatic Chemistry CIV ENG 370 Environmental Engineering Design

153

• Technical electives — 4 courses 2 courses from approved list 2 courses, 200-level or higher, in engineering or Weinberg College mathematics or science

#### Industrial Engineering Curriculum

Total requirements — 48 courses

Mathematics — 4 courses MATH 214-1,2,3; MATH 215

Engineering analysis and computer proficiency — 4 courses

GEN ENG 205-1,2,3,4

**Basic sciences** — 4 courses

PHYSICS 135-2; CHEM 101, 102, 103 or PHYSICS 135-3 and 2 other courses

**Design and communications** — 3 courses

**Basic engineering** — 5 courses

COMP SCI 317 or ECE 328; ECE 230; IEMS 326; and 2 other courses

Social sciences/humanities — 7 courses

Unrestricted electives — 5 courses

Major program — 16 courses

- Probability and statistics 2 courses **IEMS 202** Probability IEMS 303 Statistics I
- Operations research 3 courses IEMS 313 Deterministic Models and Optimization IEMS 315 Stochastic Models and Simulation IEMS 317 Discrete-Event Systems Simulation
- Applied behavioral science 1 course IEMS 340 Field Project Methods
- Senior design project 2 courses IEMS 390-1,2 Systems Project Management I, II or IEMS 391-1,2 Industrial Engineering Design Project I, II
- Electives 8 courses

3 methodology courses; 3 applications courses; and any 2 200-level or higher engineering or Weinberg College mathematics, science, statistics, or economics courses

(P/N is permitted only in the last group). At least 6 must be engineering courses and 4 must be IEMS courses. No more than 2 units of 399 may be taken, and no 399 course will be counted toward the 4 IEMS course requirements. Students must receive at least 2 quarters of engineering design experience through the electives. A list of electives can be found on the department Web site.

Manufacturing Engineering Curriculum

**Total requirements** — 48 courses **Mathematics** — 4 courses

MATH 214-1,2,3; MATH 215

Engineering analysis and computer proficiency — 4 courses GEN ENG 205-1,2,3,4

**Basic sciences** — 4 courses PHYSICS 135-2,3; 2 chemistry courses

**Design and communications** — 3 courses

**Basic engineering** — 5 courses Thermodynamics: MECH ENG 220 recommended Materials science: MAT SCI 201 recommended Systems analysis: IEMS 310 and IEMS 326 1 electrical science or computer engineering course

Social sciences/humanities — 7 courses

Unrestricted electives — 5 courses

Major program — 16 courses

• Core — 10 courses Computer programming: COMP SCI 110 or ECE 230 CIV ENG 216 Mechanics of Materials I COMP SCI 317 Data Management and Information

Processing or IEMS 344 Information Technology in Manufacturing

IEMS 201 Introduction to Statistics or IEMS 303 Statistics I IEMS 305 Statistical Methods for Quality Improvement or IEMS 307 Quality Improvement by Experimental Design

IEMS 382 Production Planning and Scheduling

MAT SCI 317 Materials in Manufacturing

MECH ENG 240 Introduction to Mechanical Design and Manufacturing

MECH ENG 340-1 Computer-Integrated Manufacturing MECH ENG 340-2 or -3 Computer-Integrated Manufacturing

• Senior design project — 2 courses

IEMS 391-1,2 Industrial Engineering Design Project I, II or MECH ENG 398 Engineering Design and one of the following: MECH ENG 340-2 Computer-Integrated Manufacturing, MECH ENG 366 Finite Elements for Design and Optimization, MECH ENG 399 Projects

or ECE 399 Projects and one of the following:
 ECE 347 Microprocessor System Projects, ECE 362
 Computer Architecture Projects, ECE 392 VLSI
 Systems Design Projects, ECE 398 Electrical
 Engineering Design

• Technical electives — 4 courses from the approved list, updated annually by the manufacturing engineering curriculum committee

## Materials Science and Engineering Curriculum

**Total requirements** — 48 courses **Mathematics** — 4 courses MATH 214-1,2,3; MATH 215

**Engineering analysis and computer proficiency** — 4 courses

GEN ENG 205-1,2,3,4

**Basic sciences** — 4 courses

PHYSICS 135-2,3; CHEM 102 and 103 *or* 171 and 172 **Design and communications** — 3 courses

Design and communications — 9 course.

**Basic engineering** — 5 courses, including Fluids and solids: CIV ENG 216 or 219 Thermodynamics: MAT SCI 314 and 315 Materials science: MAT SCI 201 Elective: selected from electrical science, systems engineering and analysis (IEMS 326 recommended), computer science, or computer engineering

Social sciences/humanities — 7 courses

**Unrestricted electives** — 5 courses MAT SCI 190 recommended

Major program — 16 courses

• Required courses — 11 courses

- MAT SCI 316-1,2 Microstructural Dynamics
- MAT SCI 331 Physical Properties of Polymers

MAT SCI 332 Mechanical Behavior of Solids

MAT SCI 351-1,2 Introductory Physics of Materials

MAT SCI 361 Crystallography and Diffraction

MAT SCI 390 Materials Design

MAT SCI 391 Process Design

MAT SCI 396-1,2 Senior Project in Materials Science and Engineering

• Technical electives — 5 courses

Each student must choose the remaining courses in a consistent manner to fulfill an area of concentration. These courses may be in engineering, natural sciences (usually chemistry or physics), and mathematics. At least 2 of the 5 courses must be from materials science and engineering. No more than 2 of the 5 courses may be 200-level courses. Strongly recommended are advanced mathematics courses such as MATH 305 Complex Variables for Applications, ES APPM 311-1,2 Methods of Applied Mathematics; Complex Variables.

Examples of programs for concentrations in biomaterials, electronic materials, metals and ceramics, nanomaterials, polymeric materials, and surface science are described in a departmental manual for majors.

#### Mechanical Engineering Curriculum

**Total requirements** — 48 courses **Mathematics** — 4 courses MATH 214-1,2,3; MATH 215

MAI II 217-1,2,3; MAI II 213

Engineering analysis and computer proficiency — 4 courses GEN ENG 205-1,2,3,4 Basic sciences — 4 courses

PHYSICS 135-2,3; 2 chemistry courses

#### Design and communications — 3 courses

Basic engineering — 5 courses
Thermodynamics: MECH ENG 220
Fluids and solids: MECH ENG 241; CIV ENG 216 or MECH ENG 262
Materials science: MAT SCI 201
Electrical science: ECE 270 (students planning to take advanced ECE courses may substitute ECE 221)

Social sciences/humanities — 7 courses

Unrestricted electives — 5 courses

Major program — 16 courses • Required courses — 6 courses MECH ENG 202 Mechanics II MECH ENG 224 Experimental Engineering I MECH ENG 240 Introduction to Mechanical Design and Manufacturing MECH ENG 315 Theory of Machines - Design of Elements MECH ENG 377 Heat Transfer MECH ENG 390 Introduction to Dynamic Systems Mechanical engineering advanced study — 5 courses, at least one from each group: Dynamics/controls MECH ENG 314 Theory of Machines - Dynamics MECH ENG 363 Mechanical Vibrations MECH ENG 391 Fundamentals of Control Systems I ECE 360 Introduction to Feedback Systems Manufacturing MECH ENG 340-1,3 Computer-Integrated Manufacturing Mechanics MECH ENG 362 Stress Analysis MECH ENG 365 Finite Elements for Stress Analysis Thermofluid science MECH ENG 370 Thermodynamics II MECH ENG 373 Engineering Fluid Mechanics • Electives - 5 courses, including at least one design course General electives 2 300-level mechanical engineering courses 2 300-level technical electives 1 design course from the following: MECH ENG 340-2 Computer-Integrated Manufacturing MECH ENG 366 Finite Elements for Design and Optimization

MECH ENG 398 Engineering Design

Electives are also available in biomedical engineering, energy, intelligent mechanical systems, manufacturing, solid mechanics, nanotechnology/microelectromechanical systems, and design. Approved courses may be found in a listing available from the department office.

155

#### **Combined Studies Program**

For students whose particular interests and goals cannot be satisfied by one of the regular programs of study in engineering or applied science, the Combined Studies Program provides an alternative. If endorsed and guided by three faculty members and approved by McCormick's Curriculum Committee, an ad hoc curriculum leading to the bachelor of science degree may be pursued.

Available courses may be combined in a variety of interdisciplinary plans as long as the all-school specification of eight basic components is met. Some examples of combined studies programs entered into in recent years include such titles as public health, engineering physics, biomedical engineering and molecular biology, and computers and mechanical design.

Students interested in the Combined Studies Program should consult with the associate dean for undergraduate engineering.

## **General Engineering Courses**

**GEN ENG 106-1,2 Engineering Design and Communication** Integrated introduction to the engineering design process and technical communication. Approaches to unstructured and poorly defined problems; conceptual and detailed design; team structure and teamwork; project planning; written, oral, graphical, and interpersonal communications; use of software tools; discussion of societal

and business issues. One lecture, two workshops, lab. Registration for both quarters required. Primarily intended for freshmen.

**GEN ENG 190-0 Engineering Freshman Seminar** Subjects of current interest in broad engineering or interdisciplinary areas.

**GEN ENG 191-0 MEOP Complete Seminar** Issues unique to minority engineering students. Working in groups, achieving one's full potential, succeeding in class, increasing involvements with faculty and in their research. Primarily intended for freshmen.

**GEN ENG 205-1,2,3,4 Engineering Analysis 1.** Introduction to linear algebra from computational, mathematical, and applications viewpoints. Computational methods using a higher-level software package such as Matlab. **2.** Linear algebra and introduction to vector methods in engineering analysis. Statics and dynamics of rigid bodies and matrix analysis of trusses and networks. Engineering design problems. Prerequisites: C- or better in 205-1; MATH 214-1. **3.** Dynamic behavior of the elements. Modeling of mechanical (both translational and rotational), electrical,

thermal, hydraulic, and chemical systems composed of those elements. Prerequisite: C- or better in 205-2.
4. Solution methods for ordinary differential equations, including exact, numerical, and qualitative methods. Applications and modeling principles; solution techniques. Prerequisites: C- or better in 205-2; MATH 214-2.

#### **GEN ENG 220-0 Analytic and Computer Graphics**

Microcomputer-aided drawing (CAD) for graphical threedimensional problem solving and presentation.

## **Biomedical Engineering**

Biomedical engineers solve problems in the life sciences and clinical medicine by applying engineering and mathematical techniques. This approach has been fruitful where a descriptive approach is no longer adequate for studying complex systems involved in the body's transport, regulation, and information processing. Equally important has been the development of devices used inside or outside the body to replace or supplement physiological functions and to enhance the quality of diagnosis and care. Thus, biomedical engineering refers to the application of engineering techniques to problems in medicine and biology.

The interplay among the physical sciences, engineering, biology, and the medical sciences takes many forms. The traditional study of complex systems, whether for power transmission, communications, or the operation and control of industrial processes, has provided engineers with a number of concepts and techniques that proved valuable in analysis and design. These principles expressed in mathematical form are applicable to a wide range of phenomena, including those in biological processes. Information theory, statistics, and computer technology have opened new areas for exploration of sensory and central nervous activity as well as patient handling and diagnosis. Theories for feedback controls, transport processes, materials science, and mechanics provide new insight into homeostatic physiological processes. Analysis of heat transfer, fluid flow, and chemical-process control in living organisms requires competence in both engineering and the life sciences. Current studies help provide understanding of many physiological processes. This understanding, in turn, leads to improvements in clinical practice, diagnosis, and patient care.

#### **Undergraduate Program**

Northwestern was among the first schools to recognize the value of a biomedical engineering background, and today the Department of Biomedical Engineering offers, at both the undergraduate and graduate levels, one of the largest and broadest programs in the country. The primary path interested students may follow is the biomedical engineering program administered by the biomedical engineering department. Alternative curricula are the biomedical options in other engineering departments.

The biomedical engineering program provides biomedical training that is quantitative, emphasizes problem solving, and treats phenomena from the molecular to the systems levels. This curriculum prepares students for careers in dentistry, medicine, and/or research or with corporations in the health care industry. Required courses in mathematics, engineering, and science establish a strong foundation on which to build a biomedical framework. In addition, each student selects one sequence of courses with which to develop an area of specialization.

#### Areas of Specialization

All areas are suitable for students planning to enter medical school, continue their biomedical engineering education in graduate school, or pursue careers in the biomedical industry or hospitals.

#### Electronic Instrumentation

Electronic instruments are used widely in the diagnosis and treatment of disease and in the study of normal physiological function. Students in this area learn the fundamentals of electronic and computer (hardware and software) instrumentation.

#### Mechanics

Solid (e.g., musculoskeletal) and fluid (e.g., cardiovascular, pulmonary) mechanics are applied to human physiology in the design and manufacture of limb prostheses or artificial organs. Students in this area learn the fundamental engineering principles needed for this work.

#### Transport Processes

The study of transport processes in living tissue is important in understanding blood flow, lung ventilation, and oxygen transport to and from red blood cells to various tissue beds. Students in this area learn the fundamental chemical engineering principles that relate to these processes.

#### Biotechnology

Biochemical engineering, biochemistry, molecular biology, and biosensors are components of the broad field known as biotechnology. Students in this area learn the various aspects of biotechnology from the engineer's perspective.

#### **Biomedical Signals and Images**

The application of imaging, signal processing, and signal analysis to biomedical problems has become an important part of medicine. MRI, CT-imaging, PET, EKG, and EEG are all examples of physiological signals. Students in this area learn the physiology that underlies these signals and the engineering that underlies their recording and analysis.

#### Curriculum

Students earning a biomedical engineering degree must obtain a minimum of 18 total course credits in engineering design and engineering science and have obtained substantial training in design.

Students seeking admission to dental or medical school should be familiar with the entrance requirements of those

schools to which they intend to apply. In addition to the specifically required courses of the biomedical engineering program, many professional schools also require additional courses in physics, organic and/or physical chemistry, and laboratory biology. These requirements may be satisfied by judicious use of electives.

### **Courses Primarily for Undergraduates**

**BME 170-0 Introduction to Biomedical Engineering** Emphasis on areas of medicine and physiology where

engineering techniques are particularly useful or where a clear need exists for an engineering approach.

**BME 201-0 Biology for Engineers** A survey of biological topics relevant to engineering, focusing on cellular and molecular biology, population growth, and species formation. Prerequisites: MATH 214-1 and CHEM 101 or 171.

**BME 220-0 Introduction to Biomedical Statistics** Basic statistical concepts presented with emphasis on their relevance to biological and medical investigations.

**BME 221-0 Analysis and Simulation of Biological Systems** Circuit analysis and network theorems, transient and sinusoidal steady-state analysis, frequency response, Fourier series, and integral convolution.

**BME 270-0 Introduction to Biomedical Fluid Mechanics** Fundamentals of fluid mechanics and their applications to biological systems.

**BME 301-0 Systems Physiology** Functional/structural aspects of mammalian nervous system. Neural biophysics. Laboratory exercises. Prerequisites: PHYSICS 135-2 and junior standing.

**BME 302-0 Systems Physiology** Cardiovascular and respiratory physiology. Human physiology from a quantitative viewpoint. Anatomy and pathology, where appropriate. Prerequisite: MATH 214-3.

**BME 303-0 Systems Physiology** Cellular mechanisms of and quantitative systems approach to human renal, digestive, endocrine, and metabolic physiology. Prerequisite: BIOL SCI 210-2; junior standing recommended.

#### **BME 308-0 Biomedical Engineering Laboratory**

Laboratory and associated lecture concerning quantitative physiology, testing, and evaluation of biomedical apparatus. Prerequisites: At least two from 301, 302, and 303 and one from 221, ECE 202, or 270. Preference given to seniors in biomedical engineering.

**BME 310-0 Molecular and Cellular Aspects of Bioengineering** Molecular/cellular structure and function, mechanical influences on biological systems, molecular/ cellular experiments. Prerequisites: BIOL SCI 210-2 and GEN ENG 205-3.

**BME 314-0 Models of Biochemistry and Molecular Biology** Mathematical modeling of biochemical and molecular biological problems, such as allosteric enzymes, bacterial transduction, X-ray diffraction, study of DNA. BME 315-0 Application of Genetic Engineering to

**Immunochemistry** Recent developments in genetic engineering as applied to the rapidly developing field of immunochemistry for antibodies and related proteins.

**BME 317-0 Biochemical Sensors** Theory, design, and applications of chemical sensors used in medical diagnosis and patient monitoring. Electrochemical and optical sensors. Prerequisites: chemistry through 210-2; physics through 135-3.

**BME 320-0 Biomedical Signals and Imaging** Fundamentals of signals and systems, time and frequency domain issues. Fourier series and transforms, convolution, frequency response, filtering, and laboratories in biomedical systems and imaging. Prerequisites: GEN ENG 205-4 and PHYSICS 135-3.

**BME 321-0 Theory and Control of Biological Systems** Linear control theory, mathematical foundations, transfer functions, modeling of biological systems, stability. Prerequisite: GEN ENG 205-4.

**BME 322-0 Mathematical Modeling of Physiological Systems** Analysis and modeling of physiological systems. System identification. Traditional approaches. White noise method. Prerequisites: 301, 302, or 303; 320.

**BME 323-0 Visual Science** Mammalian visual system. Optics of the eye. Visual image representation and interpretation. Visual adaptation. Motion. Color vision. Prerequisite: PHYSICS 135-2.

**BME 325-0 Introduction to Medical Imaging** Diagnostic X rays; X-ray film and radiographic image; computed tomography; ultrasound. Prerequisites: 320 and PHYSICS 135-3 or equivalent.

**BME 327-0 Magnetic Resonance Imaging** Nuclear magnetic resonance; two-dimensional Fourier transform, spin-echo and gradient-echo imaging; gradient and RF hardware. Prerequisites: 320 and PHYSICS 135-3.

**BME 338-0 Interaction of Laser Radiation with Tissue** Propagation, scattering, and absorption of light in biological materials. Modeling of diagnostic and therapeutic uses of light. Engineering evaluation of laser-based clinical systems. Prerequisite: junior standing or higher.

**BME 343-0 Biomaterials and Medical Devices** Structureproperty relationships for biomaterials. Metal, ceramic, and polymeric implant materials and their implant applications. Interactions of materials with the body. Prerequisites: MAT SCI 201 or 301 and senior standing.

**BME 344-0 Biological Performance of Materials** Structure-property relationships of materials, physical chemistry of surfaces and interfaces, materials-tissue interactions, applications to the selection and design of materials for medical implants and devices. Prerequisite: MAT SCI 201.

**BME 346-0 Tissue Engineering** In vivo molecular, cellular, and organ engineering, with an emphasis on the foundations, techniques, experiments, and clinical applications

of tissue engineering. Prerequisites: BIOL SCI 210-2 or CHEM ENG 375; GEN ENG 205-3.

**BME 350-0 Transport Fundamentals** Fundamental and biomedical applications of diffusive and convective heat and mass transfer. Prerequisites: 270 and MATH 214-3; 377 recommended.

**BME 365-0 Control of Human Limbs and Their Artificial Replacements** Human movement, biomechanics, skeletal and muscular anatomy, comparative anatomy, muscle physiology, and locomotion. Engineering design of artificial limbs. Prerequisite: senior standing with engineering or physical science background.

**BME 366-0 Biomechanics of Movement** Engineering mechanics applied to analyze human movement, including models of muscle and tendon, kinematics of joints, and dynamics of multijoint movement. Applications in sports, rehabilitation, and orthopedics. Prerequisite: MECH ENG 202 or consent of instructor.

**BME 371-0 Mechanics of Biological Tissues** Stress and strain for small and large deformations. Nonlinear elastic, viscoelastic, pseudoelastic, and biphasic models. Prerequisite: CIV ENG 216 or equivalent.

**CHEM ENG 371-0 Transport Phenomena in Living Systems** See Chemical Engineering.

**BME 372-0 Hemodynamics** Mechanical aspects of the human circulation system. Blood and blood vessel rheology. Pressures and flows in the arterial system. Prerequisites: 270; 302 or 402; or consent of instructor.

**BME 373-0 Cardiac Mechanics** Mechanical behavior of isolated muscle fibers, ventricular walls, and isolated ventricles. Interactions between ventricles and circulation systems. Prerequisite: 371, CIV ENG 216, or consent of instructor.

**BME 377-0 Intermediate Fluid Mechanics** Fundamental concepts of fluid dynamics. Kinematics, maaso and momentum balances, constitutive relations. Navier-Stokes equations and methods of solution. Sealing techniques. Prerequisite: 270 or consent of instructor.

**BME 379-0 Artificial Organs** Basic transport process analyses. Engineering analyses and design of artificial organs: kidneys, lungs, hearts, pancreas, liver. Comparison of natural/artificial organ function. Prerequisites: 302 and 303 or 402 and 403; a heat and/or mass transport course.

**BME 383-0 Cardiovascular Instrumentation** Theory, design, and application of instrumentation used for diagnosis, monitoring, treatment, and research investigation of cardiac and cardiovascular diseases. Examples from the current literature. Prerequisite: 221, ECE 202 or 270, or equivalent, or consent of instructor.

**BME 384-0 Biomedical Computing** Principles of modern (computer-based) medical instrumentation, including analogy vs. digital design tradeoffs, efficient digital filter designs, and algorithms for physiological signal processing,

automated event recognition, and classification. Prerequisites: ECE 270 or equivalent and some experience in computer programming, or consent of instructor.

**BME 390-0 Biomedical Engineering Design** strategy and concepts, including reliability, safety, ethics, economic analysis, and marketing. FDA regulations and patents. Prerequisite: senior standing in biomedical engineering.

## BME 395-0 Special Topics in Biomedical Engineering BME 399-0 Projects

## **Chemical Engineering**

Chemical engineering is concerned primarily with the principles and processes involved in the conversion of raw materials into products vital to modern civilization. The products of the chemical and process industries range from antibiotics to zirconium, from petroleum to pharmaceuticals, from agricultural chemicals to plastics and synthetic rubber. The rapid introduction of new products by the chemical and bioprocess industries gives chemical engineering its characteristic concern with the management and development of innovation. Preparation for careers in chemical engineering requires a comprehension of physical, chemical, biological, and engineering principles. The program aims at developing people who can plan, design, and operate new processes and who may have potential for managerial responsibility in highly technical industrial enterprises.

The chemical engineering curriculum provides this broad fundamental training and prepares graduates for the chemical and process industries or advanced study. The first two years are devoted largely to mathematics, physics, and chemistry. After this, the fundamentals of chemical engineering fall into two sequences: the chemical process principles, emphasizing thermodynamics and kinetics of chemical change, and the transport processes, emphasizing the transfer of mass, momentum, and thermal energy in the physical handling of substances and in their heating, cooling, separation, and purification. Theoretical principles and practical applications are then integrated in courses in systems design and control. Supporting courses in allied fields of engineering and the sciences broaden the technical proficiency of chemical engineers, while courses in the social sciences, humanities, and arts deepens their background in the common hopes and problems of humanity.

#### Areas of Specialization

The curriculum permits students to select an area of specialization and to develop background for further study at the graduate level or for application to specific industries. Students are encouraged to select one of the seven areas listed below or to plan an alternate program with an adviser. There are numerous electives in the basic program, and students are urged to give early consideration to planning for effective use of these opportunities.

## **Chemical Process Engineering**

The chemical process engineering option is designed to prepare students for many areas, including design, operations, research, and management. Recommended for students who want a broad background in chemical engineering, it provides preparation for employment in many fields, including the chemical process and petroleum industries. It is also good preparation for graduate work in chemical engineering or other areas, both technical and nontechnical.

#### **Biomedical Engineering**

Increasing numbers of chemical engineers enter medical school and work in related areas such as pharmaceutical production, biomedical materials, and artificial organs. The biomedical engineering option satisfies the needs of these students by adding courses in biology, biochemistry, and biomedical engineering to the foundation in chemical engineering. Students therefore can prepare for careers in medicine or biomedical engineering as they obtain a degree in chemical engineering.

#### Biotechnology

Biotechnology is the industrial exploitation of biological systems or processes. Microorganisms are employed for production of food, beverages, antibiotics, and solvents as well as for waste treatment. Advances in genetic engineering have led to the production (in animal cells, yeast, and bacteria) of a wide range of enzymes, growth factors, hormones, immunoregulators, and monoclonal antibodies for use in disease diagnosis and therapy. Animal cells and microorganisms produce chemicals via a complex network of tightly regulated chemical reactions, making biotechnology a natural extension of chemical engineering. The biotechnology option provides the background necessary to apply chemical engineering skills in biological systems, especially for process optimization, control, scale-up, and product recovery.

#### Environmental Engineering

Means for improving the quality of our environment, disposing of wastes, and devising waste-free processes often involve chemical processing. The development, construction, and operation of these processes increasingly involves chemical engineers in a leading role. The next decade will see the replacement of many present industrial processes by new ones designed to eliminate or minimize waste products, requiring imaginative engineering. The environmental engineering specialization offers students a way to add special competence in environmental and civil engineering concerns to a chemical engineering degree and to prepare for attacking environmental problems.

#### **Polymer Science and Engineering**

Synthetic polymers are large molecular substances that now provide the basis for the plastics, fiber, and rubber industries. Synthetic polymers are used in fields as diverse as the automotive industry, pollution abatement, low-cost housing, and biomedical engineering and indeed wherever needs exist for new materials with unique properties. The polymer field requires a knowledge of chemistry and some background in materials science in combination with expertise in chemical engineering, especially in transport processes. The option in polymer science and engineering provides training to undergraduates considering working in the field or going to graduate school.

#### Process Control and Simulation

The chemical process industries have long been concerned with the optimal design and control of large-scale systems. In recent years, chemical engineers have played a significant role in the continued evolution of control systems theory and applications and have been instrumental in the use of modern computing methods for such tasks. The process control and simulation specialty provides background for immediate applications or graduate study.

#### General Chemical Engineering

This option provides flexibility for students who desire exposure to a wide range of topics or who wish to specialize in fields of science or engineering not listed above.

#### Laboratories

The Undergraduate Chemical Engineering Laboratory provides facilities for exploring firsthand the quantitative experimental implications of fundamental laws in their application to practical problems of heat transfer, distillation, reaction engineering, and other basic operations. Process dynamics and automatic control principles are studied in the Process Dynamics and Control Laboratory, which is furnished with typical control equipment. A computing laboratory is used in a variety of courses. Chemical laboratory experience is also a part of the polymer course.

## Courses Primarily for Undergraduates CHEM ENG 190-0 Survey of Chemical Engineering

**Concepts and Opportunities** Application of chemical engineering principles illustrated by examples from the chemical, petroleum, food processing, pharmaceutical, electronics, and other industries. Impact of economics, ethics, and other nontechnical constraints.

**CHEM ENG 210-0 Analysis of Chemical Process Systems** Introduction to process systems. Material balances and stoichiometry. Analysis of process system flow sheets. Introduction to departmental computing facilities. Basic numerical analysis. Prerequisites: CHEM 103 and GEN ENG 205-4 (may be taken concurrently).

**CHEM ENG 211-0 Thermodynamics** The first and second laws of thermodynamics. Entropy and equilibrium. Material and energy balances. Equations of state and properties of fluids. Solutions, phase equilibria, and chemical reactions. Prerequisites: 210 and CHEM 342-1.

**CHEM ENG 212-0 Equilibrium Separations** Design and analysis of chemical separation processes such as distillation, absorption, extraction, and leaching. Plant equipment and operations. Prerequisite: 211.

**CHEM ENG 307-0 Kinetics and Reactor Engineering** Chemical reaction kinetics with application to the design of chemical reactors. Prerequisites: 210 (C– or better) and CHEM 343.

**CHEM ENG 312-0 Probability and Statistics for Chemical Engineering** Introduction to probability theory and statistical methods necessary for analyzing the behavior of processes and experiments. Statistical tests for detecting significant changes in process parameters.

**CHEM ENG 321-0 Fluid Mechanics** Derivation and applications of continuity and Navier-Stokes equations. Macroscopic mass, momentum, and energy balance. Dimensional analysis: friction factors in pipes and packed beds; drag coefficients. Prerequisites: completion of mathematics requirements with no grades of D; GEN ENG 205-4.

**CHEM ENG 322-0 Heat Transfer** The differential equations of energy transport. Solutions for various applications. Prerequisite: completion of mathematics requirements with no grades of D.

**CHEM ENG 323-0 Mass Transfer** Diffusion and rate concepts; application to distillation, extraction, absorption, humidification, drying. Prerequisites: 321 and 322.

#### **CHEM ENG 341-0 Process Dynamics and Control**

Dynamic behavior of chemical process components. Feedback control principles. Prerequisite: senior standing; 307 recommended.

**CHEM ENG 342-0 Chemical Engineering Laboratory** Operation and control of process equipment for the determination of operating data. Analysis and written presentation of results. Prerequisites: 307 and 323.

**CHEM ENG 345-0 Process Optimization** Modern techniques and application to the design and operation of chemical process systems. Steady-state and dynamic methods. Experimental search for the optimum. Prerequisite: senior standing.

**CHEM ENG 349-0 Advanced Process Control** Digital sampling; sampled data models; digital controllers; hierarchical, distributed, and advanced regulatory control concepts; plant data and control system tuning; model-based control algorithms; nonlinear consideration; multivariable and noninteracting control systems. Prerequisite: 341.

## CHEM ENG 351-0 Process Economics, Design, and

**Evaluation** Preliminary design of industrial processes for the production of chemical and allied products by the application of the engineering sciences and economics. Prerequisites: 212, 307, and 323.

**CHEM ENG 352-0 Chemical Engineering Design Projects** Design of chemical and process plants applying the principles of unit operations, thermodynamics, reaction kinetics, and economics. Mechanical design and selection of chemical process equipment. Prerequisite: 351.

**CHEM ENG 361-0 Introduction to Polymers** Polymerization mechanisms and their relation to molecular structure, polymerization processes, and the mechanical properties of polymers, especially flow behavior. Prerequisites: CHEM 210-1 and 342-1.

## CHEM ENG 364-0 Chemical Processing and the

**Environment** Application of chemical engineering fundamentals to environmental problems. Chemistry and mechanisms, chemical reaction and rate, and transport emphasized. Risk assessment and analysis revealed through case studies. Prerequisites: 212 and 307.

CHEM ENG 371-0 Transport Phenomena in Living

**Systems** Application of transport theory, principally diffusion, to movement of molecules in biological systems, including blood, cornea, microcirculation, and lung. Pre-requisites: 322 and GEN ENG 205-4 or consent of instructor; 321 and 323 recommended.

**CHEM ENG 375-0 Biochemical Engineering** Modern biochemical engineering. Life sciences: microbiology, biochemistry, and molecular genetics. Metabolic stoichiometry, energetics, growth kinetics, transport phenomena in bioreactors, and product recovery. Prerequisite: 307, 323, or consent of instructor.

**CHEM ENG 377-0 Bioseparations** Downstream process in biotechnology. Separation and lysis of cells. Recovery of organelles and proteins. Protein separation and purification. Prerequisite: 375.

## CHEM ENG 390-0 Personal and Organizational

**Effectiveness** Introduction to nontechnical skills required in a business environment with the goal of increasing personal effectiveness (and marketability) of seniors and graduate students. Prerequisite for preseniors: senior standing.

**CHEM ENG 395-0 Special Topics in Chemical Engineering** Topics suggested by students or faculty and approved by the department.

**CHEM ENG 396-0 Focused Topics in Chemical Engineering** (.5 unit) Emerging topics suggested by students or faculty and approved by the department.

**CHEM ENG 399-0 Projects** Supervised investigation of a chemical engineering problem with submission of a final report.

## **Civil Engineering**

Civil engineers plan systems such as transportation networks or procedures for water control and supply, and they design structures such as buildings, bridges, dams, and sewage disposal plants. They work together with ecologists, sociologists, economists, lawyers, and others to plan how to use wisely the human and natural resources of large areas such as river basins and how to redevelop cities. With few exceptions, each planning or design job is one of a kind, as contrasted with more routine solutions to other engineering problems.

Planning, of course, requires abundant data of all sorts — topography, geology, soils, vegetation, weather and climate, stream-flow and lake currents, traffic routes and patterns, pollution, population, cultural background and preferences, skills and ambitions. Many civil engineers collect, analyze, and present the data, developing and improving measuring instruments as part of their job. Others apply probability and statistical methods to the data to forecast such things as population growth, demand for water and transportation, maximum winds and precipitation, height of floods, and air and water quality.

Designing systems and structures requires the planning forecasts plus accurate data on the mechanical properties of materials such as steel, concrete, soils, rocks, and plastics and on the behavior of structural components made from them. Some civil engineers test materials and physical models to obtain such data. Many more use known physical properties and the laws of mechanics — energy, momentum, and conservation of mass — to design structures, foundations, pavements, pipe networks, and treatment plants that will do the job safely and economically.

Civil engineers who design water and waste treatment facilities or set up programs to reduce air and water pollution need to understand certain chemical reactions and biological processes as well as the usual fluid and solid mechanics. Engineers who help to plan and design a system understand how and why it works and what may go wrong with it. Hence, civil engineers may operate treatment facilities or systems of flood control reservoirs or set up and administer traffic control plans. Civil engineers may become city engineers.

Engineers who design structures and know soil mechanics learn the practical difficulties of providing a foundation and erecting the structure. Thus, they become partly qualified to operate construction companies, and some civil engineers enter the construction business. Administrative and business activities require them also to learn something about accounting, personnel management, and contracts.

Since civil engineering students have such a wide range of career options, the Department of Civil Engineering prescribes a minimum of required courses and required subjects. Students elect the remainder freely or from specified broad categories. The breakdown, from which honors students may deviate with consent of the department's education committee, is as follows: Courses specified by name and number 20 Courses specified by subject 6 Courses required to fit into broad categories 17 Free electives 5 48 Total

For details see the civil engineering curriculum.

#### Areas of Specialization

Civil engineering students may select a program that fits their needs by choosing courses judiciously. The 5 free electives, the 17 courses required to fit into broad categories, and most of the 6 courses specified by subject only (such as thermodynamics or electrical engineering science or chemistry) allow students to construct diverse specialized curricula, broadly based study programs, or intermediate combinations. Students are encouraged to discuss with faculty any proposed program that meets a well-defined goal. Examples of courses selected in the areas of specialization most often pursued by students are listed in the civil engineering curriculum.

#### Laboratories

#### **Environmental Engineering**

Facilities are provided for instruction and research in environmental chemistry, industrial hygiene, environmental microbiology, environmental fluid mechanics, radiological health, and the unit operations of water and waste treatment. Specialized apparatus and instrumentation are available for studies in each area.

#### Geotechnical Engineering

This facility has a variety of conventional and special equipment for the testing and evaluation of rocks, soils, and soil-foundation systems — under both static and dynamic loadings — for undergraduate study, graduate study, and research. The laboratory contains many specialized instruments, including consolidation devices and triaxial compression units equipped for computer-controlled stress, strain, and cyclic loading.

#### Structural Engineering and Structural Mechanics

The department has a large first-class modern laboratory for testing structural materials, especially cement-based materials and composites. The laboratory is equipped with several closed-loop computer-controlled or servocontrolled testing machines capable of static and dynamic loading as well as advanced instrumentation for electron and optical microscopy studies with facilities for image analysis and holographic capabilities, creep testing in programmed environmental chambers, multiaxial or torsional loading, impact testing, acoustic defect detection, and other nondestructive test methods. Basic facilities, including a perforated testing floor, are available also for static and dynamic testing of structural models and structural components. Students conduct experiments using electrical and mechanical strain gauges, structural models, and photoelastic models. A fully equipped shop and technical assistance are available for the design and construction of special loading devices.

#### **Computer Graphics**

The computer graphics undergraduate laboratory contains specialized workstations and input-output devices to support computer-aided design, geographical information systems, facility management and scheduling, and scientific visualization software.

#### **Courses Primarily for Undergraduates**

MAT SCI 203-0 Microstructure and Engineering Properties of Materials See Materials Science and Engineering.

**CIV ENG 206-0 Environmental Literacy** Simple concepts from the sciences and engineering applied to specific environmental problems, including the concepts of risk. Understanding of and quantitative facility in multidisciplinary aspects of environmental decisions.

**CIV ENG 212-0 Mechanics** Force systems, equivalence of force systems, and resultants. Equilibrium of a rigid body and systems. Kinematics and dynamics of a rigid body in plane motion. Work and energy relations for a rigid body in plane motion. Prerequisites: PHYSICS 135-1 and registration in MATH 215.

**CIV ENG 216-0 Mechanics of Materials I** Analytical and experimental study of stresses and deformations and their application to the design of machine and structural elements subjected to static, dynamic, and repeated loads. Prerequisite: 212 or GEN ENG 205-2.

**CIV ENG 219-0 Continuum Mechanics I** Introductory concepts of mechanics of continua. Analysis of deformation and stress and the equations of motion, with special emphasis on the elastic solid and Newtonian fluid. Prerequisites: PHYSICS 135-1 and MATH 217.

## **GEN ENG 220-0 Analytical and Computer Graphics** See General Engineering Courses.

**CIV ENG 221-0 Theory of Structures I** Deflections of structures, energy concepts, idealization of structures, truss analysis, column stability, and influence lines. Introduction to indeterminate truss and frame analyses, slope-deflection analysis, and moment distribution. Portal method. Prerequisite: 216.

**CIV ENG 222-0 Structural Steel Design** Rational basis of structural design. Design approach for structural steel components of a building system. Prerequisite: 221.

**MECH ENG 241-0 Fluid Mechanics I** See Mechanical Engineering.

**CIV ENG 250-0 Introductory Soil Mechanics** Fundamental properties and behavior of soils as engineering materials. Origin of soils through the properties of soil components to the strength, permeability, and deformation of soil masses. Prerequisite: 216.

#### CIV ENG 260-0 Fundamentals of Environmental Engi-

**neering** Mass and energy concepts applied to major issues facing environmental engineers: safe drinking water, surface water quality, ambient air quality, global atmosphere,

managing solid and hazardous wastes. Prerequisites: CHEM 101 and MATH 214-2 (may be taken concurrently).

## **CIV ENG 261-0 Environmental Engineering Analysis**

Development of quantitative analytical tools for describing physical, chemical, and microbiological processes in natural and engineering systems relevant to environmental engineering. Prerequisites: 260 and CHEM 102.

#### CIV ENG 267-0 Chemistry of the Natural Environment

Fundamental principles of organic and inorganic chemistry applied to air, water, soil, and sediments. Focus on problem solving. Laboratory/field projects. Prerequisite: CHEM 103.

**CIV ENG 302-0 Engineering Law** Relationship between social, political, and economic problems in engineering; contracts; competitive bidding; the engineer's role in management; liability; insurance; lawsuits; arbitration; legal implications of environmental laws; professional societies; ethics. Prerequisite: junior standing.

**CIV ENG 306-0 Uncertainty Analysis in Civil Engineering** Development and applications of the analysis of uncertainty — including basic probability, statistics, and decision theory — in civil engineering.

## CIV ENG 307-0 Microstructure of Cement-Based

**Materials** Chemistry of the principal silicate and aluminate cements used in building and civil engineering. Emphasis on underlying science rather than on practical application. Experimental and theoretical aspects of cement chemistry; relationships between processing, microstructure, and properties.

**CIV ENG 314-0 Mechanics of Crustal Processes** Application of elementary mechanics to geological processes of crustal deformation, including faulting, earthquake generation and deformation, folding, and coupling of fluid flow with deformation. Prerequisites: 216 and MATH 221 or GEN ENG 205-4.

**CIV ENG 318-0 Mechanics of Fracture** Stress concentration: analysis of the stress field near a crack tip; fracture modes; brittle and ductile fracture; fracture toughness; fracture criteria; fracture-mechanics design; fatigue; dynamic effects. Prerequisites: course in mechanics of materials and MATH 217.

**CIV ENG 319-0 Theory of Structures II** Shear center, biaxial bending, and torsion for beams. Approximate methods of analysis, moment distribution, and Muller-Breslau principle. Introduction to limit analysis, plate and shell problems. Computer applications. Prerequisite: 221.

**CIV ENG 320-0 Structural Analysis** Analysis of deflection and indeterminate structures by the interchange concept. Continuous beams and frames having nonprismatic members. Analysis of vibration characteristics of structures, response of buildings to dynamic loads.

**CIV ENG 321-0 Properties of Concrete** Concrete as a composite material; relationship between constitutive laws and microstructure; failure theories; fracture; fatigue; strain rate effects; destructive and nondestructive testing; creep

and shrinkage; chemistry of cement hydration; admixtures; aggregates; proportioning; new materials.

**CIV ENG 322-0 Structural Design** Design criteria; planning and design aspects of structural systems for gravity and lateral loads. A total design project involving the analysis and design of a structure. Prerequisite: 222 or equivalent.

**CIV ENG 325-0 Reinforced Concrete** Fundamentals of reinforced concrete theory and design. Analysis and design of beams, slabs, and columns. Introduction to ultimatestrength design and prestressed concrete. Concurrent familiarization with current building codes, specifications, and practices. Prerequisite: 221.

**CIV ENG 327-0 Finite Element Methods in Mechanics** Development of elements from variational principles and application to static continuum problems. Introduction to techniques for dynamics and generalized field problems. Computer implementation of finite element techniques.

**CIV ENG 330-0 Construction Management** Techniques for coordinating decisions and actions of various parties in the design and construction of civil engineering projects. Delivery systems; preconstruction services; project planning; cost control and value engineering; bidding. Prerequisite: presenior or senior standing.

**CIV ENG 332-0 Construction Estimating** Estimation of cost at different stages of design; conceptual estimating, quantity takeoff of various elements, such as materials, labor, equipment. Prerequisite: senior standing.

**CIV ENG 336-0 Project Scheduling** Project planning, scheduling, and control using CPM arrow and precedence networks; minimum cost scheduling; basic resource allocation and leveling; overlapping networks; PERT charts; hands-on experience in using computer tools. Prerequisite: senior standing.

### CIV ENG 338-0 Public Infrastructure Management

Addresses the complexity of managing public infrastructure facilities by means of a five-part interactive model. Objective is to impart a realistic appreciation of contemporary public infrastructure management policies and practices. Prerequisite: senior standing.

**CIV ENG 340-0 Fluid Mechanics II** Civil engineering applications of fluid mechanics. Turbulent flow in pipes, pipe networks, and open channels.

**CIV ENG 346-0 Meteorology and Hydrology** Weather instruments and observations. Mechanics of the atmosphere. Precipitation, runoff, groundwater flow. Methods of analyzing rainfall and stream-flow records for power generation, flood control, and water supply. Prerequisite: MECH ENG 241.

**CIV ENG 349-0 Environmental Management** The roles and responsibilities of project managers who deal with environmental issues. How managers deal with previously created environmental problems, respond to current requirements, and anticipate future needs. A technical background is expected. Prerequisite: senior standing. **CIV ENG 352-0 Foundation Engineering** Application of soil mechanics to analysis and design. Settlement of structures, bearing capacities of shallow and deep foundations, earth pressures on retaining structures, and slope stability. Prerequisite: 250.

**CIV ENG 355-0 Engineering Aspects of Groundwater Flow** Applied aspects of groundwater flow and seepage, including Darcy's law, parameter determination, aquifer test analysis, flow-net construction and application, modeling techniques, slope stability analysis, drainage, and filter design. Lecture and laboratory. Prerequisite: fluid mechanics.

## CIV ENG 356-0 Transport Processes in Porous Media

Transport processes in porous media, including unsaturated flow, flow in deformable porous media, convective transport of solutes with hydrodynamic dispersion effects, and coupled flow phenomena with particular emphasis on electrokinetics. Prerequisite: 355.

**CIV ENG 358-0 Airphoto Interpretation** Principles and practice of using aerial photographs to obtain information about natural features of the earth's surface, with emphasis on earth materials. Landforms, geological processes, rocks, and soils. Stereoscopic photographs, elements of photogrammetry. Prerequisite: junior standing or consent of instructor.

**CIV ENG 359-0 Hazardous Waste Management** Definition and regulation of wastes. Pollutant transport, fate, and toxicology. Management via audits and prevention. Treatment and control. Risk and site assessment and site remediation. Prerequisite: upperclass standing in engineering or science or consent of instructor.

#### **CIV ENG 360-0 Environmental Impact Evaluation**

Methods for evaluating impacts of engineering projects on environmental quality; environmental legislation; environmental quality indices. Participation in a multidisciplinary group project; preparation of impact report. Prerequisite: junior standing.

**CIV ENG 361-0 Public Health Engineering** Evaluation of the disease status of a community; elements of vital statistics and epidemiology; etiology of infectious and non-infectious diseases; control of environmentally based health hazards.

**CIV ENG 363-0 Community Air Pollution** Nature and control of community air pollution. Sources, physical and chemical properties, and effects of major air pollutants; analytical measurements and monitoring of air pollutants; engineering and legislative control. Prerequisite: junior standing.

**CIV ENG 364-0 Sanitary Engineering** Engineering elements of water supply and water pollution abatement. Water quality standards, water and wastewater treatment processes, and the management of receiving waters to control pollution. Prerequisite: MECH ENG 241; 340 recommended. **CIV ENG 365-0 Radiation Health** Survey of the principles of health physics: sources of radiation, physics of radioactivity and ionizing radiation, interaction of radiation and radiation dosimetry, biological effects of radiation, radiation safety standards, principles of radiation protection.

**CIV ENG 366-0 Ecosystems and Ecotoxicology** Responses of terrestrial and aquatic ecosystems to environmental stress, with emphasis on ecotoxicological effects; ecosystem considerations in engineering problems and solutions. Prerequisite: junior standing in engineering or science.

**CIV ENG 367-0 Aquatic Chemistry** Physical chemistry of the aqueous environment; solution and heterogeneous equilibria; reactions at solid-solution interface. Water and wastewater analyses. Lecture, laboratory. Prerequisite: CHEM 103.

**CIV ENG 368-0 Industrial Hygiene and Environmental Control** Application of industrial hygiene principles and practice; measurement and control of atmospheric contaminants. Design and evaluation of industrial ventilation systems. Prerequisite: junior standing.

**CIV ENG 370-0 Environmental Engineering Design** Decision making in selection and implementation of environmental control measures. Water supply and wastewater management: quantities to be handled, transportation systems, treatment processes, solid wastes management. Prerequisite: 364.

**CIV ENG 371-0 Introduction to Transportation Planning and Analysis** Analysis and design of solutions to transportation problems; introduction to selected operations research and statistical analysis techniques; extensive use of case studies in urban transportation, intercity passenger transport, and freight movements. Prerequisite: junior standing or consent of instructor.

**CIV ENG 372-0 Transportation System Design and Analysis** Integrative design and analysis experience; physical

and programmatic problems, including operations, terminals, and management; fundamental concepts of transportation; systematic approaches to creative problem solving.

**CIV ENG 376-0 Transportation System Operations** Characteristics of roadway travel; vehicle and human factors, intersection performance and control; management and control of arterial streets and networks; neighborhood traffic restraint, urban transit operations. Operations concepts and theories applied to actual problems through laboratory practice.

**CIV ENG 395-0 Special Topics in Civil Engineering** Topics suggested by students or faculty and approved by the department.

**CIV ENG 398-1,2 Community-Based Design** Yearlong participation in two- or three-person team projects involving research, analysis, and/or design in the solution of environmental problems affecting primarily low-income communities. Grade assigned only on completion of both

units. Prerequisites: junior or senior standing in civil or environmental engineering and consent of instructor. **CIV ENG 399-0 Projects** Special studies under faculty direction. Credit to be arranged.

## **Computer Science**

The Department of Computer Science offers a wide variety of programs leading to the BS degree. Courses and research focus on software, ranging from theoretical models to practical applications. Particular areas of research include

- artificial intelligence, including mobile robots with perceptual systems, models of memory and reasoning, knowledge representation, natural language comprehension, planning, and problem solving
- human-computer interaction, including interface design, task modeling, intelligent interfaces, authoring tools
- distributed interactive systems, including client-server and Web-based applications such as heterogeneous databases and multimedia learning environments
- theoretical computer science, focusing on algorithm design and analysis of algorithms' worst- and averagecase behavior
- intelligent information systems, including "frictionless" proactive systems and context and task-sensitive retrieval systems
- computer systems, including parallel, distributed, and real-time systems, networks, performance analysis, prediction and scheduling, and Internet and grid application development
- computer graphics, human-computer interfaces for spatial applications, visualization, and computer entertainment

Courses and research are highly interdisciplinary, with particularly strong connections to education and psychology, through both shared faculty and joint research projects. Detailed information on degree requirements and elective courses is available from the department office.

Computer science majors may complete a minor in art and technology. For details, see page 225.

## Facilities

Computer science students have access to state-of-the-art facilities, ranging from simple microcomputers to the latest multimedia workstations. The campus, including residence halls, is extensively networked with a 100-megabit FDDI University network backbone. All students have full Internet access. Electronic mail, Web sites, and other computerbased communication facilities are used to increase the bandwidth between students and faculty beyond the classroom.

#### Courses Primarily for Undergraduates

**COMP SCI 110-0 Introduction to Computer Programming** Introduction to programming practice using a modern programming language. Analysis and formulation of problems for computer solution. Systematic design, construction, and testing of programs. Substantial programming assignments.

**COMP SCI 111-0 Fundamentals of Computer Programming** Introduction to principles of programming and procedural thinking. Procedural abstraction, data abstraction, modularity, object-oriented programming. Uses the Scheme programming language and computer facilities. Substantial programming assignments, including numerical and symbolic programs. Required for computer science majors.

**COMP SCI 120-0 Introduction to Computers and Information Technology** Basic concepts of computer systems. Considerable hands-on experience with applications such as word processors, databases, and spreadsheets. Information technology's impact on today's society. No previous experience with computers needed. Not for engineering or computer science majors or students who have taken 110 or 111.

**COMP SCI 211-0 Fundamentals of Computer Programming II** Continuation of 111. Key concepts in software design and systems programming. Object-oriented programming (in C++), design of interpreters and compilers, and register machines. Required for computer science majors. Prerequisite: 111.

**COMP SCI 310-0 Mathematical Foundations of Computer Science** Basic concepts of finite and structural mathematics. Sets, axiomatic systems, the propositional and predicate calculi, and graph theory. Application to computer science: sequential machines, formal grammars, and software design. Prerequisites: 110 or 111 and MATH 214-3.

**COMP SCI 311-0 Data Structures and Data Management** The design, implementation, and analysis of abstract data types; data structures and their algorithms. Topics include data and procedural abstraction, linked lists, stacks, queues, binary trees, searching, and sorting. Required for computer science majors. Prerequisite: 211.

**COMP SCI 317-0 Data Management and Information Processing** Data representation, file and record organization, linear and linked lists, and scatter storage techniques. Sorting and searching algorithms. Solving problems involving large databases. Not for students in computer science. Prerequisite: 110, 111, or programming experience.

**COMP SCI 322-0 Compiler Construction** Overview of compilers and context-free languages, top-down parsing, LL(1) parser construction, translation grammars, implementation of lexical analyzer, parser and translator, compiler optimization, error handling, and recovery. Prerequisite: 311.

**COMP SCI 325-1, 2 Artificial Intelligence Programming** Introduction to LISP and programming knowledge-based systems and interfaces. Strong emphasis on writing maintainable, extensible systems. Topics include semantic networks, frames, pattern matching, deductive inference rules, casebased reasoning, discrimination trees. Project driven. Substantial programming assignments. Prerequisite: 110, 111, or programming experience. **COMP SCI 330-0 Human-Computer Interaction** Introduction to human-computer interaction and the design of systems that work for people and their organizations. Understanding the manner in which humans interact with and use their computers for productive work. Prerequisites: programming experience.

**COMP SCI 332-0 Introduction to Computer Vision** Introduction to computer and biological vision systems, image formation, edge detection, image segmentation, texture, representation and analysis of two- and three-dimensional structures. Prerequisites: 311 and MATH 217.

**COMP SCI 336-0 Design and Analysis of Algorithms** Analysis techniques: solving recurrence equations. Algorithm design techniques: divide and conquer, the greedy method, backtracking, branch-and-bound, and dynamic programming. Sorting and selection algorithms, order statistics, heaps, and priority queues. Prerequisite: 310, 311, or consent of instructor.

## **COMP SCI 337-0 Natural Language Processing** Semantics-oriented introduction to natural language

processing, broadly construed. Representation of meaning and knowledge inference in story understanding, script/ frame theory, plans and plan recognition, counterplanning, and thematic structures. Prerequisite: 348 or consent of instructor.

**COMP SCI 339-0 Introduction to Database Systems** Data models and database design. Modeling the real world: structures, constraints, and operations. The entity relationship to data modeling (including network hierarchical and object-oriented), emphasis on the relational model. Use of existing database systems for the implementation of information systems. Prerequisite: 311.

**COMP SCI 343-1,2 Operating Systems** Fundamental overview of operating systems. **1.** Operating system structures, processes, process synchronization, deadlocks, CPU scheduling, and memory management. **2.** File systems, secondary storage management, issues in distributed systems, case studies, and special topics. Requires substantial programming projects. Prerequisite: 311.

**COMP SCI 344-0 Design of Computer Problem Solvers** Principles and practice of organizing and building artificial intelligence reasoning systems. Pattern-directed rule systems, truth-maintenance systems, and constraint languages. Prerequisite: 348 and 325-1 or equivalent LISP experience.

**COMP SCI 348-0 Introduction to Artificial Intelligence** Core techniques and applications of AI. Representing, retrieving, and applying knowledge for problem solving. Hypothesis exploration. Theorem proving. Vision and neural networks. Prerequisite: 111, 325-1, or LISP programming experience.

**COMP SCI 351-0 Introduction to Computer Graphics** Mathematical software and hardware requirements for computer graphics systems. Data structures and programming languages. Random displays. Graphic applications. Prerequisite: 311.

## COMP SCI 394-0 Software Project Management and

**Development** Software development methodologies. Object-oriented analysis and design, CASE tools, software life cycle. Project management tools, programming teams. Executable specifications, automatic test generation. Prerequisite: 343 or equivalent programming experience.

**COMP SCI 395-0 Special Topics in Computer Science** Topics suggested by students or faculty and approved by the department.

**COMP SCI 399-0 Projects** Seminar and projects for advanced undergraduates on subjects of current interest in computer science.

#### **Electrical and Computer Engineering**

The Department of Electrical and Computer Engineering has two distinct curricula — electrical engineering and computer engineering — both of which offer a broad range of programs leading to the BS degree. In addition, the department offers MS and PhD degrees.

#### **Electrical Engineering**

Electrical engineering involves the development and application of electronic and optical technologies for generating, communicating, and processing information. The electrical engineering curriculum includes courses in electronic circuits, solid-state electronics, electromagnetics, optics, lasers, controls, digital signal processing, communications and networks. Students may specialize in any of the following areas.

#### **Circuits and Electronics**

This area of study is concerned with the analysis and design of circuits that employ electronic devices such as integrated circuits, transistors, diodes, light-emitting diodes, data storage elements, and image-forming devices. Important applications include AM and FM radio, television, digital computers, and electronic control instrumentation systems.

#### **Communications** Systems

A communication system involves the generation of an electrical signal representing information to be transmitted, its encoding in some form for efficient transmission, its actual transmission, its decoding at the receiving end of the system, and its reconversion into something intelligible to the user. The thorough study of communications systems theory requires knowledge of a broad range of mathematical methods and of the capabilities and limitations of electronic circuits. This subject also covers the design and analysis of communication networks for the transmission of audio, video, and data among many users.

#### **Control Systems**

The study of control systems deals with the analysis and design of automatic regulators, guidance systems, numerical control of machines, robotics, and computer control of industrial processes. Students are concerned with identifying these systems and with such topics as system stability, system performance criteria, and optimization. These concepts find application in other fields of engineering and in the development of better understanding of biological, energy, economic, and social systems.

#### Digital Signal Processing

Study in this area focuses on the digital representation and algorithmic manipulation of speech, audio, image, and video signals. Specific topics within this general area include image and video processing, recovery and compression, multimedia signal processing, filter design and rankorder operators, image and video transmission, medical and biomedical signal processing, medical imaging, and algorithms for medical instrumentation.

#### Electromagnetics and Photonics

Study in the area of photonic systems and technology focuses on microcavity lasers, nanostructures, quantum and nonlinear optics, integrated optics, fiber-optic and infrared waveguide devices, fiber-optic communications, computational electromagnetics, and imaging through turbulence. Special emphases include applications of novel quantum amplifiers in optical communications, imaging, and cryptography; devices for tera-bit second WDM and TDM optical networks; and applications of computational techniques in integrated and nonlinear optics.

## Solid-State Engineering

This area is concerned with the design, physical principles, and applications of solid-state devices both as discrete units and integrated circuit systems. In addition to the various diode, transistor, and FET devices fabricated from silicon technology, other devices developed from compound semiconductor materials are reviewed. Both analog and digital circuit applications are stressed. Another important topic is the behavior of conductors in the superconducting state, with a stress on applications.

#### **Computer Engineering**

Computer engineering deals with digital design, computer hardware and architecture, robotics, microprocessors, software and programming, and the interrelationships between hardware and software. The computer engineering curriculum involves courses in digital logic, electronic circuits, computer architecture, robotics, VLSI design, VLSI CAD, software programming, operating systems, microprocessor systems, and parallel computing. The computer engineering curriculum allows students to develop a particular specialization in the following areas.

## Embedded Systems

This area focuses on the use of digital hardware to monitor and control physical systems. Topics include discretedynamics systems, digital controllers, analog-to-digital converters, microprocessor-based design, and the economic trade-offs of different software and hardware systems.

#### High-Performance Computing

This area introduces students to the field of state-of-the-art high-performance computing. In particular, it deals with aspects of computing involving multiple processors working together on a common problem, including issues of computer architecture, parallel programming and algorithms, numerical computing, and computer networking.

#### Software

This area exposes students to the field of writing software that runs on compilers. Students are taught the techniques of designing and analyzing efficient algorithms, how to develop operating systems and compilers, and how to write programs using efficient data structures and software engineering practices.

## VLSI and Computer-Aided Design

This area focuses on systematic approaches to designing high-performance integrated circuits consisting of millions of transistors. This specialization includes topics such as low-power, high-speed, and reliable circuit design, hardware-software codesign, design verification, design of multi-FPGA systems, and CAD techniques.

#### Laboratory and Computer Facilities

The department has a variety of modern, well-equipped instructional and research laboratories. Facilities primarily for electrical engineering include laboratories for electronic circuits, digital circuits, solid-state electronics, the fabrication of solid-state lasers and other quantum electronic/ photonic devices, thin-film device development, biomedical electronics, microwave techniques, holography and coherent light optics, biological and other control systems, and signal, image, and speech processing. Facilities for electrical and computer engineering include laboratories in digital systems design, microprocessor systems, microprogramming, computer communication networks, robotics, computer-aided design, and computer networking.

The department has major research facilities for work in parallel and distributed computing systems, database systems, computer vision, VLSI design, CAD, robotics, solid-state devices, fiber optics, lasers, computational electromagnetics, electronic materials, and biomedical engineering. The department also maintains the ECE Computing Laboratory, which has many networked workstations and appropriate software to support class work and projects. The machines are connected to external networks, allowing off-site computing. There are also three parallel machines available at the Center for Parallel and Distributed Computing.

Undergraduate electrical and computer engineering majors are entitled to accounts on departmental computers that are generally more powerful and less heavily used than other University computers.

## **Courses Primarily for Undergraduates**

**ECE 115-0 The Electron in the 21st Century** Introduction to the basic physics of solid state, to materials science, and to semiconductor science and technology; overview of semiconductors, light emitters and detectors, and optoelectronics.

**ECE 202-0 Introduction to Electrical Engineering** Concepts and applications of electrical engineering. Quantization, binary representation, performance. Power spectral density, digital filtering, fundamental limitations. Control systems, feedback systems. Properties of lasers, amplifiers, passive circuit elements, active circuit elements. Electronic devices and materials.

**ECE 203-0 Introduction to Computer Engineering** Overview of computer engineering design. Number systems and Boolean algebra. Logic gates. Design of combinational circuits and simplification. Decoders, multiplexers, adders. Sequential logic and flip flops. Introduction to assembly language. Application of concepts to a computer engineering design project.

**ECE 205-0 Fundamentals of Computer System Software** Basics of assembly language programming. Macros. System stack and procedure calls. Techniques for writing assembly language programs. Features of INTEL 8086/88-based PC. Interfaces between C and assembly codes. Prerequisite: GEN ENG 205-1,2,3,4 or COMP SCI 110; ECE 203 is recommended.

**ECE 221-0 Fundamentals of Circuits** Circuit analysis and network theorems; linearity and superposition; series/ parallel combinations of R, L, and C circuits; sinusoidal forcing; complex frequency and Bode plots; mutual inductance and transformers; two port networks; Fourier analysis; response of circuits to periodic nonsinusoidal sources. Prerequisite: 202.

#### ECE 222-0 Fundamentals of Signals and Systems

Comprehensive introduction to analysis of continuous and discrete-time signals and systems. Linear timeinvariant systems, convolution. Fourier series representations of periodic signals. Continuous time and discrete time Fourier transforms. Laplace transform; z-transform. Prerequisite: 202.

**ECE 223-0 Fundamentals of Solid-State Engineering** Crystalline state of matter; quantum phenomena and quantum mechanics; electrons in atoms, atoms in crystals, electrons in crystals; semiconductors; thermal properties of crystals, electrical properties of crystals and semiconductors; p-n junction. Prerequisites: 202, PHYSICS 135-3, and MATH 215.

**ECE 224-0 Fundamentals of Electromagnetics and Photonics** Concepts of flux, potential, gradient, divergence, curl, and field intensity. Boundary conditions and solutions to Laplace and Poisson equations. Capacitance and inductance calculations. Conductors, insulators, and magnetic materials. Prerequisite: 202. **ECE 225-0 Fundamentals of Electronics** Diode, BJT, and FET circuits; design using ideal operational amplifiers; feedback; frequency response; biasing; current sources and mirrors; small-signal analysis; design of operational amplifiers. Prerequisites: 221 and 223.

**ECE 230-0 Programming for Computer Engineers** Introduction to computer programming in an object-oriented language. Emphasis on applications to computer systems, computer simulation, and discrete optimization. Basic principles of software engineering. Prerequisite: GEN ENG 205-1,2,3,4.

**ECE 250-0 Physical Electronics and Devices** The physical basis of electronic and optoelectronic devices and their application in analog and digital systems. Diodes, transistors, LEDs, photodetectors, and lasers are described, and their properties are explored. Prerequisites: 221 and PHYSICS 135-2.

**ECE 270-0 Applications of Electronic Devices** DC and AC networks, rectifiers, transistor amplifiers, feedback and operational amplifiers, digital electronics, and microprocessors. Not open to electrical engineering majors. Prerequisites: MATH 214-2 and PHYSICS 135-2 or equivalent.

**ECE 302-0 Probabilistic Systems and Random Signals** Basic concepts of probability theory and statistics, random variables, moments; multiple random variables, conditional distributions, correlation; random signals; applications to engineering systems. Prerequisite: MATH 215.

**ECE 303-0 Advanced Digital Logic Design** Overview of digital logic design. Technology review. Delays, timing in combinational and sequential circuits, CAD tools, arithmetic units such as ALUs and multipliers. Introduction to VHDL. Prerequisite: 203.

**ECE 307-0 Communications Systems** Analysis of analog and digital communications systems, including modulation, transmission, and demodulation of AM, FM, and TV systems. Design issues, channel distortion and loss, bandwidth limitations, additive noise. Prerequisites: 222 and 302.

**ECE 308-0 Advanced Electromagnetics and Photonics** Electromagnetic waves, transmission lines; impedance transformation; transients on lines; electrostatics, conductors, and capacitors; magnetostatics and inductors; wave reflection and transmission; electromagnetic motor, Maxwell's equations; metallic waveguides and wave transmission; antenna and diffraction, antenna arrays, communication, and radar. Prerequisite: 224.

**ECE 313-0 Telecommunication Networks for Multimedia** Signals and bandwidth concepts, spectra, basics of electronics, information and coding, modulation, multiplexing, transmission systems, transmission media, analog versus digital communications, computer networks, and switching techniques. Not for electrical engineering or computer engineering majors.

**ECE 328-0 Numerical Methods for Engineers** Introduction to numerical methods; numerical differentiation, numerical integration, solution of ordinary and partial differential equations. Students write programs in FORTRAN, C, or Pascal using methods presented in class. Prerequisites: GEN ENG 205-1,2,3, and MATH 214-1,2,3.

**ECE 332-0 Digital Image Analysis** Introduction to computer and biological vision systems, image formation, edge detection, image segmentation, texture, representation and analysis of two-dimensional geometric structures, and representation and analysis of three-dimensional structures. Prerequisites: MATH 217, COMP SCI 311, and IEMS 202.

**ECE 333-0 Introduction to Communication Networks** Data communication basics. Telephone, cellular, cable and computer networks. Layered network architectures, models, and protocols. Switching, routing, flow control, and congestion control. Medium access control, ARQ, and local area networks. Queuing models and network performance analysis. Prerequisite: 302, IEMS 202, MATH 330, or equivalent basic probability theory.

**ECE 346-0 Microprocessor System Design** Structure and timing of typical microprocessors. Sample microprocessor families. Memories, UARTS, timer/counters, serial devices and related devices. MUX and related control structures for building systems. Sample single-board computers. Standard bus structures. Interrupt programming. Hardware/software design tradeoffs. Prerequisites: 203 and 205.

**ECE 347-0 Microprocessor System Projects** Programmable logic devices such as PAL, FPGA, etc. Design, prototype, and test individual projects involving microprocessors and programmable logic devices. Prerequisites: 303 and 346.

**ECE 353-0 Digital Microelectronics** Logic families, comparators, A/D and D/A converters, combinational systems, sequential systems, solid-state memory, large-scale integrated circuits, and design of electronic systems. Prerequisites: 203 and 225.

**ECE 357-0 Introduction to VLSI CAD** VLSI physical design, including logic design, architectural design, and packaging. Development of CAD tools for VLSI physical design. Prerequisites: 303 and COMP SCI 311.

**ECE 358-0 Introduction to Parallel Computing** Introduction to parallel computing for scientists and engineers. Shared memory parallel architectures and programming, distributed memory, message-passing data-parallel architectures, and programming. Prerequisites: 361; 230 or COMP SCI 211.

**ECE 359-0 Digital Signal Processing** Discrete-time signals and systems. Discrete-time Fourier transform, z-transform, discrete Fourier transform, digital filters. Prerequisite: 222.

**ECE 360-0 Introduction to Feedback Systems** Linear feedback control systems, their physical behavior, dynamical analysis, and stability. Laplace transform, frequency spectrum, and root locus methods. System design and compensation using PID and lead-lag controllers. Digital implementations of analog controllers. Prerequisite: 222.

**ECE 361-0 Computer Architecture** Design and understanding of the computer system as a whole unit. Performance evaluation and its role in computer system design; instruction set architecture design, datapath design and optimizations (e.g., ALU); control design; single cycle, multiple cycle, and pipeline implementations of processor. Hazard detection and forwarding; memory hierarchy design; cache memories, virtual memory, peripheral devices, and I/O. Prerequisites: 205 and 303.

**ECE 362-0 Computer Architecture Project** Quarter-long team project that entails designing a processor for a complete instruction set. Involves ISA design, design of components, datapath, and control for a pipelined processor to implement the ISA. Students use industrial-strength design tools; VHDL is used as the design specification language. Designs are evaluated using benchmark programs for correctness and performance. Prerequisite: 361.

**ECE 363-0 Digital Filtering** Recursive and nonrecursive digital filters, decimation and interpolation, A/D and D/A conversion as digital filtering problems. Implementation of nonrecursive filters via FFT, quantization problems, e.g., companding and limit cycles. Prerequisite: 359.

**ECE 365-0 Communication Filters** Analytical approximations in the design of analog filters. Matched filters and their implementation with surface-acoustic-wave and charge-coupled devices. Prerequisites: 221 and 307.

**ECE 374-0 Introduction to Digital Control** Discrete dynamics systems; discrete models of continuous systems feedback and digital controllers; analog-digital conversion; digital control design including PID, lead/lag, deadbeat, and model-matching controllers. Prerequisite: 360.

**ECE 378-0 Digital Communications** Sampling and timedivision multiplexing, baseband digital signals and systems. Coded pulse modulation, error control coding, digital modulation systems, information measure and source encoding, and introduction to spread spectrum communications. Prerequisites: 302 and 307.

**ECE 379-0 Lasers and Coherent Optics** Optical resonators; fundamental operation of lasers; mode-locking and Q-switching; optical propagation and diffraction; Gaussian beams; thin-lens imaging; optical signal processing. Prerequisites: 222 and 224.

**ECE 380-0 Wireless Communications** Overview of existing and emerging wireless communications systems; interference, blocking, and spectral efficiency; radio propagation and fading models; performance of digital modulation in the presence of fading; diversity techniques; code-division multiple access. Prerequisite: 378.

**ECE 381-0 Electronic Properties of Materials** Fundamental properties of electrons in materials. Classical and quantum mechanical descriptions of free and bound electrons. Optical, electrical, thermal, and magnetic properties of materials. Microelectronic, optoelectronic, magnetic recording, superconductivity. Prerequisites: 223 and 224 or consent of instructor. **ECE 382-0 Photonic Information Processing** Coherent and incoherent light; electro-optic and acousto-optic modulation; optical signal processing; holography; optical storage. Prerequisites: 222 and 224 or consent of instructor.

**ECE 383-0 Fiber-Optic Communications** Semiconductor diode lasers, internal modulation, electro-optic modulation, coherent and incoherent detection, optical fibers and their properties, optical amplifiers, communication systems, optical networks. Prerequisites: 223 and 224.

**ECE 384-0 Solid-State Electronic Devices** Energy-band model for semiconductors; carrier statistics and transport; diodes, bipolar and field-effect transistors; integrated circuits, optoelectronic and heterojunction devices. Prerequisite: 381 or consent of instructor.

**ECE 385-0 Optoelectronics** Introduction to solid-state optoelectronic devices; display devices, laser diodes, photo-detectors, and light modulators; optical waveguides and fibers; system application of optoelectronic devices. Pre-requisite: 381 or consent of instructor.

**ECE 386-0 Computational Electromagnetics and Photonics** Introduction to the finite-difference timedomain (FDTD) method in numerical modeling of electromagnetic and optical wave interactions with engineering structures. Finite differences; Maxwell's equations; numerical dispersion and stability; free-space and waveguide field sources; absorbing boundary conditions; material dispersions and nonlinearities; modeling examples in modern electromagnetic and optical engineering. Prerequisite: 308.

**ECE 388-0 Microelectronic Technology** Physics and fabrication of photonic and electronic devices. Physics of semiconductors: crystal structures, reciprocal lattice, elements of quantum mechanics, heterojunctions, quantum wells, and superlattices. Bulk crystal, thin-film, and epitaxial growth technologies. Device processing technologies: diffusion oxidation, ion implantation, annealing, etching, and photo-lithography. Prerequisite: 381 or consent of instructor.

**ECE 389-0 Superconductivity and Its Applications** Properties of materials in the superconducting state; charge flow dynamics of type II superconductors; high-Tc superconductors; applications for computers and high-frequency devices. Prerequisite: 381 or consent of instructor.

**ECE 390-0 Introduction to Robotics** Homogeneous vectors and planes; homogeneous transformation, position and orientation transformations, kinematics and inverse kinematic solutions of robot manipulators; Jacobian and inverse Jacobian relation; robot trajectory and task planning; dynamic formulation and computation of robot manipulators; robot programming and control systems. Prerequisite: 230.

**ECE 391-0 VLSI Systems Design** Design of CMOS digital integrated circuits, concentrating on architectural and topological issues. Tradeoffs in custom design, standard cells, gate arrays. Use of VLSI design tools on a small project. Prerequisite: 303.

**ECE 392-0 VLSI Systems Design Projects** Design of a cutting-edge VLSI chip. Teams of 5 to 10 students undertake a large circuit design problem, going from specification to VLSI implementation while optimizing for speed, area, and/or power. Group collaboration and engineering design. Prerequisite: 391.

**ECE 397-0 Special Topics in Electrical and Computer Engineering** Topics suggested by students or faculty and approved by the department.

**ECE 398-0 Electrical Engineering Design** Design of electrical and electronic devices, circuits, and systems by the application of the engineering sciences, economics, and Institute of Electrical and Electronics Engineers or other national standards. Prerequisite: senior standing.

**ECE 399-0 Projects** Seminar and projects for advanced undergraduates on subjects of current interest in electrical and computer engineering.

# Engineering Sciences and Applied Mathematics

The Department of Engineering Sciences and Applied Mathematics offers course work in applied mathematics and administers an undergraduate program leading to a BS in applied mathematics and a graduate program in applied mathematics.

The applied mathematics program is intended to provide the knowledge necessary for applying mathematical ideas and techniques to the problems that arise in engineering or science. It is expected that a student receiving a BS in applied mathematics would have the background for suitable employment in industry or for graduate study in either mathematics (pure or applied) or an engineering field, including computer science and operations research. To achieve these goals, the applied mathematics program is designed to be flexible and allow the student to concentrate a substantial part of the course work either in mathematics or one or more areas of application.

#### **Courses Primarily for Undergraduates**

**ES APPM 252-1,2,3 Honors Calculus for Engineers** Yearlong sequence; alternative to standard calculus sequence. Covers more material at a deeper level, with more applications. Satisfies same requirements as MATH 214-3, 215, 217, and GEN ENG 205-4.

**ES APPM 311-1,2 Methods of Applied Mathematics** Ordinary differential equations; Sturm-Liouville theory, properties of special functions, solution methods including Laplace transforms. Fourier series: eigenvalue problems and expansions in orthogonal functions. Partial differential equations: classification, separation of variables, solution by series and transform methods. Prerequisite: 252-3, MATH 221, or GEN ENG 205-4. ES APPM 311-3 Methods of Applied Mathematics:

**Complex Variables** Imaginary numbers and complex variables, analytic functions, calculus of complex functions, contour integration with application to transform inversion, conformal mapping. May be taken independently of 311-1,2. Prerequisite: 252-3, MATH 221, or GEN ENG 205-4.

**ES APPM 322-0 Applied Dynamical Systems** Exampleoriented survey of nonlinear dynamical systems, including chaos. Combines numerical exploration of differential equations describing physical problems with analytic methods and geometric concepts. Applications to mechanical, fluid dynamical, electrical, chemical, and biological systems. Prerequisites: 311-1,2 or equivalent, or consent of instructor.

**ES APPM 346-0 Modeling and Computation in Science and Engineering** Advanced techniques for initial value problems, differential algebraic systems, bifurcations, chaos, and partial differential equations. Applications drawn from different physical areas. Prerequisites: MATH 215, 217, and 221 *or* GEN ENG 205-4; PHYSICS 135-1,2 or equivalent; familiarity with a programming language; or consent of instructor.

**ES APPM 399-0 Projects** Special studies to be carried out under faculty direction. Credit to be arranged.

## **Environmental Engineering**

Environmental engineering is concerned with the interactions of people and environment, the applications of scientific knowledge to the understanding and analyses of these interactions, and the improvement of the quality of our environment. This undergraduate program provides an engineering and scientific basis for understanding contemporary environmental problems and approaches to their solutions, understanding the natural systems with which human activities must be compatible, and developing a grasp of engineering analysis and design for environmental control systems planning and design.

McCormick faculty members are engaged in research on physical, chemical, and biological processes for water supply, waste treatment, pollution control, and resource recovery; water resources; toxicology; environmental systems planning and design; chemistry and treatment of industrial wastes; land reclamation and contaminant effects on ecosystems.

Completion of the undergraduate degree program in environmental engineering prepares students to practice engineering at the entry level or to continue their education at the graduate level. It serves as preparation for the Fundamentals of Engineering (FE) examination and, with adequate experience, the Professional Engineer (PE) examination.

## Industrial Engineering and Management Sciences

Northwestern's industrial engineering students graduate with the skills needed to create, design, analyze, and improve the operation of complex organizational systems, e.g., financial systems, information systems, production systems, logistics, and transportation. All students acquire an understanding of statistics, economics, optimization, computing, and simulation techniques. Elective opportunities include courses in business management, advanced economics and mathematics, quality control and reliability, communications and information systems, and production and supply-chain management. Realistic (i.e., open-ended and ill-defined) problems are used to help students refine the application of these principles as well as their ability to work in teams and to communicate their results effectively. These are the experiences that employers find most valuable in our graduates regardless of the field they enter.

Many IE graduates eventually assume management positions. In preparation for such careers, students take full advantage of the additional academic, business, and leadership programs available at Northwestern: a major or minor in economics, the business basics certificate for engineers, the Undergraduate Leadership Program, the Business Institutions Program, study abroad, and the co-op program. The two-quarter senior design project allows students to integrate all of these experiences.

To learn more about the program, visit the department's Web site at www.iems.northwestern.edu.

#### **Courses Primarily for Undergraduates**

#### Probability and Statistics

**IEMS 201-0 Introduction to Statistics** Collecting data; summarizing and displaying data; drawing conclusions from data; probability background, confidence intervals, hypotheses tests, regression, correlation. Not open to industrial engineering majors.

**IEMS 202-0 Probability** Introduction to probability theory and its applications. Random variables and distributions including binomial, Poisson, exponential, and normal. Monte Carlo simulation. Examples in reliability, inventory, finance, and statistics. Homework, labs, and exams. Prerequisite: MATH 215 or equivalent.

**IEMS 303-0 Statistics I** Statistical methods for data analysis. Descriptive plots and statistics; observational studies and experiments; confidence interval estimation; hypothesis testing; regression and correlation. Homework, labs, and project. Prerequisite: 202 or equivalent.

**IEMS 304 Statistics II** Advanced statistical methods. Multiple regression; analysis of variance; design and analysis of single-factor and multifactor experiments; categorical data; nonparametric methods. Homework and project. Prerequisite: 303 or equivalent.

#### **IEMS 305 Statistical Methods for Quality Improvement**

Methods for controlling and improving industrial processes. Control charts; process capability; gage repeatability and reproducibility. Multifactor experiments; screening experiments; robust design. Homework, labs, and project. Prerequisite: 303 or equivalent.

**IEMS 306 Decision Analysis** Theory and practice of analyzing decisions in the public and private sectors. Multiple objectives; influence diagrams; decision trees; sensitivity analysis; probability assessment; utility; human biases. Problems, cases, and projects. Prerequisite: 202 or equivalent.

**IEMS 307 Quality Improvement by Experimental Design** Methods for designing and analyzing industrial experiments. Blocking; randomization; multiple regression; factorial and fractional factorial experiments; response surface methodology; Taguchi's robust design; split plot experimentation. Homework, labs, and project. Prerequisite: 303 or equivalent.

#### **Operations Research**

**IEMS 310-0 Operations Research** Survey of operations research techniques. Linear programming, decision theory, stochastic processes, game theory. Not open to industrial engineering majors.

**IEMS 313-0 Deterministic Models and Optimization** 

Formulation and solution of applicable optimization models, including linear, integer, nonlinear, and network problems. Efficient algorithmic methods and use of computer modeling languages and systems. Homework, exams, and project. Prerequisite: GEN ENG 205-3.

**IEMS 315-0 Stochastic Models and Simulation** Modeling and analysis of dynamic systems subject to uncertainty. Integrated approach to stochastic analysis and simulation. Rough-cut analysis of queuing systems. Homework, exams, computer labs, and project. Prerequisites: 202, 303, and GEN ENG 205-1.

## **IEMS 317-0 Discrete-Event Systems Simulation**

Computer simulation of discrete-change systems subject to uncertainty. Choice of input distributions; development of models; design and analysis of simulation experiments. Miniprojects, exams, and computer labs. Prerequisites: 303; 310 or 315; and ECE 230.

#### **General Business Management**

**IEMS 224-0 Principles of Accounting and Finance** Introduction to accounting and finance for engineers. Doubleentry system; accounting cycle; financial statement analysis; assets, liabilities; flexible budgets; job-process costing. Homework, lab presentation, and group project.

**IEMS 325-0 Engineering Entrepreneurship** Overview of the entrepreneurial process from an engineering perspective. Idea generation, planning, financing, marketing, protecting, staffing, leading, growing, and harvesting.

171

Students write startup business plans. Lectures, guest speakers, and case studies. Prerequisite: One course in accounting or finance such as 224, 326, or ECON 260.

**IEMS 326-0 Economics and Finance for Engineers** Principles of corporate finance; financial decisions of firms; value; risk and return; investment and capital budgeting decisions under certainty and uncertainty; performance evaluation. Homework and exams. Prerequisites: MATH 215; basic understanding of probability and economics recommended.

## Organization Theory, Behavioral Science, and Technology Management

**IEMS 340-0 Field Project Methods** Use of field research methods to solve management problems. Assignments focus on individual student projects. Students define projects, design field studies and pilot tests of data collection instruments, and present results. Prerequisite for non-majors: consent of instructor.

**IEMS 342-0 Organizational Behavior** Manager's view of tools available to recruit, develop, appraise, compensate, organize, and lead a team going through change. Application of psychological principles relating to human dynamics, motivation, teams, power, and organizational culture. Lectures, guest speakers, and exams. Prerequisite: none, but work experience recommended.

**IEMS 344-0 Information Technology in Manufacturing** Overview of information technology used in the hightechnology manufacturing environment. Integration of people, business processes, manufacturing processes, and information technology. Prerequisite: none, but work experience recommended.

## **Economics and Financial Decisions**

**IEMS 373-0 Financial Engineering I** Financial markets, derivative securities, risk management, mathematical models in finance. Foreign exchange, debt, equity, commodity markets. Investing, trading, hedging, arbitrage. Forwards, futures, options, swaps, exotic derivatives. Models of price dynamics, binomial model, introduction to Black-Scholes theory and Monte Carlo simulation. Homework, projects, and guest speakers. Prerequisites: 315, 326, MATH 215, ECE 230, or equivalent, or consent of instructor.

#### **Production and Logistics**

#### IEMS 381-0 Supply-Chain Modeling and Analysis

Application and development of mathematical modeling tools for the analysis of strategic, tactical, and operational supply-chain problems including facility location, customer assignment, vehicle routing, and inventory management. Related topics including the role of information and decision support systems in supply chains. Homework, exams, and project. Prerequisite: 313 or 310.

#### **IEMS 382-0 Production Planning and Scheduling**

Applications of operations research methods to practical problems of production planning and inventory control. Forecasting; aggregate planning; deterministic and stochastic inventory models; MRP; JIT; variability; scheduling in production and service systems. Case studies, homework, and exams. Prerequisites: 302; 310 or 313.

## Senior Design Project

## IEMS 390-1,2 Systems Project Management I, II

1. Introduction to systems problems and methods. Small group development of potential classwide projects to be carried out the following quarter. Identifying projects, team skills, presenting plans and proposals. Prerequisites: 340 and senior standing. 2. Project management methods applied to analysis and design of a complex real-world system. Students choose and carry out a single, classwide project. Planning, organizing, staffing, directing, and controlling; working with clients and stakeholders. Prerequisite: 390-1.

## IEMS 391-1,2 Industrial Engineering Design Project

 Case studies and small-scale projects involving application of operations research techniques to complex-decisions problems. Mathematical modeling, optimization, and policy analysis in public and private sector systems. Written and oral presentations of analyses. Prerequisites: 313 and 315.
 Large-scale, open-ended team projects from selected fields of industrial engineering. Systems approach requiring establishment of objectives and criteria, analysis and synthesis of alternatives, feasibility, trade-offs, testing, and evaluation. Written and oral reports. Prerequisites: senior standing; 313 and 315 for industrial engineering majors; 310 for manufacturing engineering majors.

#### Special Topics

**IEMS 395-0 Special Topics in Industrial Engineering** Topics suggested by students or faculty members and approved by the department.

**IEMS 399-0 Independent Study** Independent study on an industrial engineering topic supervised by a faculty member.

## Manufacturing Engineering

The manufacturing engineering program prepares students to design, manage, control, and operate complex manufacturing systems. An interdisciplinary degree, it exposes students to all phases of manufacturing, from product design and development to manufacturing, from marketing to distribution, and from vendor management to information systems and control. Graduates find employment in traditional manufacturing firms, new economy startups, and state-of-the-art consulting ventures.

Course work in manufacturing engineering includes the core areas of engineering economics, statistical analysis, quality engineering and experimental design, production planning, information systems, material selection, product design, and process design and control. Through extensive use of teamwork, students also develop people management skills. Technical electives are chosen from manufacturingrelated areas such as manufacturing management, computeraided design, microelectronic systems, manufacturing logistics, transportation, and information systems. A twoquarter senior design project is required.

Students interested in the manufacturing engineering degree can obtain an additional engineering degree through dual-degree programs available with industrial engineering, mechanical engineering, computer engineering, and electrical engineering.

To learn more about mechanical engineering, visit the department Web site at www.mfe.northwestern.edu.

## Materials Science and Engineering

Materials science and engineering is a discipline that has expanded rapidly in response to growing demand for materials that make improved use of existing resources or are needed for new technologies. The program at Northwestern is broad-based, offering educational and research opportunities in polymer science, ceramics, metallurgy, surface science, biomaterials, nanomaterials, and electronic materials. Engineers, scientists, and technologists who work on these different materials all apply basically the same scientific principles governing the interrelation of processing, structure, properties, and material performance. A key theme of the Northwestern program is the integration of these principles in the systematic design of new materials.

The Department of Materials Science and Engineering offers an undergraduate program leading to the BS degree. The department also participates in the co-op and BS/MS programs. The curriculum centers on basic engineering and materials course work but also provides the flexibility to focus on different areas of concentration as described below. A student's educational experience is broadened by courses in the humanities, arts, sciences, and other areas of engineering. The undergraduate program culminates in the senior project, in which each student carries out a research/development project with a faculty member and his or her research group.

Students who complete the BS program will be well prepared for professional work or graduate study in the application, production, processing, or research and development of materials. Graduates find opportunities in materials science and engineering in many other areas, since materials expertise is important in various engineering fields as well as in medicine, physics, and chemistry.

#### Areas of Concentration

The undergraduate program at Northwestern offers a close relationship between students and faculty. Every effort is made to tailor specific programs to needs and interests. Several broad areas of concentration are described below. Students are encouraged to create other areas that fit particular interests.

## Biomaterials

The growth of biotechnology has stimulated interest in the interface of the life sciences and materials science. The field of biomaterials spans three broad areas: biomedical implant materials to replace natural structures; biomimetic materials applying biological concepts to the design of new engineering materials; and application of materials science principles to the understanding of structure and function in biological systems.

#### Electronic Materials

As microelectronics enters the era of very large-scale integration, materials scientists face new challenges in developing materials and processes for integrated circuits with components of micrometer dimensions. New scientific principles, materials fabrication techniques, and improved instrumentation will be needed to exploit electronic-level structure/property relations in these devices and their components. New electronic materials must be developed to meet ever-increasing requirements such as the exciting area of high-Tc superconductivity.

#### Metals and Ceramics

The ability to design increasingly higher-strength alloys allows for lighter structures, and higher-temperature materials provide energy efficiency. Heat-treatable and toughened ceramics exploit advanced knowledge of solidstate phase transformations and reactions. Exciting developments are taking place in high-performance composite combinations of these and other materials.

#### Nanomaterials

The area of nanomaterials, focusing on materials with feature sizes in the range of 1 to 100 nanometers, is an important research topic that will become increasingly emphasized as nanotechnology industries develop. Examples of nanomaterials include new ultrahigh strength materials with nanometer-range structural features and new structures designed and self-assembled atom by atom or molecule by molecule. Machines smaller than the tip of a pin can be built using either semiconductor materials processing or biologically inspired processing technology. This specialization is designed to give students the knowledge needed to work at the nanoscale, including design and synthesis, characterization, and theory/modeling/ simulation of nanomaterials.

#### **Polymeric Materials**

Synthetic polymers offer the engineering community an ever-expanding array of materials having properties that are tailored by chemical and physical processing. New developments are opening up applications for polymers as high-strength, low-weight materials; optoelectronic components; and key materials in other revolutionary areas. The basic understanding of engineering properties in terms of multilevel microstructure is essential for the full utilization of polymers.

173

#### Surface Science

A solid communicates with the outside world through its surface. Wear, corrosion, and passivation are well-known surface processes. Mechanical properties of materials depend critically on composition at grain boundaries (internal surfaces), surface treatments, and the environment. The surface scientist must not only be able to determine the properties of surfaces or interfaces but also be able to control them.

#### Laboratories and Facilities

Materials science and engineering demands sophisticated experimental techniques for the preparation and characterization of advanced materials. The undergraduate program makes heavy use of state-of-the-art laboratory facilities in core courses, technical electives, and senior projects.

Materials preparation and processing equipment is available for all classes of materials, including an advanced crystal growth facility in a clean room environment for preparing single crystals of metals, oxides, alkali halides, and semiconductors. Investigation of complex microstructures employs a wide array of microscopy, diffraction, and microanalysis techniques. This features a unique combination of instruments (cold field-emission transmission electron microscope, atom-probe field-ion microscopes, scanning tunneling microscopes), providing atomic resolution imaging and chemical analysis, complemented by an extensive surface analytical laboratory. Characterization of material properties employs an advanced mechanical testing facility featuring static and dynamic loading under controlled temperature and environment. Specialized facilities measure electrical, spectroscopic, magnetic, and photonic properties. Computer laboratories address thermodynamic modeling and simulation of microstructural evolution, with application in materials design.

#### **Courses Primarily for Undergraduates**

**MAT SCI 101-0 Modern Materials and Society** Introduction to materials — how they function, how they are made, the devices they enable, and their impact on society. Role of materials developments in technological innovation and global competitiveness. Prerequisites: high school mathematics and science background. Fulfills Weinberg College distribution requirements. Not intended for engineering majors.

**MAT SCI 190-0 Materials Science and Engineering Freshman Projects** Laboratory-oriented, with research projects emphasizing use of the scanning electron microscope and other modern apparatus; correlation of structure with other properties of materials. Lectures, laboratory.

**MAT SCI 201-0 Principles of the Properties of Materials** Introduction to atomic and molecular organization in solids, with emphasis on structure-property relations in ceramics, electronic materials, metals, and polymers. Prerequisite: CHEM 102.

#### MAT SCI 203-0 Microstructure and Engineering Proper-

**ties of Materials** Processing, microstructure, and properties of engineering materials with emphasis on structural materials such as concrete, steel, wood, glass, and ceramics. Prerequisites: CHEM 102 and MATH 214-3.

#### MAT SCI 301-0 Chemical Aspects of Engineering

**Materials** Equilibrium and nonequilibrium development of microstructures. Mechanical behavior of metals, ceramics, and polymers. Corrosion and stability of engineering materials. Materials processing. No credit for materials science majors. Prerequisite: CHEM 342-1 or CHEM ENG 211.

**MAT SCI 314-0 Thermodynamics of Materials** Classical and statistical thermodynamics; entropy and energy functions in liquid and solid solutions, and their applications to phase equilibria. Lectures, problem solving.

MAT SCI 315-0 Phase Equilibria and Diffusion in Materials Application of thermodynamics to ternary phase equilibria. Defects and diffusion in solids. Interdiffusion. Short-circuit diffusion. Defects and transport in ionic solids. Lectures, problem solving. Prerequisite: 314 or equivalent.

**MAT SCI 316-1,2 Microstructural Dynamics** Principles underlying development of microstructures. Defects, diffusion, phase transformations, nucleation and growth, thermal and mechanical treatment of materials. Lectures, laboratory. Prerequisite: 315 or equivalent.

**MAT SCI 317-0 Materials in Manufacturing** Ways in which structure-property relationships of engineering materials determine and are affected by the processes employed in their manufacture. Not open to materials science majors. Prerequisite: 201 or equivalent.

**MAT SCI 322-0 Kinetics of Heterogeneous Reactions** Rates and mechanisms of heterogeneous gas-solid, liquidsolid, and solid-solid reactions such as carburization, reduction, oxidation, corrosion, stress-corrosion, and heterogeneous structural transformations. Role of microscopic and macroscopic defects.

**MAT SCI 331-0 Physical Properties of Polymers** Different kinds of polymeric materials. Relationships between structure and physical properties; rubber elasticity, the glassy state, crystallinity in polymers. Lectures, laboratory. Prerequisites: 201 or equivalent; 314 or CHEM 342-1.

**MAT SCI 332-0 Mechanical Behavior of Solids** Plastic deformation and fracture of metals, ceramics, and polymeric materials; structure/property relations. Role of imperfections, state of stress, temperatures, strain-rate. Lectures, laboratory. Prerequisites: 316-1,2; 316-2 may be taken concurrently.

**MAT SCI 333-0 Composite Materials** Introduction to ceramic-, metal-, polymer-matrix composites for structural applications. Emphasis on structure (reinforcements, architecture), properties, processing, role of interface. Prerequisites: 316-1,2, and 332.
**MAT SCI 340-0 Ceramic Processing** Steps in production of fired ceramic articles. Powder preparation and characterization, compact formation, slip casting, extrusion and injection molding; firing, liquid-phase and solid-state sintering. Lectures, laboratory. Prerequisite: 316-1 or equivalent.

**MAT SCI 341-0 Introduction to Modern Ceramics** Applications of ceramic materials, with emphasis on structure (bond, crystal, glass, defect, micro-); properties (thermal, electrical, optical, magnetic, mechanical); and processing (powders, forming, densification). Prerequisites: 316-1,2 or consent of instructor.

MAT SCI 351-1,2 Introductory Physics of Materials

Quantum mechanics; applications to materials and engineering. Band structures and cohesive energy; thermal behavior; electrical conduction; semiconductors; amorphous semiconductors; magnetic behavior of materials; liquid crystals. Lectures, laboratory, problem solving. Prerequisites: GEN ENG 205-4 and PHYSICS 135-2,3.

**MAT SCI 355-0 Electronic Materials** Principles, models, and characterization of semiconductor materials. Crystal growth and doping. Diffusion, epitaxy, and monolithic processes. Current transport, nonequilibrium processes, thin films, low-mobility materials, and interfaces. Prerequisite: 351-1, ECE 381, or consent of instructor.

**MAT SCI 360-0 Introduction to Electron Microscopy** Theories and practice involved in application of scanning electron microscopy and transmission electron microscopy. Lectures, laboratory. Primarily for undergraduates and for graduate students in other departments. Prerequisites: 201 and PHYSICS 135-2,3 or equivalent.

**MAT SCI 361-0 Crystallography and Diffraction** Elementary crystallography. Basic diffraction theory; reciprocal space. Applications to structure analysis, preferred orientation. Film and counter techniques. Lectures, laboratory. Prerequisites: GEN ENG 205-4 and PHYSICS 135-2,3.

**MAT SCI 362-0 Point, Line, and Planar Imperfections** Introduction to point defects, dislocations, and internal interfaces in crystalline solids. Interactions among point, line, and planar imperfections. Metals, ionic solids, semiconductors. Prerequisite: 315.

MAT SCI 380-0 Introduction to Surface Science and Spectroscopy Surface spectroscopy, including Auger spectroscopy, photoemission, and LEED. Surface dynamics and thermodynamics. Electronic properties of surfaces and interfaces. Gas-surface interactions. Prerequisite: 351-1 or equivalent.

**MAT SCI 385-0 Image Analysis** Quantitative analysis of microstructures in materials from measurements on twodimensional sections, transmission micrographs, and scanning electron micrographs.

**MAT SCI 390-0 Materials Design** Analysis and control of microstructures. Quantitative process/structure/property/ performance relations with case studies. Computer lab for

modeling multicomponent thermodynamics and transformation kinetics. Prerequisites: 315 and 316-1,2 or consent of instructor.

**MAT SCI 391-0 Process Design** Processing of materials. Design and analysis of experiments to identify and optimize key parameters to control properties and performance. Resolving conflicting requirements. Statistical process control.

**MAT SCI 394-0 Honors Project in Materials Science** Independent study and/or research linked to 396. Comprehensive report on a specific area of modern materials science and engineering. Prerequisite: registration in department honors program.

**MAT SCI 395-0 Special Topics in Materials Science and Engineering** Topics suggested by students or faculty and approved by the department.

**MAT SCI 396-1,2 Senior Project in Materials Science and Engineering** To be taken in two consecutive quarters. Independent basic or applied research project, conceived and performed under the direction of a department faculty member. Prerequisite: senior standing in materials science program.

MAT SCI 398-0 Introduction to Plasma Science and Processing Technology Plasma production, plasma properties (microscopic and macroscopic); plasma characterization, transport phenomena, plasma processing of powders and advanced materials.

**MAT SCI 399-0 Special Problems in Materials Science** Individual problems, including library and design work; comprehensive report on a specific phase of modern materials science. Credit to be arranged.

#### **Mechanical Engineering**

The Department of Mechanical Engineering offers a broad range of programs leading to the bachelor of science degree in mechanical engineering.

Mechanical engineering has always meant engines and machinery, but the character of modern engines and machinery has changed enormously because of the everincreasing demands of performance, compactness, reliability, and productivity. The early devices were built by ingenious mechanics, individuals who possessed the knowhow to reduce these ideas to practice. Today, traditional know-how and creative ability are as necessary as ever but no longer sufficient in an increasingly competitive world. It has become necessary also to know why things occur and thus to be able to exert the proper guidance at the earliest stages of planning. Furthermore, in a world of finite resources and in a society increasingly aware of its environment, mechanical engineers must cope with not only the traditional concerns of efficiency and safety but also the undesirable effects of pollution. Clearly, the tools that future mechanical engineers need to possess must be

more sophisticated to allow the important but ever-subtle effects to be recognized and controlled.

Mechanical engineering plays a dominant role in a wide spectrum of industries, among them the transportation industry (automotive, rail, air, and marine), heavy machinery (machines producing other machines), the power industry, the environmental industry (heating, ventilation, and air-conditioning), robotics, the light precision-machine enterprises (optical, prosthetic devices, mechanical instruments, and the like), and numerous commercial product industries. Preparation for a career in mechanical engineering requires a basic understanding of the mathematical, physical, and engineering principles essential to planning, designing, and manufacturing new equipment.

The curriculum in mechanical engineering provides a broad fundamental education preparing students for direct entry into industry as well as further professional study. The first part of the curriculum is devoted to mathematics, physics, and chemistry. With this background, fundamental mechanical engineering subjects are studied. These include dynamics, solid mechanics, fluid mechanics, and thermodynamics followed by specialized subjects such as manufacturing, heat transfer, and automatic control. During the final two years, design courses, laboratory courses, and project courses allow students to acquire a taste for the complex task of designing, analyzing, and building a piece of "hardware." In particular, students become aware of the coupling between conceptual design, subsequent analysis (mathematical modeling), manufacturing, systematic experimentation, and final testing. Supporting courses in allied fields of science and engineering broaden the technical proficiency of mechanical engineering, while the elective courses in social sciences, fine arts, history, and philosophy enlarge their background in the problems of humanity.

#### Areas of Specialization

The program in mechanical engineering is designed to appeal to students with a wide variety of interests and professional goals. By an appropriate choice of elective courses, students can develop a highly personalized curriculum.

Some areas of specialization are computer-aided design/ computer-aided manufacturing, systems and control, robotics, tribology, and fluid mechanics. In addition, there are special options — energy, intelligent mechanical systems, biomedical engineering, solid mechanics, design, nanotechnology/microelectromechanical systems, and manufacturing. The energy option emphasizes the mechanical aspects of energy conversion and management. The intelligent mechanical systems option focuses on the design of devices featuring mechanical hardware interfaces to electronic hardware and software. The biomedical engineering option is open to students interested in the biological and medical applications of mechanical engineering procedures. Students in this option can also satisfy the entrance requirements of medical schools. The solid mechanics option focuses on the study of stress and strain in solid bodies along with the application of computational methods for stress analysis. The design option concentrates on product design with related conceptual and manufacturing processes. The nanotechnology/MEMS option focuses on science and engineering at nanometer and micrometer length scales, including properties of materials and design and fabrication of devices. The manufacturing option is directed toward planning and selecting manufacturing methods, design for manufacture, computer-aided flexible automation and robotics, and increasing the efficiency and productivity of current and emerging manufacturing technologies.

#### Facilities

A detailed description of facilities in the reconstructed mechanical engineering laboratories is available at the department office.

#### **Courses Primarily for Undergraduates**

**MECH ENG 201-0 Mechanics I** Equivalent force systems. Equilibrium of rigid bodies. Distributed forces and centers of gravity. Kinematics of rigid bodies in planar motion. Prerequisites: PHYSICS 135-1 and concurrent registration in MATH 215.

**MECH ENG 202-0 Mechanics II** Dry friction. Kinetics of rigid bodies in planar motion. Kinetics of particles. Moments of inertia of rigid bodies. Prerequisite: GEN ENG 205-4.

**MECH ENG 220-0 Thermodynamics I** Basic definitions; Zeroth Law and the meaning of temperature; the First Law applied to flow and nonflow processes; the Second Law and its applications; properties of pure substances; equations of state, the Third Law of Thermodynamics, and introduction to cycles. Prerequisites: GEN ENG 205-3 and concurrent registration in MATH 215.

**MECH ENG 224-0 Experimental Engineering I** Modern electronics; analog and digital circuit construction and conversion. Modern data acquisition involving temperature measurements, control of stepper motors, transient heat transfer, fluid mechanics, deformation of beams. Prerequisites: 220, 241, ECE 270, and MECH ENG 262 or CIV ENG 216.

**MECH ENG 240-0 Introduction to Mechanical Design and Manufacturing** Introduction to strategy and methods of designing, manufacturing, and testing of mechanical products. Material properties and selection methodology, engineering drawing and CAD, and simple manufacturing processes. Prerequisite: MAT SCI 201 and concurrent registration in 262 or CIV ENG 216.

**MECH ENG 241-0 Fluid Mechanics I** Fundamentals of fluid mechanics. Properties and statics of fluids. Kinematics and dynamics of fluid motion — continuity, momentum, and energy equations. Dimensional analysis, flow in closed conduits. Prerequisites: GEN ENG 205-4.

**MECH ENG 262-0 Stress Analysis and Finite Elements I** Analytical and numerical methods for study of strains, stresses, and deformations in solids, with applications to design of mechanical components subjected to static and repeated loads. Prerequisite: GEN ENG 205-3.

**MECH ENG 314-0 Theory of Machines** — **Dynamics** Three-dimensional kinematics: rotation axes and mechanism analysis, rotation matrices and Euler's angles for rigid bodies. Three-dimensional kinetics: dynamics of particles, central force problems, dynamics of rigid bodies, rotational inertia matrices and principal axes, dynamics of mechanisms, the gyroscope and other torque-free problems. Prerequisite: 202.

**CIV ENG 314-0 Mechanics of Crustal Processes** See Civil Engineering.

**MECH ENG 315-0 Theory of Machines** — **Design of Elements** Factors influencing the proportioning of machine elements — stresses, deformations, and failure criteria as applied to shafts, springs, belts, bearings, gears. Lectures, laboratory. Prerequisite: 240 or CIV ENG 216.

**CIV ENG 327-0 Finite Element Methods in Mechanics** See Civil Engineering.

**MECH ENG 333-0 Introduction to Mechatronics** Introduction to microprocessor-controlled electromechanical systems. Interfacing sensors and actuators to computers, electrical and mechanical prototyping, dissection of a commercial product. Final team project. Prerequisite: GEN ENG 205-3 or consent of instructor.

MECH ENG 340-1,2,3 Computer-Integrated

Manufacturing Use of computers to improve productivity and reduce costs in the manufacture of discrete parts and assemblies.
1. Manufacturing processes: Analysis and evaluation of process usage in the contemporary manufacturing environment. Prerequisite: 240 or consent of instructor.
2. CAD/CAM: Geometric modeling, dimensioning systems, tolerances, design for manufacture, programming of machine tools. Prerequisites: 340-1; 262 or CIV ENG 216;

or consent of instructor. **3.** Manufacturing automation: sensors, actuators, and computers for automation; principles of computer control; programmable logic controllers; robotic devices; assembly automation. Prerequisite: 340-2 or consent of instructor.

**MECH ENG 342-0 Mechanics of Cutting and Forming** Introduction to plasticity theory applications to simple cutting and forming processes. Process analysis and design: force estimation, friction and redundant work effects, temperature-generated defects, and process and equipment limitations. Prerequisites: 262 or CIV ENG 216 and senior standing.

**MECH ENG 346-0 Introduction to Tribology** Fundamentals of surface contact: surface topography, asperity contact, interfacial phenomena. Friction theories and wear mechanisms. Temperatures in sliding contacts. Hydrodynamic, hydrostatic, elastohydrodynamic, and boundary lubrication.

**MECH ENG 358-0 Experimental Engineering II** Optical metrology. Stress analysis, fluid flows, combustion, dynamics, and control. Use of optical interferometry, anemometers and pitot tubes, accelerometers, and other advanced measurement devices.

**MECH ENG 359-0 Reliability Engineering** Probability concepts and random variables. Failure rates and reliability testing. Wear-in, wear-out, random failures. Probabilistic treatment of loads, capacity, safety factors. Reliability of redundant and maintained systems. Fault tree analysis. Prerequisite: GEN ENG 205-4.

**MECH ENG 362-0 Stress Analysis** Theory of elasticity: elastic stability, principle of minimum potential energy, Rayleigh-Ritz methods. Introduction to finite element methods of stress analysis: computer implementation and use of commercial codes. Structural analysis of rods, beams, columns, and plates. Prerequisite: 262 or CIV ENG 216.

**MECH ENG 363-0 Mechanical Vibrations** Analysis of vibrations in single- and multidegree-of-freedom systems. Free and forced vibrations with various types of damping. Response to steady-state and transient excitations. Prerequisite: 202 and GEN ENG 205-4.

**MECH ENG 365-0 Finite Elements for Stress Analysis** Introduction to the finite-element method for stress analysis, with emphasis on linear elasticity. Computer implementation of finite-element techniques: finite-element code development and modification; use of commercial codes. Prerequisite: 262, MATH 215, or CIV ENG 216.

**MECH ENG 366-0 Finite Elements for Design and Optimization** Numerical methods for interaction and optimal CAD. Fully stressed design; design sensitivity analysis and descent methods; optimality criteria to automated design. Prerequisites: senior standing and 365 or consent of instructor.

**MECH ENG 370-0 Thermodynamics II** Elementary classical thermodynamics, application of first and second laws of thermodynamics to power and refrigeration cycles, mixtures and solution, thermodynamic relations, chemical reactions, phase and chemical equilibrium. Prerequisite: 220.

**MECH ENG 373-0 Engineering Fluid Mechanics** Laminar and turbulent duct flows. Boundary layers and potential flows. Lift and drag forces. Thermodynamics and mechanics of compressible flow. Nozzle flows and choking. Wave motion and shock waves. Applications to fluid machinery. Lab required. Prerequisite: 220, 241, or equivalent.

**MECH ENG 377-0 Heat Transfer** Fundamentals of heat transfer by conduction, convection, and radiation. Steady and transient heat conduction in solids. Forced and free convection in fluids. Properties of thermal radiation. Radiation heat transfer between solids. Solar radiation. Prerequisite: 241.

**MECH ENG 379-0 Elements of Combustion Engineering** Introduction to combustion processes, providing an understanding of flame processes as they relate to efficiency and pollution due to propulsion and power generating systems. Diffusion and premixed flames, problems of ignition, quenching, flammability limits, and detonation. Prerequisite: senior standing in mechanical engineering or consent of instructor.

**MECH ENG 381-0 Introduction to Microelectromechanical Systems (MEMS)** Introduction to microelectromechanical devices with an emphasis on their manufacturing and mechanical behavior. Materials properties, microfabrication technology, mechanical behavior of microstructures, design, and packaging. Case studies on sensors, wireless communications, fluidic systems, microengines, and biological devices. Prerequisites: CIV ENG 216 or consent of instructor.

#### **MECH ENG 390-0 Introduction to Dynamic Systems**

Modeling the dynamic behavior of physical systems. Concepts of causality, dependent and independent storages, and state. Introduction to bond graphs. Generation of state equations; analytical and computer simulation of system behavior. Application to problems of engineering interest. Prerequisite: GEN ENG 205-4.

MECH ENG 391-0 Fundamentals of Control Systems

Mathematical modeling of automatic control systems. Open-loop and closed-loop control. Laplace transform techniques and transfer functions. Stability. Root locus technique, Bode plots, Nyquist criterion. Approaches to control system design, including PID and lead-lag compensation. Prerequisite: 390 or consent of instructor.

**MECH ENG 395-0 Special Topics in Mechanical Engineering** Topics suggested by students or faculty members and approved by the department.

**MECH ENG 398-0 Engineering Design** Product or system design projects carried out by small student groups. Project definition, conceptual and detailed design, evaluation, and documentation. Prerequisite: senior standing.

**MECH ENG 399-0 Projects** Special studies to be done under faculty direction. Credit to be arranged.

# **Medill School of Journalism**

Journalists perform a vital function in a democracy whose existence depends on an informed electorate and in a world that depends on effective communication. The Medill School of Journalism seeks to develop professional writers and editors who are broadly educated in the liberal arts and sciences; who are technically skilled; who understand the historical underpinnings of a free press in America; and who appreciate the social, legal, and ethical issues of the news media in modern-day society.

The core journalism courses — which make up 25 percent of the undergraduate curriculum — are designed to prepare students for careers in the news media, with emphases on writing, reporting, editing, and graphics.

During the junior year, students participate in Teaching Media (the Teaching Newspaper, Teaching Magazine, or Teaching Television program), receiving course credit for an academic internship at 1 of about 50 newspapers located in 25 states or at various magazines or television stations. These programs offer a professional laboratory in which students study under the supervision and guidance of editor-instructors monitored and supervised by Medill faculty. Students who encounter financial hardship while on these programs may apply to the school's Benjamin H. Baldwin Fund for some support.

The nonjournalism courses — about 75 percent of the undergraduate curriculum over four years include a wide selection of social and natural sciences, arts, and humanities classes, so that students will have the background to understand and communicate the world's events.

Many undergraduates find media jobs in print, broadcast, or online journalism; public relations; or allied fields directly after graduation. Others pursue a Medill master's degree. The graduate program in editorial journalism offers concentrated study in reporting and writing, broadcast journalism, new media, and magazine publishing. The school's other graduate program, integrated marketing communications, has specialized concentrations in advertising and sales promotion, public relations, and direct, database, and ecommerce marketing. Students are admitted to a graduate program only if their undergraduate course work indicates the aptitude necessary for rigorous specialized education.

Through the Accelerated Master's Program, Medill allows a few students each year to earn both bachelor's and master's degrees in editorial journalism in less than five years. Students apply to this program in their junior year; those accepted into the highly selective program must show academic excellence and the promise of success in journalism.

Medill has awarded more than 14,000 degrees since its founding in 1921; the school's graduates stand among the leaders of the profession. Medill's 900 students — 600 undergraduates and 300 graduate students representing nearly every state in the union and several countries — take pride in the school's ranking as one of the nation's preeminent journalism centers.

For more information, see the school's Web site at www.medill.northwestern.edu.

# **Academic Policies**

# Requirements for the Degree of Bachelor of Science in Journalism

1. A minimum of 45 units must be completed on the college level.

2. Students must take the final 23 units (of 45 required for graduation) at Northwestern and complete the last three quarters of work while enrolled at Medill.

3. At least 11 but no more than 12 units in journalism may be counted toward the 45 course units required for graduation; 33 of the 45 must be in areas other than journalism. Students with more than 45 units may take additional journalism units.

4. Required journalism courses:

Freshman year

201 Editing and Writing the News

202 History and Issues of Journalism

#### Sophomore year

301 Newswriting and Reporting (prerequisite: 201) Late sophomore year and/or junior year — Option A, B, or C (choose one)

#### Option A

340 Newspaper Editing and Writing (prerequisite: 301)

341 News and New Media (prerequisite: 340, concurrent registration in 340, 355, or 365)

345 Teaching Newspaper (TN): Reporting (1 or 2 units; prerequisites: 340, 341)

346 Teaching Newspaper: Editing (1 or 2 units)

# Option B

350 Magazine Writing (prerequisite: 301)

351 Magazine Editing (prerequisite: 301)

355 Teaching Magazine (TM): Writing (2 units; prerequisites: 350, 351)

356 Teaching Magazine: Editing

#### Option C

360 Broadcast Writing (prerequisite: 301)

361 Television News Editing (prerequisite: 360)

365 Teaching Television (TT): Broadcast News (2 units; prerequisite: 361)

366 Teaching Television: Editing *Senior year* 

370 Law and Ethics of Journalism

In addition, seniors take 2 or 3 elective journalism courses from the following list. (Journalism electives taken before the senior year are counted in place of senior-year electives.)

340 Newspaper Editing and Writing (required for TN)

341 News and New Media (required for TN)

350 Magazine Writing (required for TM)

351 Magazine Editing (required for TM)

360 Broadcast Writing (required for TT)

361 Television News Editing (required for TT)

367 Broadcast Reporting (prerequisite: 360)

368 Television News Documentary (prerequisite: TT or 367)

373 Investigative Journalism

374 Analytical Reporting

375 Literary Journalism

376 Print Media Design (prerequisite: 340 or 351)

377 Reporting across Race and Culture

(also open to juniors)

390 Special Topics

399 Independent Study

Journalism course electives from the following list are also open to sophomores and juniors: 303 Advertising

304 Direct Marketing

388 Internship (no credit)

Students may take both 303 Advertising and 304 Direct Marketing only if 1 of these courses is taken as a 12th journalism unit. Of the 11 required journalism units for the bachelor of science in journalism degree, 10 must be in editorial courses.

Seniors may take courses in any area of journalism, regardless of the Teaching Media program they did in the junior year. For example, a Teaching Television student may take magazine courses, newspaper courses, investigative journalism, additional television courses, or a combination of courses.

5. Three units of literature are required. They may be from any department in the University dealing with literature, either in English or in a foreign language.

6. Three units of mathematics/science/logic are required. At least one of the required courses must be taken from this list: ANTHRO 362-1,2,3 Quantitative Methods of Analysis; BME 220 Introduction to Biomedical Statistics; MMSS 292-1,2,3 Mathematical Methods in the Social Sciences: First Year; MATH 210-1,2 Mathematics for the Behavioral Sciences; POLI SCI 310 Elementary Statistics for Political Research, 311 Methods of Political Research, 312 Logic of Political Inquiry, and 315 Introduction to Positive Political Theory; PSYCH 201 Statistical Methods in Psychology; SOCIOL 303 Analysis and Interpretation of Social Data; and any course in the Department of Statistics.

The other 2 mathematics/science/logic courses may be from the above list or from any of the following core subjects: astronomy, biochemistry, biological sciences, chemistry, computer science, geography, geological sciences, logic (philosophy), mathematics, and physics.

7. Three units of history are required. At least 1 course must be in U.S. history, and at least 1 must be in non-U.S. history.

8. Students are required to take 1 American government course in the Department of Political Science and 1 course in international relations or international studies.

9. One unit of religion, philosophy, or ethics is required, not including courses in logic.

10. One unit of art or art history is required.

11. One unit of economics is required.

12. A social science concentration is required:

- Students must take 3 units in any one of the following departments: anthropology, economics, history, political science, psychology, or sociology. If the student selects economics, history, or political science, the 3 units taken to fulfill the social science concentration must be in addition to those required of all Medill students (see 7, 8, and 11). At least 1 of the 3 units must be at the 300 level. Students may apply no more than 1 100-level course toward the social science concentration. INTL ST 201-1,2,3 Introduction to the World System may be used toward the 3-unit social science concentration in political science.
- Students may not apply more than 1 unit of fieldstudy credit toward the 3-unit social science concentration. Requests for field-study credit must be approved by the director of undergraduate studies.

13. Students are required to complete a 6-unit concentration in any department of the Judd A. and Marjorie Weinberg College of Arts and Sciences other than the area selected for the 3-unit social science concentration. For any 6-unit concentration except in astronomy, biological sciences, chemistry, geological sciences, mathematics, physics, or a foreign language, students may apply no more than 1 100-level course and must take at least 2 300-level courses.

- Students are exempt from this requirement if they complete a minor in Weinberg College, complete a second major in any department of Weinberg College, or complete an adjunct major offered through Weinberg College. Permission to pursue a second or adjunct major must be secured from the appropriate Weinberg College department chair.
- Students may apply not more than 2 units of fieldstudy credit toward the 6-unit concentration.
   Requests for field-study credit must be approved by the director of undergraduate studies.

14. First-year students are encouraged to take COMM ST 272 Communication and American Democracy, normally offered once a year and cotaught by journalism faculty. This course counts as a nonjournalism elective.

15. No course may count toward more than one requirement.

16. Exceptions to any degree requirements must be approved by the Medill Academic Standards Committee. Petitions and the committee's rules for filing petitions are available in the Medill Office of Student Records and Services or from the chair of the committee. 17. In addition to and independent of the requirements set by Medill, all students must satisfy the Undergraduate Residence Requirement (see the Undergraduate Education section of this catalog). Also, see the *Medill Undergraduate Handbook* for a complete list of courses that fulfill the nonjournalism course requirements.

#### **Grade Requirements**

1. Students must achieve a 2.00 minimum grade point average in all nonjournalism courses taken for a letter grade and a 2.25 minimum grade point average in journalism courses. In addition, all journalism students are subject to the following grade requirements:

- The journalism grade point average will reflect the grades of all journalism courses attempted (including F's).
- All Y and X grades, unless made up satisfactorily by the end of the subsequent quarter, will be counted as F's.
- A grade of F and/or N earned twice in the same required course will be grounds for mandatory transfer out of Medill.
- To be eligible for the junior-year Teaching Media program, students must earn a grade of C or better in Newswriting and Reporting and in the two media-specific courses that immediately precede the Teaching Media program and a minimum 2.25 grade point average in those three courses plus Editing and Writing the News.
- A maximum of two units of D or below in journalism courses or three units of D or below overall will be permitted. Exceeding these limits will be grounds for mandatory transfer out of Medill.
- When journalism courses are repeated, both the previous grade and the subsequent grade are computed in the journalism grade point average. One course does not substitute for the other.
- Students who do not meet the minimum grade point requirements are placed on academic probation. Continued poor performance will result in a mandatory transfer to another school within Northwestern University or dismissal from the University.

2. Medill undergraduates are required to take these courses for letter grades (A, A–, B+, B, B–, C+, C, C–, D, F):

- All journalism courses (except those offered by the faculty under the P/N option)
- All courses in the social science concentration

 All basic requirements in art/art history, economics, history, literature, mathematics/science/logic, philosophy/religion, and political science

3. Other courses may be taken on the pass/no credit (P/N) option, if that option is available. A total of no more than 6 units of credit may be taken P/N and counted toward the 45 units required for graduation. (P/N grades from Teaching Newspaper, Teaching Magazine, or Teaching Television are included in these 6.) Only 1 course per quarter may be taken P/N.

#### **Medill Honor Pledge**

As of September 2002, all students taking classes in the Medill School of Journalism, regardless of their school of enrollment, will be required to sign the Medill Honor Pledge concerning falsification and plagiarism, among other things.

#### **Faculty Advisers**

When students enter Medill, they are assigned to a faculty adviser who is available to help develop an individual academic program. Medill staff and student peer advisers also help advise students in such areas as degree requirements, career paths, noncredit internships (especially during the summers), and work in campus media.

#### **Academic Options**

#### Internships

Internship employment by newspapers, magazines, radio and television stations, online media, and advertising and public relations agencies may be available to Medill students, particularly during the summer. Many employers look to Medill for talented young people who can be introduced to their organizations through internships. The school encourages these opportunities as a means of enriching students' education but gives academic credit only for the Teaching Newspaper, Teaching Magazine, and Teaching Television programs.

#### **Other Undergraduate Programs**

Students in the Medill School of Journalism also may enroll in courses offered by the Center for the Writing Arts, the interschool Undergraduate Leadership Program, and the international studies adjunct major, among other areas (see the Other Undergraduate Programs section of this catalog).

#### Activities

Through student publications and broadcast media, professional organizations, and convocations, Medill students have many journalistically related opportunities outside of the classroom.

Students write and edit the independent student newspaper the *Daily Northwestern*, published during the academic year, and the *Summer Northwestern*, a weekly newspaper published during Summer Session. Also published on campus are *Syllabus*, the student yearbook, and a wide variety of other publications. The University gives no academic credit for work on student-run publications. The *Daily Northwestern*, *Summer Northwestern*, and *Syllabus* are published by Students Publishing Company and have no formal connection with the School of Journalism.

Radio station WNUR-FM provides another outlet for student newswriters, sportscasters, editors, and commentators, as does *Northwestern News Network*, a student-produced news program aired on a local cable television channel.

Writing skills are helpful in other extracurricular activities such as student government, the Waa-Mu Show, student-planned colloquia, and various literary publications.

The Society of Professional Journalists and the National Association of Black Journalists, professional organizations that promote high standards among journalists, have chapters on campus. Other organizations for students interested in journalism include Blackboard and the Communications Residential College. Top scholars in the senior and graduate classes are initiated into Kappa Tau Alpha, the national journalism honorary society.

#### **ROTC Course Credits**

ROTC course credits may be used as a portion of the 45 units required for graduation. These units are considered elective courses.

#### Accelerated Master's Program

Through the Accelerated Master's Program, the Medill School of Journalism allows a few students each year to earn both the bachelor's and master's degrees in editorial journalism in less than five years. Students apply to this program in their junior year; those accepted into the highly selective program must show academic excellence, the promise of success in journalism, and a demonstrated high level of professional commitment and personal maturity.

#### Early Graduation

Students who plan to graduate early must notify the school in writing at least three quarters before the expected date of graduation. These students also should check with the Registrar's Office to make sure they have fulfilled the Undergraduate Residence Requirement.

#### Courses

#### **Required Courses**

Note: Students select either 340, 341, 345, and 346; 350, 351, 355, and 356; or 360, 361, 365, and 366.

**EDIT 201-0 Editing and Writing the News** The fundamentals of journalistic editing, writing, research, and visual presentation.

**EDIT 202-0 History and Issues of Journalism** The history of print and broadcast journalism, primarily in the United States, as well as the historical development of several contemporary media and ethical issues.

**EDIT 301-0 Newswriting and Reporting** Reporting and writing several types of news stories for print and broadcast media under deadline pressure; exploring the use of graphics. Prerequisites: 201 and sophomore standing.

**EDIT 340-0 Newspaper Editing and Writing** Fundamentals of newspaper editing, including headlines, page layout and design, photo editing, information graphics, and appropriate electronic tools. Prerequisite: 301.

**EDIT 341-0 News and New Media** An exploration of the move of traditional publications into electronic publishing, the journalist's role in that process, and the appropriate electronic tools. Prerequisite: 340, 355, or 365, or concurrent registration in 340.

**EDIT 345-0 Teaching Newspaper: Reporting** (1 or 2 units) Honing reporting and newswriting skills in a newsroom through practical assignments under deadline pressure and close editorial supervision. Prerequisites: 340 and 341. Taken with 346.

**EDIT 346-0 Teaching Newspaper: Editing** (1 or 2 units) Honing skills in news editing, headline writing, page layout/design, and graphics in a newsroom through practical assignments under deadline pressure and close editorial supervision. Prerequisites: 340 and 341. Taken with 345.

**EDIT 350-0 Magazine Writing** Reporting, writing, and illustrating magazine articles, with emphasis on voice, style, subject matter, and organization; the development of ideas; the marketing of articles. Prerequisite: 301.

**EDIT 351-0 Magazine Editing** Editing magazine copy and graphics, with emphasis on precision, style, and structure; an overview of the magazine industry and the role of magazines in society. Prerequisite: 301.

**EDIT 355-0 Teaching Magazine: Writing** (2 units) An exploration of aspects of magazine writing and reporting.

Practical assignments in a magazine office with deadline pressure and close professional supervision. Prerequisites: 350 and 351. Taken with 356.

**EDIT 356-0 Teaching Magazine: Editing** An exploration of aspects of magazine editing, graphics, and publishing. Practical assignments in a magazine office with deadline pressure and close professional supervision. Prerequisites: 350 and 351. Taken with 355.

**EDIT 360-0 Broadcast Writing** Writing news scripts for television on an appropriate computer system, editing videotape, and writing stories to coordinate with the video. Prerequisite: 301.

**EDIT 361-0 Television News Editing** Writing and producing a television news program using the appropriate computer and editing equipment, news wires, and video feeds. Emphasis on the editorial decision-making process. Prerequisite: 360.

**EDIT 365-0 Teaching Television: Broadcast News** (2 units) Gathering television news from the field; writing scripts, readers, voiceovers, vosots, packages, and on-camera news for reporters and anchors. Taken in a television newsroom under close professional supervision. Prerequisite: 361. Taken with 366.

**EDIT 366-0 Teaching Television: Editing** Gaining exposure to the television assignment process by working with the assignment desk; editing voiceovers, sound bites, and packages. Taken in a television newsroom under close professional supervision. Prerequisite: 361. Taken with 365.

**EDIT 370-0 Law and Ethics of Journalism** The legal and ethical framework defining media freedoms and constraints in the United States. Historical context and focus on the evolution of constitutional, statutory, judicial, and ethical standards. Prerequisite: senior standing.

#### **Elective Courses**

Two courses are required from this list. Students may take both 303 and 304 only if one is an optional 12th journalism unit. Students may take 340, 341, 350, 351, 360, or 361 as electives if they have not taken them as required courses.

**IMC 303-0 Advertising** Orientation to advertising in the economy and society. Introduction to theory and practice of marketing, research, copywriting, media planning, direct marketing; how advertising works; advertising agencies and other organizations; role of advertising in the society and economy; legal aspects.

**IMC 304-0 Direct Marketing** Fundamental principles of direct marketing, including marketing, promotion, and business considerations; survey of database, media, and creative techniques used by traditional and nontraditional marketers.

**EDIT 367-0 Broadcast Reporting** Basics of reporting for broadcast and preparation of broadcast stories.

Emphasis on interviewing, packaging a story, and analyzing techniques. Prerequisites: senior standing and 360.

**EDIT 368-0 Television News Documentary** Formats used in documentary production, with emphasis on transforming a major research effort into a half-hour program or a multipart series. Prerequisites: senior standing and 366 or 367.

**EDIT 373-0 Investigative Journalism** The news media in their adversarial role in public affairs reporting, including investigative and interpretative reporting and advocacy journalism; the impact of the news media on public opinion and policy making. Prerequisite: senior standing.

**EDIT 374-0 Analytical Reporting** Development of an in-depth reporting/writing project, including researching the subject; analyzing the appropriate interviews, computer data, and/or surveys; writing and editing; and preparing information graphics. Prerequisite: senior standing.

**EDIT 375-0 Literary Journalism** A survey of the work of several print and broadcast journalists to explore the intersection of journalism and literature; analysis of the relationships between form and content within the historical contexts in which pieces were produced. Prerequisite: senior standing.

**EDIT 376-0 Print Media Design** The fundamental tools of layout, typographic contrast, and color theory, with a focus on current approaches to newspaper, magazine, and newsletter design. Prerequisite: 340 or 351.

**EDIT 377-0 Reporting across Race and Culture** Issues of race, ethnicity, and culture in their journalistic applications; practices that have contributed to inaccurate coverage of racial issues and groups; strategies for making coverage accurate, relevant, and fair. Prerequisite: junior standing.

**EDIT 388-0 Internship** (0 units) Student-initiated internships in journalism. Supervised by Medill faculty. Prerequisites: sophomore standing and consent of instructor.

**EDIT 390-0 Special Topics** Specialized, experimental courses offered from time to time by faculty. Prerequisites: vary depending on the course.

**EDIT 399-0 Independent Study** Academic work sponsored and supervised by a faculty member working one-on-one with a student. Prerequisite: consent of Medill Academic Standards Committee.

# **School of Music**

Since its establishment in 1895, the Northwestern University School of Music has ranked among the most prestigious music schools in the nation, providing an environment in which young musicians can dedicate themselves to their art. The school offers students a variety of musical experiences, enabling them to develop into highly proficient performers and scholars. It is a professional school within the University - students accepted into the school are also accepted into the University and consequently have the advantage of academic study in a variety of courses with distinguished faculty. As part of a private institution, the School of Music has developed distinctive programs to meet the artistic and professional needs of its students, preparing them for careers as instrumentalists, singers, teachers, composers, conductors, theorists, historians, critics, managers, and others requiring a specialized knowledge of music. These programs are responsive to new directions, recognizing that a great institution of musical learning preserves the riches of past practices while it encourages its students to explore the practices that will produce the music of the future.

The faculty believe that each undergraduate should be given a comprehensive musical background, that the education should be centered on performance founded on scholarly studies in music theory and history, and that all musical training should be accompanied by a broad cultural background in the humanities. In addition to providing instruction in voice and all principal instruments, composition, and music technology, the school supports orchestras, bands, choral ensembles, opera, and a wide variety of small ensembles that give students experience in all avenues of musical expression.

The graduate division of the School of Music is open to students who are deemed capable of advanced study. Graduate courses emphasize scholarly performance and include concentrated work and research in students' major fields of interest. The ultimate aim is to develop informed musicians, independent scholars, and inspired teachers. Although the excellence of any school depends mainly on the quality of its faculty and students and the soundness of its curriculum, distinguished musicians are brought to the campus from time to time to enrich the regular programs and to give a special impetus to study. In recent years, guests have included Daniel Barenboim, Pierre Boulez, Grace Bumbry, Renée Fleming, James Galway, Witold Lutoslowski, Wynton Marsalis, Bobby McFerrin, and Sherrill Milnes. A performing arts series annually presents concert artists in performance and master classes for students.

In addition to outstanding instruction and significant platform experience at the University, the school offers students excellent opportunities for participating in metropolitan Chicago's rich musical life. While working toward a degree, students can gain valuable performing experience and enhance their education as developing musicians.

For more information, see the school's Web site at www.northwestern.edu/musicschool/.

#### **Mission Statement**

We affirm that music is a universally treasured art and an essential component of culture.

The mission of the School of Music is to provide the highest order of education in all major aspects of music. We endeavor also to expand the musical experiences and understandings of students throughout the University and to enhance the quality of our community's musical life. While continuing to animate the vital traditions of music's past, we encourage creative and dynamic visions of its future.

The School of Music pursues this mission through professional undergraduate and graduate programs for a selective student body of highly qualified musicians who also meet competitive academic standards. We attempt to integrate the artistic and intellectual aspects of our students' education and to provide a depth and breadth of musical study that equips them with a continuing capacity to grow in their musicianship and to adapt to changing professional demands. Our faculty members strive to be inspiring teachers as well as musical and intellectual leaders. They are actively engaged in expanding knowledge about music through their research and scholarship; in preparing students to be performers, composers, teachers, scholars, and informed audiences; and in enriching their community's culture through their own artistry.

#### **Academic Policies**

#### **Programs of Study**

The School of Music offers programs leading to the professional degrees of bachelor of music, master of music, graduate certificate in music, and doctor of music. While these programs are designed to prepare the individual for a professional life in music, the setting of the school within a university of Northwestern's quality provides special benefits to students for broadening their education in related disciplines. The school also offers a nonprofessional degree, the bachelor of arts in music. The School of Music is a founding member of the National Association of Schools of Music, which fully accredits all its degree programs.

The curriculum allows flexibility for students while providing an education that is basic for all musicians. Applicants in all areas who are accepted by the School of Music enter directly into a program of specialization that begins in the freshman year. The core studies, taken by all students, require the acquisition of minimum competencies and provide fundamental and essential experiences that complement the specialized studies in the declared major. Students are also required to complete studies in a number of allied subjects throughout the University and are given significant opportunities to explore other interests with free electives.

#### **Bachelor** of Music

Courses of study leading to the bachelor of music degree include music cognition, music composition, music education, musicology, music technology, music theory, and performance in jazz studies, piano, organ, string instruments, voice, winds, and percussion.

Through the use of electives, it is possible in the final two years of study leading to the bachelor's degree, with the adviser's help and the faculty's approval, to design an ad hoc program that cuts across specializations to meet a particular student's needs and career ambitions. Students interested in a specially designed and approved program that most fits their interests and abilities may petition for such a program. The program is designed in consultation with faculty and area professionals with expertise in the particular area of interest. Ad hoc specializations have included arts administration, music criticism, ethnomusicology, music theater production, and music business.

Graduates of the bachelor of music with specialization in the music education program meet all requirements for teacher certification in the state of Illinois (and most other states). In addition to the core program common to all School of Music students, music education majors take a structured sequence of courses in general education, a basic set of courses in music education, and special courses in the chosen music education specialization.

#### **Bachelor of Arts in Music**

In addition to the professional curricula just described, the School of Music offers a nonprofessional degree program leading to the bachelor of arts in music. Featuring an opportunity for substantially wider explorations in the liberal arts and fewer music requirements, the bachelor of arts in music is intended for students who have strong ability in music but are not necessarily interested in a musical vocation. Students who are interested in this program may petition for it at any time after they have been admitted to the School of Music.

#### Five-Year BA/BMus

Students accepted into the combined Weinberg College of Arts and Sciences–School of Music program may simultaneously earn a BA degree from Weinberg College and a BMus degree from the School of Music. They must complete all Weinberg degree requirements, including at least 30 Weinberg courses, as well as all School of Music bachelor of music degree requirements, including at least 30 music courses. Fulfilling both music and Weinberg requirements usually takes five years of full-time study, and the Undergraduate Residence Requirement of 15 quarters is obligatory (see Undergraduate Education).

Participants in this combined program must be accepted by both the School of Music and Weinberg College of Arts and Sciences. Interested students should consult with the associate dean for undergraduate studies in Weinberg College and the director of admissions in the School of Music.

Bachelor of Arts in Music (49 course units required)								
Music	Nonmusic							
<b>Core Studies</b> (12–16 units)	General Education Distribution (14 units)

BMus: Core Studies (15 units)	BAMus: See Music requirements under Bachelor of Arts							
Musicology (3 units)	in Music above.							
Music theory (3 units)	Engineering and Applied Science (36 units)							
Aural skills (3 units)	General education (BMus: 5 units; BAMus: 17 units)							
Keyboard skills (1.5 units)	Mathematics (6 units)							
Basic conducting (1 unit)	Basic sciences (5 units)							
Applied study (3 units)	Basic engineering (6 units)							
Ensembles (1.5 units)	Computer programming (1 unit)							
BMus: Major Studies (15–19.5 units)	Department program (16 units)							
Major Studies Requirement: See specific department and								
program. Majors in one of the following areas: principal								
instrument, voice, jazz studies, music cognition, music com-								
position, music education, musicology, music theory, music								
technology, academic studies, or an ad hoc major.								

#### Five-Year BS/BMus or BS/BAMus

Students accepted into the combined McCormick School of Engineering and Applied Science–School of Music program may simultaneously earn a BS degree from the McCormick School and a BMus or BAMus degree from the School of Music. They must complete all McCormick School degree requirements, including at least 36 McCormick courses, as well as all School of Music bachelor of music or bachelor of arts in music degree requirements, including at least 30 music courses. Fulfilling both music and engineering requirements usually takes five years of full-time study, and the Undergraduate Residence Requirement of 15 quarters is obligatory (see Undergraduate Education).

Participants in this combined program must be accepted by both the School of Music and the McCormick School. Interested students should consult with the Undergraduate Engineering Office in the McCormick School and the director of admissions in the School of Music.

#### **Degree Requirements**

Candidates for the degree of bachelor of music must complete the minimum number of courses required for their major. Depending on the major, this may be as many as 52.5 units, but the degree can usually be completed within four years.

All freshmen in the School of Music must participate in band, choir, or orchestra, as appropriate to their principal auditioned instrument. It is recommended that freshmen not participate in more than two ensembles per quarter. All students in the Department of Music Performance Studies must enroll in MUSIC 389 Convocation for at least four quarters. For specific requirements, see the Degree Requirements chart and the professional studies requirements of each program.

For their last 24 units, all students must be registered at Northwestern; for their last 12 units, they must be registered in the School of Music. Credit toward graduation is generally not granted for summer work taken at other colleges or universities as part of the last 24 units.

The work offered to meet the requirements for a degree may not average lower than C. Not more than one-fifth of this work may be of grade D. A maximum of six quarter-courses in nonmusic subjects taken under the P/N grade option may be counted toward the degree. Music students may *not* take music courses under the P/N grade option, except for those courses graded solely with P/N grades.

If students interrupt their program of study for an extended period of time and degree requirements are changed during this period, they will normally be held to the new requirements.

Every candidate for a degree must file an application for the degree a year in advance of the date of graduation.

Students coming to Northwestern University for a second undergraduate degree must transfer at least 9 units of credit in music, audition for admission at the 300 level, complete the general education distribution requirement with transfer credit, and comply with the 24-unit residency requirement.

In addition to and independent of the requirements set by the School of Music, all students must satisfy the Undergraduate Residence Requirement (see Undergraduate Education).

#### **Music Performance Study**

The School of Music offers instruction in piano, organ, string instruments, winds, percussion, and voice. Students should consult their adviser or program coordinator for the assignment of an instructor. Consent of the instructor and department chair as well as concurrent registration in ensemble are required.

Elective performance study assignments are made by the appropriate department chair as space is available.

#### **Faculty Advisers**

Each student is assigned to a faculty adviser. It is highly recommended that each student confer with the adviser at least once each quarter. Students may not make a change of registration beyond the adddrop dates without the approval of the assistant dean for undergraduate studies.

#### **Attendance Policy**

Students are expected to attend all sessions of courses and ensembles for which they are registered. It is the responsibility of students enrolled in the School of Music to acquaint themselves and comply with the attendance policy of their departments, class instructors, and ensemble conductors.

In addition, students who are absent from classes for three or more consecutive days because of illness are required to notify the Office of the Assistant Dean. Students who know they will be absent from classes or performing organizations for three or more consecutive days for such professional or personal commitments as auditions or off-campus performances or for any other nonemergency reasons are required to prepare a petition requesting permission to be absent from their academic and performance responsibilities in the School of Music. This petition must be submitted to the Office of the Assistant Dean for approval.

Failure to comply with these regulations can be cause for failure in the courses or ensembles for which a student is registered during that quarter.

# **Academic Options**

#### **Double Major**

Students may earn a double major in four years with proper academic planning and by fulfilling the requirements of both majors.

Bachelor of music candidates may double major only within the School of Music. In certain cases the curriculum may require enrolling in more than four courses per quarter. Typically, the double major combines a specialization in a performance area with one in the academic area or composition, although double majors within the academic area are possible also. A double major in two performance areas is generally not permitted.

Bachelor of arts in music candidates may double major with any major offered in the Weinberg College of Arts and Sciences but may earn only one bachelor of arts degree.

#### Interdisciplinary Certificates

School of Music students may elect to complete one of the interdisciplinary certificates developed by the School of Music faculty and representing disciplines often used in the music profession. These certificates cross the normally established disciplines to enable students to combine the study of music with another area in an interdisciplinary fashion. Each includes a minimum of six and a maximum of nine courses. Students applying for School of Music interdisciplinary certificates must present records showing a minimum of five courses not double-counted in their specializations.

Students who complete all required courses and notify the Office of Undergraduate Studies that they have done so will receive a notation on their Northwestern transcripts. Applications to receive the certificate are available from the Office of Undergraduate Studies and should be completed along with the Application for a Bachelor's Degree.

#### **Commercial Music**

The Certificate in Commercial Music requires nine courses:

- CONDUCT 326 Basic Conducting
- JAZZ ST 330 Writing for Jazz Ensembles
- MUSIC 398 Internship
- R/TV/F 383 Radio/Audio Production
- Two courses chosen from
- CONDUCT 320 Band Arranging CONDUCT 321 Writing for Choral Ensembles JAZZ ST 331 Advanced Jazz Writing MUS COMP 314-2 Orchestration MUS COMP 314-3 Advanced Orchestration
- Two courses chosen from music technology
- One elective in a related area

#### Jazz Studies

The Certificate in Jazz Studies requires six courses:

 One improvisation course chosen from JAZZ ST 162 Applied Jazz Improvisation JAZZ ST 262 Applied Jazz Improvisation MUSICOL 337 Improvisation and World Musicianship

- One jazz writing course chosen from JAZZ ST 330 Writing for Jazz Ensembles JAZZ ST 331 Advanced Jazz Writing
- One jazz history, theory, or literature course chosen from

AF AM ST 240 Survey of African American Music (spring quarter)

MUSICOL 334 Jazz: Its Roots and Elements

- Three electives chosen from improvisation; jazz writing; jazz history, theory, or literature; or jazz piano for the non-keyboard player courses
- Jazz performance (no credit)
- Large ensemble (University Jazz Ensemble, University Jazz Lab Band) and chamber ensemble (Chamber Jazz Ensemble) for six quarters

#### **Music Business**

The Certificate in Music Business requires eight courses:

- ADVERT 203 Basic Advertising (School of Continuing Studies)
- ECON 260 Accounting and Business Finance (prerequisites: ECON 201, 202)
- MKTG 201 Marketing I: Principles of Marketing (School of Continuing Studies)
- MUSIC 335 Selected Topics: Arts Administration or comparable course
- ORG BEH 309 Human Resource Management (School of Continuing Studies)
- ORG BEH 367 Strategic Planning and Management (School of Continuing Studies)
- Business-related elective
- MUSIC 398 Internship

#### Music Criticism

The Certificate in Music Criticism requires nine courses:

• MUSICOL 324 History and Practice of Criticism

• MUSICOL 399 Independent Study (see the assistant dean for undergraduate studies)

- Three musicology electives
- EDIT 201 Editing and Writing the News
- EDIT 301 Newswriting and Reporting (prerequisite: 201)
- EDIT 340 Newspaper Editing and Writing (prerequisite: 301) or 370 Law and Ethics of Journalism
- EDIT 341 News and New Media (prerequisite: 340, 355, or 365) or 350 Magazine Writing (prerequisite: 301)

#### **Interschool Programs**

For information about the interschool programs listed below, see the Other Undergraduate Programs section of this catalog.

#### Art and Technology Program

School of Music undergraduates may earn a minor in art and technology.

#### Integrated Arts Program

The interschool Integrated Arts Program offers courses leading to a minor that explore the creative process from the perspective of the artist in the disciplines of theater, visual arts, music, dance, and media arts.

#### International Studies Program

International studies, an undergraduate interschool adjunct major that is taken in conjunction with a traditional major, is open to students in the School of Music.

#### Music Theatre Program

The Certificate in Music Theatre provides the opportunity for School of Music students majoring in voice and School of Speech students majoring in theater to create a second area of specialization.

#### Undergraduate Leadership Program

The Undergraduate Leadership Program, an interschool certificate program open to all undergraduates, helps students understand the nature of leadership and prepares them to become leaders.

#### **Graduate Studies**

The Graduate Division of the School of Music offers programs of study leading to the master of music degree, the graduate certificate in performance, and the doctor of music degree. Information concerning these programs is available from the Office of the Associate Dean for Academic Affairs, School of Music. For information about the requirements for the doctor of philosophy degree in music, write to the Graduate School.

#### Resources

#### **Musical Organizations**

Music majors are required to participate in those musical organizations for which they are qualified as a part of their program of study. Students from all other schools of the University are encouraged to participate in any organizations for which they qualify.

#### Symphony Orchestra

This large ensemble provides experience in the concert presentation of representative symphonic repertoire as well as operas and concertos.

#### Chamber Orchestra

The Chamber Orchestra performs works of all periods. Repertoire is limited to the music of chamber and small symphony orchestras.

#### Philharmonia

This orchestra is open upon audition to interested and qualified students from any school in the University and performs a wide-ranging repertoire.

# Symphonic Wind Ensemble

Flexibility and thorough musicianship mark the programs of the Symphonic Wind Ensemble. This is the smallest and most select of the University wind ensembles. Its objectives are to perform literature of the highest aesthetic value with emphasis on major original works for band and to attain perfection in balanced performance through rigid requirements for individual musicianship and advanced playing technique.

#### Symphonic Band

Made up of 85 outstanding wind and percussion performers, the Symphonic Band seeks to perform the finest works available for large band or wind orchestra at the highest possible level.

#### **Concert Band**

The 90-member Concert Band provides an excellent performing experience for interested and qualified students from any school in the University. The Concert Band performs fine literature, including both original and transcribed works.

#### Wildcat Marching Band

The Wildcat Marching Band is a 150-piece all-University organization that combines marching precision and exceptional playing ability in a finely polished and spirited unit. The band performs for all football games at home and one or more out-of-town games each season.

#### University Brass Ensemble

The University Brass Ensemble provides performance challenges and learning opportunities for serious brass players interested in literature for ensembles of various sizes and compositional styles.

#### Jazz Groups

The Jazz Ensemble, Jazz Band, Jazz Lab, and a variety of small combo groups enable students to gain experience in the jazz idiom and to improve improvisation skills. They also offer student composers and arrangers the chance to write for various jazz instrumental combinations.

#### Percussion and Mallet Ensembles

The Percussion and Mallet Ensembles offer students an opportunity to perform percussion chamber works representative of diverse musical styles from Renaissance transcriptions through avant-garde theater pieces. The ensembles maintain active performance schedules both on and off campus and are open to all percussion students.

#### **Contemporary Music Ensemble**

The Contemporary Music Ensemble provides experience for student performers and composers in the performance of contemporary unpublished works. The ensemble annually presents a concert featuring a complete program of student compositions.

#### University Chorale

The University Chorale is a 40-voice ensemble that is the most select of the University choruses. Its personnel are chosen on the basis of their musicianship and their interest in the performance of both a cappella and accompanied literature.

#### University Singers

The University Singers is a larger choral ensemble of 60 to 80 singers with high performance standards. This ensemble frequently combines with other choral organizations in the performance of important choralorchestral works.

#### University Chorus

The University Chorus is made up of singers from the School of Music, other qualified students, University faculty and staff, and interested residents of the community. It is organized for the purpose of performing large-scale choral works.

#### Chapel Choir

School of Music students participate in the Chapel Choir at the weekly worship services held in the Alice Millar Chapel. This choir also presents at least three evening concerts during the year.

#### Early Music Ensemble

The Early Music Ensemble provides study and performance of music written before 1800. Workshops are conducted in early instruments, including recorders, crumhorns, sackbuts, viols, and continuo, and in vocal genres. Any student may request an interview/ audition for this ensemble. At least one performance is given each quarter.

#### **Chamber Music Ensembles**

Chamber ensembles include piano trio; string trio, quartet, quintet, sextet, and octet; harp ensemble; brass quintet, choir, and band; woodwind quintet; trombone quartet and ensemble; and tuba, saxophone, mixed winds, trumpet, horn, and flute ensembles.

#### Facilities

The School of Music occupies five buildings. The Music Administration Building houses administrative offices, classrooms, studios, and practice rooms. The faculties of the Department of Academic Studies and Composition, Voice and Opera Program, and Piano, Organ, and Church Music Program have offices in this building. Regenstein Hall houses rehearsal facilities, practice rooms, a 200-seat lecture/recital room, and the library and offices for the University bands. The Department of Music Performance Studies office and studios for faculty of the Conducting and Ensembles, String Instruments, and Wind and Percussion Instruments Programs also are located in Regenstein Hall. Practice Hall contains 35 practice rooms. Lutkin Hall, seating 400, is used for student and faculty recitals and lecture classes. Pick-Staiger Concert Hall provides a 1,000-seat concert hall, rehearsal facilities, and offices and library for the University Symphony Orchestra. The School of Music maintains two computer labs and an electronic music studio.

#### Music Library

The Music Library, internationally recognized for its collection of contemporary music, is one of the country's finest academic music libraries. It has spacious, aesthetically pleasing facilities, including a multidimensional listening center. Holdings include

193

240,000 books, scores, journals, manuscripts, and sound recordings. The library's special collections include a manuscript collection documenting contemporary notation compiled by John Cage for his book *Notations*; additional holograph scores, sketches, and musicians' letters; the Fritz Reiner Library; rare printed resources; and a portion of the Moldenhauer Archive. The Music Library is also a leader in library automation.

#### Eckstein Bequest

The School of Music is the beneficiary of an endowment from the estate of Mrs. Louis Eckstein, the Chicago arts patron whose husband founded the Ravinia Music Festival. The Eckstein bequest is used to support all facets of the School of Music, particularly its financial aid and scholarship programs. The Eckstein Endowment has provided the financial resources to support the school's pursuit of excellence.

In recognition of the Eckstein bequest, the school has established the Eckstein Scholars Program for outstanding entering freshmen.

#### **Collection of Artist Instruments**

The Northwestern University special collection of string instruments provides an exposure to a concept of sound available only through instruments with special resources of beauty and sonority. It has been formed over a period of years through the generosity of many friends. Seniors and graduate students may use these instruments when they appear as recitalists or soloists with University orchestras.

#### Pi Kappa Lambda

Pi Kappa Lambda, national music honor society, was founded at Northwestern University in 1918 for the recognition and encouragement of the highest level of musical achievement and academic scholarship among music majors not eligible for Phi Beta Kappa. Alpha chapter elected as its first member Peter Christian Lutkin, the first dean of the School of Music, and his initials in their Greek equivalents were adopted for the name of the society. The national office has been housed in the Northwestern University School of Music since 1984. Two deans and one faculty member from Northwestern have served as national president, and the society has grown to 176 chapters in colleges, conservatories, and university schools of music.

Students applying for membership in Pi Kappa Lambda must solicit the written recommendations of two faculty members. These recommendations should be submitted to the assistant dean for undergraduate studies.

#### **Music Studies for Nonmajors**

Students registered in other schools of the University are encouraged to continue their development as instrumentalists or vocalists through ensemble participation, class instruction, or private study. Ensembles and music performance instruction require an audition. Information about auditions is available in the *Class Schedule* and in the School of Music Office of Undergraduate Music Studies. For additional information about instruction, inquire in person at the Office of Undergraduate Music Studies.

#### **University Ensembles**

Students from all schools of the University are encouraged to audition for the following ensembles: Philharmonia, Concert Band, Wildcat Marching Band, University Chorus, and Early Music Ensemble. Nonmusic majors may occasionally be placed in other ensembles based on their audition.

#### **Class Instruction**

A limited number of students in any Northwestern school may take class instruction in beginning piano without credit.

#### **Private Lessons for Credit**

Nonmusic majors may take half-hour private music lessons once a week for .5 course credit in GEN MUS 115 Applied Piano/Organ, 120 Applied Strings, 125 Applied Winds/ Percussion, and 130 Applied Voice. Students are accepted for private lessons based on an audition and the availability of an instructor; a \$125 registration fee is billed to the student's tuition and fees account.

#### **Courses Open to Undergraduates**

The following courses were designed to meet the needs of any students interested in studying music. Students with a basic music foundation are encouraged to register for Harmony, followed by Form and Analysis and/or Composition. The music literature sequence is designed to permit students with limited background to start with 170. Students may then enroll in certain 300-level musicology and music theory courses when space is available.

**GEN MUS 115-0 Applied Piano/Organ** (.5) Half-hour private lessons for nonmajors; audition required.

**GEN MUS 120-0 Applied Strings** (.5) Half-hour private lessons for nonmajors; audition required.

**GEN MUS 125-0 Applied Winds/Percussion** (.5) Half-hour private lessons for nonmajors; audition required.

**GEN MUS 130-0 Applied Voice** (.5) Half-hour private lessons for nonmajors; audition required.

**GEN MUS 131-0 Nonmajor Vocal Performance Seminar** (.5) Must be concurrently registered for 130, section 21 or 22.

**GEN MUS 170-0 Introduction to Music** Principles of musical organization. Score study and recognition of what is heard in all music, including classic, jazz, rock, and popular. (VI. Literature and fine arts)

**GEN MUS 175-0 Selected Topics** Topics vary; announced before registration. May be repeated.

**INTG ARTS 190-0 Art Process** See Integrated Arts Program in Other Undergraduate Programs. (VI. Literature and fine arts)

**GEN MUS 220-0 History of the Symphony** Study of music for the symphony orchestra from the 17th century to the modern period. (VI. Literature and fine arts)

**GEN MUS 230-0 Masterpieces of Opera** History of opera from its origins in Italy at the end of the 16th century to the modern period. (VI. Literature and fine arts)

**GEN MUS 241-0 Beginning Guitar** Group lessons in guitar techniques for beginners.

**GEN MUS 252-0 Harmony** Harmonic materials and tonal structures. Analysis of harmonic structures; harmonization of melodies. Prerequisite: 170 or consent of instructor. (II. Formal studies)

**GEN MUS 253-0 Form and Analysis** Nature of musical forms found in musical literature from the Renaissance to the present; analysis of musical examples. Prerequisite: 252 or music-reading skills and some understanding of harmony.

**GEN MUS 270-1 The Western Musical Tradition** Major genres and composers from 1600 to 1825. Primary emphasis on the generations of Bach and Handel, Haydn and Mozart, Beethoven and Schubert. Prerequisite: 170 or equivalent. (VI. Literature and fine arts)

**GEN MUS 270-2 The Western Musical Tradition** Major genres and composers from 1825 to the present. Pre-requisite: 170 or equivalent. (VI. Literature and fine arts)

**INTG ARTS 291-3 Modes of Music** See Integrated Arts Program in Other Undergraduate Programs. This course will not satisfy the distribution requirement for music majors. (VI. Literature and fine arts)

**GEN MUS 330-0 Black Sacred Music: History** Evolution of black sacred music from its roots; examination of earliest musical forms, styles, and techniques; influences of psalm singing, hymnody, work songs, Negro spirituals. Pre-requisite: consent of instructor.

GEN MUS 340-1,2,3 Performance Ensemble: Styles and Techniques of Black Sacred Music Evolution and development of performance practices within the black sacred music tradition. Anthemic Negro spirituals, hymns, improvisations, jubilees, praise songs, and traditional and contemporary gospel music performed publicly each quarter. Prerequisite: consent of instructor.

**INTG ARTS 390-1 Performance Seminar** See Integrated Arts Program in Other Undergraduate Programs. (VI. Literature and fine arts) **INTG ARTS 390-2 Toward a Theory of the Arts** See Integrated Arts Program in Other Undergraduate Programs. (VI. Literature and fine arts)

# Interdepartmental Courses for Majors

The music theory, musicology, aural skills, keyboard skills, and ensembles sequences are required for all undergraduates in the School of Music. Ensembles listed under Conducting and Ensembles are available by audition to all students in the University.

# Courses Open to Undergraduates

MUSIC 110-0 Introduction to Theory (.5)

**MUSIC 111-1,2,3 Music Theory I** (.5) Music as sound in time. Analytical studies in forms, media, textures, and harmonic and melodic materials. Prerequisite: preceding quarters of 111.

**MUSIC 126-1,2,3 Aural Skills I, II, III** (.5) Sight-singing and ear-training; drill in recognition of melodic, rhythmic, and harmonic patterns and aural analysis through listening and dictation. Progresses through six levels of proficiency.

**MUSIC 127-0 Keyboard Skills** (.5) Class instruction, in electronic piano classroom; six levels of proficiency. Separate sections for pianists and nonpianists.

**MUSIC 211-1,2,3 Music Theory II** (.5) Continuation of 111. Prerequisite: 111-1,2,3 or consent of instructor.

**MUSIC 212-1,2,3 Music History** (.5) Principles, materials, and concepts of the historical study of Western art traditions.

**MUSIC 213-0 Introduction to Music Cultures of the World** (.5) Introduction both to the world's musical variety and to common issues related to music production worldwide.

MUSIC 226-1,2,3 Aural Skills IV, V, VI (.5) Continuation of 126.

MUSIC 227-0 Keyboard Skills (.5) Continuation of 127.

**MUSIC 326-0 Advanced Aural Skills** (.5) Error detection, rhythmic skills, aural analysis of harmony and form, refinement of other listening skills. Based on Western art music.

**MUSIC 327-1 Advanced Keyboard Skills VII** (.5) Advanced score-reading. Reading various voice parts in combination and harmonically reducing four-part textures.

**MUSIC 327-2 Advanced Keyboard Skills VIII** (.5) Techniques of accompanying by reducing and rewriting accompaniments to make initial performances more effective.

**MUSIC 327-3 Advanced Keyboard Skills IX** (.5) Advanced accompanying. Adding accompaniments to a given vocal line. Improvising accompaniments in various styles, including "swing." Transposition of individual lines.

**MUSIC 335-0 Selected Topics in Music** Topics vary; announced before registration. May be repeated.

MUSIC 348-0 Recital Preparation (.5)

**MUSIC 350-0 Alexander Technique** (.5) Methods of using the body efficiently to reduce unnecessary tension and

stress in instrumental and vocal performance. Sections: 20, piano; 21, strings; 22 and 23, wind and percussion; 24 and 25, voice.

**MUSIC 389-0 Convocation** (0) Periodic performances by School of Music students, faculty, and guest artists. Required of undergraduate and master's students. **MUSIC 398-0 Internship** Field experience as an intern.

#### Academic Studies and Composition

This department consists of the Music Composition, Music Education, Musicology, Music Technology, and Music Theory and Cognition Programs.

Bachelor of music specializations are available in music cognition, music composition, music education, musicology, music technology, and music theory. These specializations are described on the following pages. An additional specialization option, involving general academic studies, requires one course from each of the five programs and seven 300-level courses selected from any of the Department of Academic Studies and Composition offerings. Most 300-level courses in this department require junior standing.

#### Music Composition Program

Composition students pursue a course of study that develops analytical and creative skills and enjoy many opportunities to hear their works performed. Students have access to the electronic and computer music studios, which provide the latest technology for experimentation and experience with 20th-century compositional materials. Students intending to major in composition may substitute composition for applied studies during their freshman and sophomore years.

#### **Major Studies Requirement**

For a major in composition, 19.5 course units are required: • 112, 212 Composition (6 units) (some credit may be

- given for applied instrument or voice lessons)
- 312 Composition (6 units)
- 314-1 Instrumentation (1 unit)
- 314-2 Orchestration (1 unit)
- 316 Baroque Counterpoint (1 unit)
- 317 Renaissance Counterpoint (1 unit)
- 322-1,2 Materials of Modern Music (1 unit)
- Music theory courses in analysis (2 units) (1 unit must be in 20th-century analysis)
- Keyboard skills (.5 unit)
- 390 Composition Colloquium (0 units)

#### **Courses Open to Undergraduates**

**MUS COMP 112-0, 212-0, 312-0 Composition** Original composition; individual instruction.

#### MUS COMP 278-0 Contemporary Music Ensemble

Performance of contemporary works: avant-garde music, new notation systems, electronic music.

**MUS COMP 311-1,2,3 Class Composition** Class instruction in techniques of composition. Open to nonmusic majors. **1.** Writing for solo instruments. **2.** Writing for two to four instruments. **3.** Writing for instruments and/or voices. Prerequisite: preceding quarters of 311 or consent of instructor.

**MUS COMP 314-1 Instrumentation** Instruments of the orchestra; scoring techniques; analysis of instrumental combinations. Prerequisite: MUSIC 211-3 or consent of instructor.

**MUS COMP 314-2 Orchestration** Stylistic scoring projects; analysis of orchestral and chamber scores. Prerequisite: 314-1 or consent of instructor.

**MUS COMP 314-3 Advanced Orchestration** Contemporary scoring techniques; creative projects; analysis of orchestral and chamber scores. Prerequisite: 314-2, graduate standing, or consent of instructor.

**MUS COMP 316-0 Baroque Counterpoint** Baroque dance suite, chorale prelude, invention, fugue, chiefly involving the music of J. S. Bach. Melodic, harmonic, structural characteristics; contrapuntal techniques.

**MUS COMP 317-0 Renaissance Counterpoint** Contrapuntal textures from two to four voices. Cadence and form, melodic line and motive, rhythm, simple and complex imitation, and treatment of dissonance in the sacred music of Lassus, Josquin, and Palestrina.

**MUS COMP 322-1,2 Materials of Modern Music** Writing projects; analysis of scores. **1.** 20th-century stylistic techniques. **2.** Performers and composers. Contemporary materials; original writing projects; in-class performances of original work. Prerequisite: preceding quarter of 322 or consent of instructor.

**MUS COMP 335-0 Selected Topics in Music Composition** Topics vary; announced before registration. May be repeated for credit.

**MUS COMP 340-0 Composing with Computers** Techniques for composing with computers through hands-on experience and analysis. Prerequisite: entry-level course or equivalent experience.

**MUS COMP 341-0 Advanced Computer Composition** Advanced instruction in computer composition. Composition of etudes and at least one larger work. Prerequisite: MUS TECH 338.

**MUS COMP 390-0 Composition Colloquium** (0) Discussion of contemporary compositional techniques.

MUS COMP 399-0 Independent Study (.5-1)

#### Music Education Program

Graduates with a major in music education meet all requirements for teacher certification in the state of Illinois as well as most other states. Students take the professional program required of all music students, a structured sequence of courses in general education, a basic set of courses in music education, and special courses in the chosen music education specialization. The combination results in a program that prepares professionals with a broad understanding of music and education as well as the skills to be effective music teachers.

Students in the undergraduate music education program must take all the core studies in music and all the professional studies in music education plus the general education courses required for teacher certification and four units of general electives. They must also choose one of the three specialization tracks — instrumental, choral, or general and take the required courses for that track. All music education majors are required to complete 100 hours of clinical observation.

#### Professional Studies in Music Education (22-28 units)

- Private lessons (6–9 units)
- Additional keyboard skills (as needed by track) (0–3 units)
- Additional large ensemble (eight quarters) (4 units)
- 258 Philosophy of Music Education
- MUS TECH 259 Introduction to Music Technology
- 260 The Music Teacher as Communicator
- MUS TECH 320 Physics of Sound
- CONDUCT 326 Basic Conducting
- 368 Teaching Composition in the Schools
- 369 Research and Evaluation in Music Education
- 380–387 Student Teaching (3 units)

# Instrumental Track (8 units)

- 230 Flute Class (.5 unit)
- 233 Clarinet and Saxophone Class (.5 unit)
- 234 Double Reed Class (.5 unit)
- 235 High Brass Class (.5 unit)
- 236 Low Brass Class (.5 unit)
- 237 String Class I (.5 unit)
- 238 String Class II (.5 unit)
- 239 Percussion Class (.5 unit)
- CONDUCT 340-1 Advanced Conducting
- 363 Teaching High School Nonperformance Courses
- 364 Teaching Instrumental Music I
- 365 Teaching Instrumental Music II

#### Choral Track (5.5 units)

- 232 Voice Class (.5 unit)
- CONDUCT 340-2 Advanced Conducting
- 362 Teaching General Music II
- 363 Teaching High School Nonperformance Courses
- 366 Teaching Choral Music I
- 367 Teaching Choral Music II

#### General Track (5 units)

- 231-1,2 Guitar Class I, II
- 232 Voice Class (.5 unit)
- 240 Recorder Class (.5 unit)
- 361 Teaching General Music I
- 362 Teaching General Music II
- 366 Teaching Choral Music I

#### General Education (7 units)

- ENGLISH 105 Expository Writing or 205 Intermediate Composition
- HISTORY 210 History of the United States (may not be taken P/N)
- POLI SCI 220 American Government and Politics (may not be taken P/N)
- PSYCH 110 Introduction to Psychology
- TEACH ED 390 Health and Physical Development
- SESP 201 Human Development: Childhood and Adolescence
- TEACH ED 327 Educating Exceptional Children or SPCH LNG 336 The Field of Special Education

#### General Electives (4 units)

- · Biological sciences
- Additional science
- Additional social science
- English literature

#### **Courses Open to Undergraduates**

MUSIC ED 230-0 Flute Class (.5)

MUSIC ED 231-1,2 Guitar Class I, II (.5)

MUSIC ED 232-0 Voice Class (.5)

- MUSIC ED 233-0 Clarinet and Saxophone Class (.5)
- MUSIC ED 234-0 Double Reed Class (.5)
- MUSIC ED 235-0 High Brass Class (.5)
- MUSIC ED 236-0 Low Brass Class (.5)
- MUSIC ED 237-0 String Class I (.5)
- MUSIC ED 238-0 String Class II (.5)
- MUSIC ED 239-0 Percussion Class (.5)
- MUSIC ED 240-0 Recorder Class (.5)
- MUSIC ED 241-0 Guitar Techniques (.5)

MUSIC ED 258-0 Philosophy of Music Education

Philosophical issues in music education relating to the teaching and learning of music in schools.

**MUSIC ED 260-0 The Music Teacher As Communicator** Discussion and observation of school music programs and effective presentational skills.

MUSIC ED 335-0 Selected Topics in Music Education Topics vary; announced before registration. May be repeated.

**MUSIC ED 361-0 Teaching General Music I** For grades K–5, curriculum materials and strategies for developing musical growth. Laboratory experiences; developing creativity in the music classroom. Open only to music majors or with consent of instructor.

**MUSIC ED 362-0 Teaching General Music II** For grades 6–8, effective teaching of general music classes in the middle school. Available curriculum materials; innovative approaches.

MUSIC ED 363-0 Teaching High School Nonperformance Courses Planning and teaching high school music, arts,

humanities courses. Present practices; development of exemplary course plans.

**MUSIC ED 364-0 Teaching Instrumental Music I** Teaching and administrative principles for school instrumental music programs. Rehearsal dynamics, conducting, rehearsal room management, and pedagogy for secondary school instrumentalists.

#### MUSIC ED 365-0 Teaching Instrumental Music II Appli-

cation of teaching concepts consistent with aesthetic education to the instrumental music program. Jazz pedagogy and pedagogy for young instrumentalists. Prerequisite: 364.

**MUSIC ED 366-0 Teaching Choral Music I** Development and application of skills, knowledge, and understandings for teaching choral music in elementary and middle school.

**MUSIC ED 367-0 Teaching Choral Music II** Continuation of 366. High school choral program, curriculum model, repertoire, sight-reading, rehearsal techniques, programming, administration.

#### **MUSIC ED 368-0 Teaching Composition in the Schools**

Practical and research literature in teaching composition; design of curricular materials for teaching composition. Hardware and software in classroom settings.

#### MUSIC ED 369-0 Research and Evaluation in Music

**Education** Procedures and issues in research and evaluation in music teaching. Practical application of research to decision making.

MUSIC ED 399-0 Independent Study (.5-1)

#### Student Teaching Courses

Students are assigned to specific classes in cooperating schools under joint University/school supervision.

MUSIC ED 380-0 Student Teaching in the Elementary School: General Music (1-4)

MUSIC ED 381-0 Student Teaching in the Middle School/ Junior High School: General Music, Choral (1-4)

MUSIC ED 383-0 Student Teaching in the Senior High School: Choral and Nonperformance Courses (1-4)

MUSIC ED 385-0 Student Teaching in the Elementary School: Instrumental  $\left(1{-}4\right)$ 

MUSIC ED 386-0 Student Teaching in the Middle School/ Junior High School: Instrumental (1-4)

MUSIC ED 387-0 Student Teaching in the Senior High School: Instrumental and Nonperformance Courses (1-4)

#### Musicology Program

An undergraduate major in musicology is available within the bachelor of music degree or as a concentration within the bachelor of arts. The courses required for this specialization are selected from musicology, analysis, and the departmental core. As some of the courses are offered on a two-year alternating schedule, certain courses may not be available during a given academic year.

#### **Major Studies Requirement**

For a major in musicology, 19.5 course units are required:

- 350-355 History of Music (6 units)
- Music theory (3 units) selected from MUS THRY 321, 331, 352
- Keyboard skills (3 units)
- MUSIC 326 Advanced Aural Skills (.5 unit)
- German (3 units)
- Instrumental or vocal applied lessons (3 units)
- Senior project or thesis (1 unit) by fall quarter of senior year

#### **Courses Open to Undergraduates**

#### **MUSICOL 323-0 Proseminar in Ethnomusicology**

Ethnomusicology; its history, bibliographical resources, methods, and theories.

**MUSICOL 324-0 History and Practice of Criticism** Concepts and practice of present-day critical and descriptive writing about music; aesthetics and technique. Open to nonmusic students with consent of instructor.

**MUSICOL 326-0 Topics in World Music: Asia** The musical traditions of South Asia, East Asia, and Southeast Asia. Topics include characteristics of instruments and instrumental ensembles, sound structures, theatrical traditions, and vocal performance.

**MUSICOL 327-0 Topics in World Music: Africa** Introduces students to the diverse musics of Africa through the multidisciplinary lens of ethnomusicology. Topics include music learning and transmission, aesthetics, musical styles and structures, performance practice, compositional process, musical change, and the role of music in society.

**MUSICOL 328-0 Topics in World Music: The Americas** An ethnomusicological perspective on music of the Americas as influenced by the European, African, Hispanic, and native American cultures. The socioeconomic impact of jazz, rock, gospel, and popular music; the role of music in the spiritual and social life of the diverse peoples of the Americas.

**MUSICOL 329-0 Music and Islam** History; basic tenets, and aesthetic of Islam; the musics of Islamic cultures from North Africa, Spain, the Middle East, central Asia, and the Indian subcontinent. Methods of contextualizing musical cultures and critical methodology related to gender, postcolonial theory, and religion.

**MUSICOL 330-0 Russian Fairy Tale and Opera** Russian cultural and national identity through the study of folk tales and their musical counterparts in such operas as Glinka's *Ruslan and Ludmila*, Tchaikovsky's *The Sleepers*, and Rimsky-Korsakov's *The Snow Maiden, Sadko*, and *The Tale of Tsar Saltan*. Current critical theory, concepts related to the portrayal of women, the interplay of nationalism and gender, and the dichotomy between East and West.

**MUSICOL 331-0 Orientalism and Music** The imagery of the East in the music of the West expressed in musical genres of various historical periods; focus on romantic opera

and contemporary musical culture. Orientalism as formulated by Edward Said and developed by John MacKenzie is defined and further clarified through references in literature and the visual arts.

**MUSICOL 334-0 Jazz: Its Roots and Elements** The basic elements of jazz from its roots in African and early African American music to the present. Prerequisite: consent of instructor.

**MUSICOL 335-0 Selected Topics in Musicology** Topics vary; announced before registration. May be repeated.

**MUSICOL 336-0 Learning and Creativity among Improviser/Composer** Interdisciplinary and cross-cultural perspective of the American jazz community. Analysis of improvisation as a compositional process. Prerequisites: INTG ART 190 and 291-3 or consent of instructor.

**MUSICOL 337-0 Improvisation and World Musicianship** Improvisation in Western art music, jazz, Indian, and African music; performance workshops in African drumming, Indian solfeggio, and rhythmic mnemonics.

**MUSICOL 338-0 African Mbira Music** The mbira, one of the most popular and ancient melodic instruments in black Africa. Construction; development of basic playing skills. Prerequisite: consent of instructor.

**MUSICOL 340-0 Music and Gender** The many intersections between music and ideas of gender; focus on issues of composition, characterization, patronage, and performance. Elite and popular forms of Western music from the Middle Ages to 2000 explored in relation to gender issues in musics of other cultures.

**MUSICOL 341-0 Music and the Visual Arts** The many ways in which the senses of sight and hearing interact in Western images of music and music making as well as in select musical works inspired by concurrent ideas or movements in the visual arts.

**MUSICOL 342-0 Authenticity** Focus on authenticity in music at the end of the 20th century and beginning of the 21st century by examining the three music genres most closely associated with the cultural and philosophical considerations of the idea: early music, country music, and "world" or "ethnic" music.

**MUSICOL 350-0 History of Music to 1499** Gregorian and medieval chant, secular monophony, and the development of polyphony from the earliest records through the music of Ockeghem and Busnois.

**MUSICOL 351-0 History of Music: The 16th Century** Middle and late Renaissance and early manifestations of the baroque, from Josquin through the Gabrielis.

**MUSICOL 352-0 History of Music: The 17th Century** The baroque from Monteverdi through Bach and Handel.

**MUSICOL 353-0 History of Music: The 18th Century** Representative works and critical studies of European art music from the Arcadian reform of opera through the Napoleonic era.

#### MUSICOL 354-0 History of Music: The 19th Century

Representative works and critical studies of European art music from the Congress of Vienna to the death of Mahler.

**MUSICOL 355-0 History of Music: The 20th Century** Representative works and critical studies of art music from Debussy to the present.

**MUSICOL 391-0 Early Music Ensemble** Performance of choral, solo, and instrumental music of the Middle Ages through the early baroque.

MUSICOL 399-0 Independent Study (.5-1)

#### Music Technology Program

The major in music technology offers a unique professional preparation for a career combining music and technology. Students engage in creating and using technology for artistic purposes. They develop skills in applying technology to musical tasks and acquire knowledge of the technical and musical foundations of the field.

#### **Major Studies Requirement**

For a major in music technology, 19.5 course units are required:

- 259 Introduction to Music Technology (1 unit)
- 325 Electronic Music Systems/Techniques (1 unit)
- 338 Programming I (1 unit)
- MUS COMP 340 Composing with Computers (1 unit)
- 300-level courses in music technology (4 units)
- 385 Terminal Project (1 unit)
- Courses related to terminal project (3 units)
- Departmental distribution (3 units) One 300-level course from three of the following programs: music education, musicology, music theory, music composition
- Instrumental, vocal, and/or composition lessons and/or additional ensemble (4.5 units)

#### **Courses Open to Undergraduates**

**MUS TECH 259-0 Introduction to Music Technology** 

Computers and the music experience. Computer-aided instruction; music printing; MIDI sequencing; software development; word processing and other nonmusic topics. **MUS TECH 320-0 Physics of Sound** Principles of physical acoustics. Acoustics of musical instruments, the human voice, and concert halls. Fundamentals of psychoacoustics.

**MUS TECH 325-0 Electronic Music Systems/Techniques** Basic studio techniques, including synthesizers, samplers, tape recorders, computers, and MIDI interconnections. Lectures, small group and individual experimentation, and assignments. Discussion of compositional procedures; analysis of selected pieces. Prerequisite: permission of instructor.

#### MUS TECH 326-0 Electronic Music MIDI Systems/ Techniques and Composition I Use of analog and digital equipment, including sampling and synthesizing devices. Recording on two to eight tracks (analog and digital) and hard disk software on Mac. Lecture, demonstrations, and

individual discussions of projects. Prerequisites: 325 or equivalent and permission of instructor.

#### MUS TECH 327-0 Electronic Music MIDI Systems/

**Techniques and Composition II** Advanced instruction in analog and digital equipment, including sampling and synthesizing devices. Recording on two to eight tracks (analog and digital) and hard disk software on Mac. Lecture, demonstrations, and individual discussions of projects. Prerequisites: 326 or equivalent and permission of instructor.

**MUS TECH 335-0 Selected Topics in Music Technology** Topics vary; announced before registration. May be repeated with change of topic.

# MUS TECH 337-0 Multimedia Software Development

Software design in scripting languages and other multimedia support systems. Integration of CD-ROM, MIDI, music printing, digitized video and sound. Prerequisite: entry-level courses or equivalent experience.

**MUS TECH 338-0 Programming I** Syntax of programming language, program development, user interfaces, and music-specific algorithms. May be repeated when programming language changes. Prerequisite: entry-level course or equivalent experience.

**MUS TECH 339-0 Programming II** Techniques for creating musical applications; music-specific algorithms and programming techniques, music and sound representation. May be repeated when programming language changes. Prerequisite: 338.

**MUS COMP 340-0 Composing with Computers** See Music Composition Program.

**MUS COMP 341-0 Advanced Computer Composition** See Music Composition Program.

**MUS TECH 342-0 Computer Sound Processing** Simulation of musical instruments, the voice, room acoustics; digital filtering, effects processing; digital recording, mixing, editing. Prerequisite: entry-level course or equivalent experience.

MUS TECH 344-0 Advanced Projects in Music Technology

Individual instruction in projects related to music technology. Prerequisite: consent of instructor.

# MUS TECH 348-0 3-D Sound and Spatial Audio

Techniques and applications of 3-D sound and spatial audio. Topics include the physical acoustics and psychoacoustics of spatial hearing, simulating 3-D cues, stereo sound reproduction, multichannel audio formats, environmental acoustics and environmental simulation, computerhuman interfaces, and virtual reality applications.

**MUS TECH 385-0 Terminal Project** Independent project in music technology. Prerequisite: consent of program director.

MUS TECH 399-0 Independent Study (.5-1)

MUS TECH 434-0 Computers, Technology, and Music **Experience** Introduction to resources for musicians,

including performers, teachers, and scholars. Advanced computer software and hardware in a hands-on, projectoriented environment; custom design for multimedia and Internet.

199

#### MUS TECH 450-0 Advanced Audio Signal Processing

Techniques for digital-signal processing of audio signals with an emphasis on software design and implementation. Topics include equalization filtering, audio compression, "effects" processing such as flanging and chorusing, spectral display, the fast Fourier transform, fast convolution, reverberation simulation, and wave guide-based physical modeling algorithms.

#### Music Theory and Cognition Program

Undergraduates majoring in theory receive training in a variety of advanced analytical methods, including rhythmic analysis, tonal and atonal analysis, and Schenkerian analysis. Courses in perception and music technology are encouraged.

Undergraduates majoring in music cognition receive a broad education in music and the cognitive sciences. The emphasis is on "cognitive musicology," whereby music is studied as an important aspect of human ability and society, using the tools and insights of cognitive science and musicological research.

#### Major Studies Requirement (Music Theory)

For a major in music theory, 19.5 course units are required: • MUS COMP 316 Baroque Counterpoint (1 unit)

- MUS COMP 317 Renaissance Counterpoint (1 unit)
- 355-1 Atonal Analysis (1 unit)
- 432 Rhythmic Analysis (1 unit)
- MUSIC 327-1,2,3 Advanced Keyboard Skills (1.5 units)
- Instrumental, vocal, and/or composition lessons (6 units)
- Music technology (1 unit)
- Senior project (1 unit)
- Departmental distribution (2 units) One 300-level course from two of the following programs: music education, musicology, music technology, music composition
- Cognate areas (3 units)

required:

• 390 Theory Colloquium (0 units)

Major Studies Requirement (Music Cognition) For a major in music cognition, 19.5 course units are

- MUS THRY 351-1,2 Music Cognition (2 units)
- Analysis and technology (3 units)
- PSYCH 201 Statistical Methods (1 unit)
- PSYCH 205 Research Methods (1 unit)
- Cognate areas (3 units) Courses in psychology, linguistics, and communication sciences and disorders
- Instrumental, vocal, and/or composition lessons (3 units)
- Electives (6.5 units)
- Senior project (0 units)

#### **Courses Open to Undergraduates**

**MUS THRY 321-1,2 Analytical Techniques** Detailed analysis of all parameters of selected musical examples; compositional procedures as a means of developing an intelligent rationale for interpretation. Prerequisite: MUSIC 211-1,2,3 or consent of instructor.

**MUS THRY 322-0 Rhythm and Performance** Rhythmic analysis, focusing on those components of rhythm most likely to affect a performer's shaping of a musical work: durational rhythm, accent, grouping, meter, phrase rhythm, and rhythmic shape. Prerequisite: MUSIC 211-2 or permission of instructor.

**MUS THRY 323-0 Aesthetics of Music** An introduction to theories of musical aesthetics. Readings are drawn from primary sources and include the writings of philosophers, theorists, critics, and composers. Course is divided into three segments: history of musical aesthetics from the ancient Greeks to the 19th century, formal versus expressive values, and aesthetic issues of the 20th century. Prerequisite: MUSIC 211-2 or equivalent.

**MUS THRY 331-0 Analytical Studies** Extension and refinement of concepts and techniques acquired in MUSIC 111-1,2,3, MUSIC 211-1,2,3.

**MUS THRY 332-0 Rhythmic Analysis** Recent theoretical work on rhythm; analytical methodologies dealing with music primarily as a temporal process.

**MUS THRY 333-0 Pattern and Meaning in Music** Practical and innovative analytic techniques intended to focus on the expressive dimensions of musical meaning. These techniques are based on theories in the cognitive sciences that explain how musical meaning arises through the mapping of musical patterns onto patterns stored in memory. Prerequisite: MUSIC 211-2 or permission of instructor.

**MUS THRY 335-0 Selected Topics in Music Theory** Topics vary; announced before registration. May be repeated.

**MUS THRY 351-1,2 Music Cognition** Survey of issues and research methods in music cognition. Music listening, memory for music, development of skills.

**MUS THRY 352-0 Score Analysis Skills** Recognition of the character and succession of tonalities. Exploration of the expressive potentials residing in the conventional tonal system.

**MUS THRY 355-1,2 Atonal Analysis** Techniques for analysis of atonal and nonfunctional tonal music, including set-theoretic, serial, and parametric approaches. Emphasis on music of Schoenberg, Webern, Berg, Stravinsky, and Debussy. Selected readings in analytic literature. Prerequisite: MUSIC 211-1,2,3 or equivalent.

MUS THRY 385-0 Senior Project (1)

**MUS THRY 390-0 Theory Colloquium** (0) Discussion of current research in music theory.

MUS THRY 399-0 Independent Study (.5-1)

**MUS THRY 422-0 Semiotics of Music** Semiotics, the study of signs. How concepts drawn from linguistics, literary theory, philosophy, and cognitive science shed light on the nature of meaning in music. Readings from music semioticians; critical evaluation of writings of theorists, musicologists, and ethnomusicologists who have applied semiotic concepts to music; application of specific analytical techniques to the works of 19th and 20th century composers. Prerequisite: MUSIC 211-2 or equivalent.

**MUS THRY 423-0 20th-Century Tonality** Tonality as redefined over the 20th century by composers developing new ways of organizing pitch that preserve some aspects of functional tonality while abandoning others. Analysis and discussion of readings and individual works by Debussy, Janácek, Bartok, Stravinsky, Schoenberg, Berg, and others. Prerequisite: MUSIC 211-2 or equivalent.

**MUS THRY 424-0 Writing about Music** Intended for future music scholars. The entire writing process from choosing a topic to carrying out research: formulating an argument, creating an outline, drafting, editing, and polishing. Students read scholarly articles with a critical eye for style and structure; these articles then serve as models (or countermodels). Recommended for graduate student and advanced undergraduates in music theory and musicology.

**MUS THRY 432-0 Rhythmic Analysis** Designed for theory or composition majors. Recent theoretical work on rhythm; analytical methodologies dealing with music primarily as a temporal process. Prerequisite: consent of instructor.

#### **Music Performance Studies**

This department consists of the Conducting and Ensembles; Jazz Studies and Pedagogy; Piano, Organ, and Church Music; String Instruments; Voice and Opera; and Wind and Percussion Instruments Programs.

#### **Conducting and Ensembles Program**

Courses in the Conducting and Ensembles Program are available to all majors. While an ad hoc major in conducting is available to undergraduates, students are urged to consider majoring in conducting at the graduate level. Courses for the ad hoc major are selected in consultation with the department chair.

#### **Courses Open to Undergraduates**

**CONDUCT 320-0 Band Arranging** Transcriptions, arrangements, and composition for concert and symphonic bands. Editing, rescoring, and arranging for performance.

#### **CONDUCT 321-0 Writing for Choral Ensembles**

Composing and arranging for choral ensembles; selected choral repertoire; techniques and resources.

**CONDUCT 323-0 Marching Band Techniques** Writing for marching and pep bands; rehearsing for the marching band.

**CONDUCT 326-0 Basic Conducting** Fundamentals in both instrumental and choral conducting; transpositions, ranges,

and podium technique. Extensive laboratory experience with videotaped evaluation.

**CONDUCT 335-0 Selected Topics in Conducting** Topics relevant to the professional needs of conducting majors.

**CONDUCT 340-1,2,3 Advanced Conducting** Separate quarters of band, orchestral, and choral conducting that emphasize the techniques of score preparation and analysis, repertoire, and rehearsal methods. Prerequisite: 326 or equivalent. May be repeated for credit.

**CONDUCT 341-0 Advanced Choral Literature** A comprehensive examination of choral music literature from the Renaissance through the 20th century.

**CONDUCT 364-0 Choral Organizations** University Chorale, University Singers, University Chorus, and Women's Chorus. Open to all qualified students.

**CONDUCT 368-0 Chapel Choir** Open to all qualified students.

**CONDUCT 374-0 Band Organizations** Marching Band, Concert Band, Symphonic Band, Symphonic Wind Ensemble. Open to all qualified students.

**CONDUCT 377-0 Jazz Ensembles** Membership by audition in jazz ensembles.

**CONDUCT 378-0 Contemporary Music Ensemble** (0–.5) Membership by audition.

CONDUCT 380-0 Senior Recital (0)

**CONDUCT 393-0 Orchestral Organizations** Membership by audition in Symphony Orchestra, Chamber Orchestra, or Philharmonia.

CONDUCT 399-0 Independent Study (1)

#### Jazz Studies and Pedagogy Program

The major in jazz studies combines courses in jazz improvisation, composition/arranging, history, and ensembles with a menu of electives. In addition to jazz lessons, students take two years of applied lessons, with further applied study available on an elective basis (as are Wind Ensemble and other nonjazz ensembles). Candidates must demonstrate by audition that they can meet the expectations of the applied studio as well as the jazz curriculum.

#### Major Studies Requirement

For a major in jazz studies, 19.5 to 20.5 course units are required:

- 100-level performance study (1.5 units)
- 110 Jazz Perspectives (1 unit)
- 162 Applied Jazz Improvisation (1.5 units)
- 200-level performance study (1.5 units)
- 262 Applied Jazz Improvisation (1.5 units)
- 300-level applied jazz studies (6 units)
  330 Writing for Jazz Ensembles (1 unit)
  331 Advanced Jazz Writing (1–2 units)
  MUSICOL 334 Jazz: Its Roots and Elements (1 unit)
  362 Applied Jazz Improvisation (3–4 units)

• 361-1,2 Jazz Piano for the Non-Keyboard Player (0–1 unit)

201

- 380 Senior Recital (0 units)
- Jazz Ensembles (6.5 units: 6 units of large and small, .5 units of large or small) CONDUCT 377 Jazz Ensembles (3–3.5 units) WIND PER 391 Chamber Music (3–3.5 units)
- MUSIC 389 Convocation (4 quarters) (0 units)

#### **Courses Open to Undergraduates**

JAZZ ST 110-0 Jazz Perspectives Overview of jazz training (history, improvisation, theory) and career development (music industry). Introduction to jazz texts and recorded resources. Prerequisite: consent of instructor.

**JAZZ ST 162-0 Applied Jazz Improvisation** (.5) Individual study focused on the practical application of melodic, rhythmic, harmonic, formal, and textural elements applied to the aural tradition of jazz improvisation. May be repeated for credit. Prerequisite: consent of instructor.

JAZZ ST 262-0 Applied Jazz Improvisation (.5) Continuation of 162 for sophomores. May be repeated for credit. Prerequisite: consent of instructor.

JAZZ ST 330-0 Writing for Jazz Ensembles Composing and arranging for jazz ensemble. Score study and rehearsal techniques with jazz groups and stage bands.

JAZZ ST 331-0 Advanced Jazz Writing Continuation of 330. Emphasis on creative scoring, composition, and commercial writing.

JAZZ ST 332-0 Jazz Improvisation for Music Educators Individual instruction and hands-on performing. Whether learning from scratch or improving rusty skills, everyone can improvise. Accompaniment will include a jazz trio. Vocalists and instrumentalists are equally welcome and may observe the jazz instruction in the concurrent National High School Music Institute.

JAZZ ST 333-0 Jazz Theory Chord symbols, melodic and harmonic structures, and other theoretical analyses as applied to jazz improvisation, composition, and arranging. Designed for music educators. Prerequisite: classical theory background.

JAZZ ST 335-0 Selected Topics in Jazz Studies Topics vary. May be repeated for credit as topics change.

JAZZ ST 336-0 Basic Jazz Improvisation Basic elements of jazz improvisation, including harmony, modes, and basic progressions. For nonjazz majors. Prerequisite: consent of instructor.

JAZZ ST 337-0 Advanced Jazz Improvisation Continuation of development of jazz improvisation skills. Prerequisite: 336 or consent of instructor.

**JAZZ ST 361-1,2 Jazz Piano for the Non-Keyboard Player** (0–1) Jazz voicing, harmonization, analysis, and technique through keyboard instruction. Prerequisite: basic keyboard proficiency, jazz performance and harmonic background.

JAZZ ST 362-0 Applied Jazz Improvisation Advanced elements of jazz improvisation, including harmony, modes, and progressions. Prerequisite: consent of instructor. JAZZ ST 380-0 Senior Recital (0)

# Piano, Organ, and Church Music Program

The Piano, Organ, and Church Music Program offers majors in piano performance and organ performance and a concentration in church music.

A major in piano performance combines a strong musical basis for a professional career with the broad humanistic interests embodied in a liberal arts education. The course of instruction focuses on the studio and includes private lessons, studio classes, a thorough course in piano repertoire, piano pedagogy, and accompanying classes. Electives are available in chamber music and other areas, allowing students to tailor a program to their individual needs. Frequent performances as a soloist and as an assisting musician develop skills in public presentation. Solo recitals, required in both the junior and senior years, are considered an integral part of the programs.

A major in organ performance and church music studies provides students with a solid foundation for a professional career in performance and in liturgical settings. In addition to a core liberal arts curriculum, the course of instruction includes private lessons, studio class, organ literature, service playing, and organ pedagogy. The Chicago area offers numerous opportunities for service playing experience. A junior recital is optional; a senior recital is required.

For a concentration in church music, consult the coordinator of organ and church music.

# Major Studies Requirement in Piano Performance

For a major in piano performance, 20 course units are required:

- PIANO 161 Piano Performance (3 units)
- PIANO 261 Piano Performance (3 units)
- PIANO 361 Piano Performance (6 units)
- PIANO 313 Piano Repertoire (3 units)
- PIANO 315 Piano Pedagogy (3 units)
- PIANO 391 or 392 Chamber Music (.5 unit)
- MUSIC 389 Convocation (4 quarters) (0 units)
- PIANO 328 Accompanying/Recital Preparation (1.5 units)
- Junior Recital (0 units)
- PIANO 380 Senior Recital (0 units)

Students enrolled in a five-year double-degree program may substitute three 300-level musicology and/or music theory electives for the pedagogy requirement.

#### **Major Studies Requirement in Organ Performance** For a major in organ performance, 20 course units are required:

- ORGAN 163 Organ Performance (3 units)
- ORGAN 263 Organ Performance (3 units)
- ORGAN 363 Organ Performance (6 units)
- 300-level courses in musicology and/or music theory (2 units)

- Counterpoint and conducting (3 units)
- Organ literature (1 unit)
- Appropriate course work (2 units)
- ORGAN 380 Senior Recital (0 units)
- MUSIC 389 Convocation (4 quarters) (0 units)

#### Piano

# Courses Open to Undergraduates

# PIANO 161-0, 261-0, 361-0 Piano Performance

**PIANO 230-0 Class Organ** (0) Primarily for sophomore pianists.

**PIANO 313-1,2,3 Piano Repertoire** Analytical and historical study of piano solo and concerto repertoire from early keyboard literature to the present.

**PIANO 315-1,2,3 Piano Pedagogy** Lecture/demonstration/ laboratory course in piano teaching at all levels. Principles and techniques of group and individual instruction; survey of teaching materials. Seniors and graduate students.

**PIANO 328-0 Accompanying/Recital Preparation** (.5) Piano students work with a singer and instrumentalist in the preparation and performance of mainstream recital repertoire.

**PIANO 335-0 Selected Topics in Piano** Topics vary; announced before registration. May be repeated.

PIANO 380-0 Senior Recital (0)

PIANO 391-0 Chamber Music (.5) For juniors and seniors.

PIANO 392-0 Chamber Music: Trios PIANO 399-0 Independent Study (.5-1)

#### Organ

Courses Open to Undergraduates

ORGAN 163-0, 263-0, 363-0 Organ Performance

ORGAN 310-1,2,3 Keyboard Harmony/Improvisation

**ORGAN 311-0 Professional Concerns** (.5)

**ORGAN 312-0 Voice** 

**ORGAN 313-0 Harpsichord Class** Harpsichord lessons for piano or organ majors. Other students accepted with permission of instructor.

**ORGAN 315-0 Organ Maintenance** 

**ORGAN 316-0 Organ Pedagogy** (.5) Comparative methods, practice techniques; repertoire for various levels.

**ORGAN 335-0 Selected Topics in Organ and Church Music** Topics vary; announced before registration. May be repeated.

**ORGAN 371-0 German Organ Literature** The German organ school pre–J. S. Bach to present.

**ORGAN 372-0 French Organ Literature** The French organ school from 1600 to present.

ORGAN 380-0 Senior Recital (0)

#### String Instruments Program

Majors in string instruments prepare for professional performance and teaching as well as for advanced study. The curriculum is built around individual performance study and ensemble participation, including chamber music and orchestra, with orchestral studies and string pedagogy available to qualified juniors and seniors. A junior recital and a senior recital are required. Students in this program may major in violin, viola, cello, string bass, harp, or classical guitar.

#### **Major Studies Requirement**

For a major in string performance, 19.5 to 21 course units are required:

#### Violin, viola, cello, string bass performance

- 100-level performance study (3 units)
- 200-level performance study (3 units)
- 300-level performance study (6 units)
- 300-level string pedagogy (1.5 units)
- 319-1,2,3 Orchestral Studies (1.5 units)
- 380 Senior Recital (0 units)
- 391 Chamber Music (1.5 units)
- CONDUCT 393 Orchestral Organizations (additional 4.5 units)
- MUSIC 389 Convocation (4 quarters) (0 units)

#### Harp Performance

- 100-level performance study (3 units)
- 200-level performance study (3 units)
- 300-level performance study (6 units)
- Large ensemble (additional 4.5 units)
- 318-1,2,3 Harp Pedagogy and Maintenance (1.5 units)
- 319-1,2,3 Orchestral Studies (1.5 units)
- 380 Senior Recital (0 units)
- MUSIC 389 Convocation (4 quarters) (0 units)

#### Guitar Performance

- 100-level performance study (3 units)
- 200-level performance study (3 units)
- 300-level performance study (6 units)
- 374 Guitar Ensemble (additional 4.5 units)
- 375-1,2,3 Lute and Guitar Literature (1.5 units)
- 376-1,2,3 Guitar Pedagogy (1.5 units)
- 380 Senior Recital (0 units)
- MUSIC 389 Convocation (4 quarters) (0 units)

#### **Courses Open to Undergraduates**

STRINGS 141-0, 241-0, 341-0 Violin Performance STRINGS 142-0, 242-0, 342-0 Viola Performance STRINGS 143-0, 243-0, 343-0 Cello Performance STRINGS 144-0, 244-0, 344-0 String Bass Performance STRINGS 151-0, 251-0, 351-0 Harp Performance STRINGS 171-0, 271-0, 371-0 Classical Guitar Performance **STRINGS 311-0 Suzuki Pedagogy** Fundamental principles of Suzuki philosophy and materials. Available to violin, viola, cello, and double bass players with emphasis on application to violin and cello.

203

**STRINGS 312-0 String Class Pedagogy** Group teaching strategies, program administration, materials and techniques, and pedagogy for violin, viola, cello, and double bass. For performance and pedagogy majors; secondary instruments and pedagogical applications to school settings and/or college-level techniques classes.

# **STRINGS 313-0 History of String Pedagogy** Historical survey of the major violin, viola, cello, and double bass pedagogues from the early baroque through the 20th century; study of publications and contributions of contemporary schools. Lecture and seminar format.

#### STRINGS 314-0 Comprehensive String Pedagogy

Comparative study and application of the principles of successful string teaching. Communication skills, observations, comparison of contemporary approaches of Suzuki, Rolland, Havas, et al. Lecture, discussion, and demonstration format. Open to all string players.

#### STRINGS 315-1,2 Beginning Violin and Viola Pedagogy

(.5) Developmental approach to individual and group teaching of elementary-level violin and viola students. Includes Rolland and Suzuki approaches, apprenticeship teaching, and observations. Open to all string players.

#### STRINGS 316-1,2 Beginning Cello and Double Bass

**Pedagogy** (.5) Developmental approach to individual and group teaching of elementary-level cello and double bass students. Open to all string players.

#### STRINGS 317-0 Principles of Advanced/College-Level

**Studio Teaching** (.5) In-depth analysis of individual instrument pedagogy for violin, viola, cello, or double bass according to major instrument. Taught by artist faculty. Open to all string players.

#### STRINGS 318-1,2,3 Harp Pedagogy and Maintenance (.5)

1. Guests and master classes related to playing and teaching. 2. Instrument maintenance and repair clinic with hands-on experience in routine maintenance and common repairs. 3. Pedagogical instruction and demonstration of teaching techniques for all levels and ages.

# STRINGS 319-1,2,3 Orchestral Studies (Violin, Viola, Cello, String Bass, Harp) (.5)

**STRINGS 327-0 Interpretation of Instrumental Chamber Music** Analysis of performance practices and interpretation of selected chamber works; emphasis on string performance, but may include winds and keyboard.

# **STRINGS 335-0 Selected Topics in Strings** Topics vary; announced before registration. May be repeated.

**STRINGS 372-0 Guitar Literature and Ensemble** Concurrent registration in 374 and 375-1,2,3 required for three consecutive quarters. Alternates yearly with 373.

#### STRINGS 373-0 Guitar Pedagogy and Ensemble

Concurrent registration in 374 and 376-1,2,3 required for three consecutive quarters. Alternates yearly with 372.

**STRINGS 374-0 Guitar Ensemble** Performance of the chamber literature for guitar: guitar duos, trios, and quartets; flute and guitar; voice and guitar; chamber works with strings; other instrumental combinations.

**STRINGS 375-1,2,3 Lute and Guitar Literature** Analytical and historical survey of the literature for plucked instruments from the 16th through the 20th centuries. The study of tablatures, instrument construction and tuning, performance practice, and style.

**STRINGS 376-1,2,3 Guitar Pedagogy** Principles of individual and group study. Survey of development of right- and left-hand technique from 16th-century lute and vihuela tutors through modern classical guitar methods. Interaction between musical texture and technical innovations; influence of fingering on stylistic inflection and ornamentation. **STRINGS 380-0 Senior Recital** (0)

**STRINGS 391-0 Chamber Music** (.5) Performance of string quartet literature with the addition of some works for piano and strings. For freshmen and sophomores.

STRINGS 399-0 Independent Study (.5-1)

#### Voice and Opera Program

Students majoring in voice take a concentrated program of courses designed to prepare them for professional performance. In addition to individual instruction, students take courses in musicology, vocal science, conducting, opera workshop, repertoire, and foreign language. A senior recital is required, and students are urged to take advantage of the numerous other performance opportunities offered by the school.

The Northwestern Opera Center is supported by a generous endowment in memory of the famous American soprano Edith Mason Ragland. The internationally acclaimed Edith Mason and William E. Ragland Opera Theater presents scene recitals and full-scale productions.

#### **Major Studies Requirement**

For a major in voice performance, 21 course units are required:

- 110 Voice Performance (3 units)
- 210 Voice Performance (3 units)
- 310 Voice Performance (6 units)
- Major choral ensemble (additional 4.5 units)
- 323 Study of the Vocal Mechanism (.5 unit)
- CONDUCT 326 Basic Conducting (1 unit)
- 351-1,2,3 Acting Techniques for the Opera Singer (1.5 units)
- 352-1,2,3 Opera Laboratory (1.5 units)
- 111-1,2,3 Phonetics and Diction (0 units)
- 211-1,2,3 Sophomore Practicum (0 units)
- MUSIC 389 Convocation (4 quarters) (0 units)
- 380 Senior Recital (0 units)

It is recommended that voice performance majors take three units of one foreign language and achieve a level-five competency in Keyboard Skills. See the voice coordinator concerning the honors program in voice performance.

#### **Courses Open to Undergraduates**

**VOICE 102-0 Beginning Voice** Class instruction for Music Theatre Certificate students. Basic music skills required. Prerequisite: admission to the Music Theatre Program.

**VOICE 110-0, 210-0, 310-0 Voice Performance** Lessons consist of private and group instruction (studio class), with each student receiving the equivalent of 50 minutes of instruction weekly.

**VOICE 111-1,2,3 Phonetics and Diction** (0) Required of freshman and transfer students majoring in voice. Three quarters: Italian, German, French.

**VOICE 202-0 Intermediate Voice** Private instruction for Music Theatre Certificate students. Prerequisite: admission to the Music Theatre Program and 102 or equivalent.

#### VOICE 211-1,2,3 Sophomore Practicum (0)

**VOICE 323-0 Study of the Vocal Mechanism** Lectures, readings, discussions, and demonstrations of basic vocal physiology, common vocal problems, and use of exercises and songs for vocal improvement. Prerequisite: a major in voice with junior or senior standing, or consent of instructor.

**VOICE 335-0 Selected Topics in Voice** (.5–1) Topics vary; announced before registration. May be repeated.

**VOICE 351-1,2,3 Acting Techniques for the Opera Singer** (.5) Advanced techniques for the performance of arias and songs; methods of text and character analysis; audition techniques; study of opera and musical theater repertoire. Juniors only. Must be taken sequentially.

**VOICE 352-1,2,3 Opera Laboratory** (.5) Performance and audition techniques of operatic repertoire; character analysis and scene study. Repertoire ranges from baroque opera through contemporary opera and musical theater. Seniors and graduate students only. Prerequisite: 351-1,2,3, or consent of instructor. Must be taken sequentially.

**VOICE 357-0 The German Lied** (.5) Schubert and Schumann song cycles and Brahms, Berg, Mahler, Strauss, and Wagner songs. Incorporation of chamber music and study of original poetry.

**VOICE 358-0 Is Technique Enough?** (.5) The relationship between repertoire choice and development of vocal technique.

**VOICE 363-0 Opera Performance** Preparation and performance of a major operatic role.

VOICE 380-0 Senior Recital (0)

**VOICE 399-0 Independent Study** (.5–1) Permission of instructor and department required.

#### Wind and Percussion Instruments Program

Designed to prepare students for professional performance and teaching as well as for advanced study, the major in wind and percussion instruments offers a concentrated curriculum emphasizing performance studies, frequent master classes, required participation in large and small ensembles, and a required senior recital. Students anticipating graduate study in wind or percussion performance are advised to elect additional courses in 300-level theory and history.

#### **Major Studies Requirement**

For a major in wind and percussion performance, 19.5 course units are required:

- 111–31 Performance study (3 units)
- 211–31 Performance study (3 units)
- 311-31 Performance study (6 units)
- Large ensemble (additional 4.5 units)
- 391 Chamber Music (3 units)
- MUSIC 389 Convocation (4 quarters) (0 units)
- 380 Senior Recital (0)

#### **Courses Open to Undergraduates**

WIND PER 111-0, 211-0, 311-0 Flute Performance WIND PER 112-0, 212-0, 312-0 Oboe Performance WIND PER 113-0, 213-0, 313-0 Clarinet Performance WIND PER 114-0, 214-0, 314-0 Saxophone Performance WIND PER 115-0, 215-0, 315-0 Bassoon Performance WIND PER 121-0, 221-0, 321-0 Trumpet Performance WIND PER 122-0, 222-0, 322-0 French Horn Performance WIND PER 123-0, 223-0, 323-0 Euphonium Performance WIND PER 124-0, 224-0, 324-0 Trombone Performance WIND PER 125-0, 225-0, 325-0 Tuba Performance WIND PER 131-0, 231-0, 331-0 Percussion Performance WIND PER 335-0 Selected Topics in Winds and

**Percussion** Topics vary; announced before registration. May be repeated.

**WIND PER 336-0 Woodwind Orchestral Repertoire** Wind section performance practices and performance techniques in the standard orchestra literature.

WIND PER 337-0 Interpretation of Instrumental Chamber Music Coaching in the preparation and rehearsal of chamber music for strings, winds, keyboard, and voice.

**WIND PER 338-0 Brass Orchestral Repertoire** Study of brass section performance practice and performance techniques in the 19th- and 20th-century orchestral repertoire. Limited to junior, senior, and graduate students. May be repeated once.

**WIND PER 339-0 Performance Practices and Criticism** Performance and criticism of woodwind, brass, and percussion repertoire in a master class setting. Team-taught.

#### WIND PER 341-0 Woodwind Instrument Repertoire

Survey of woodwind literature and performance practices; solos and chamber music for various performance levels. **WIND PER 342-0 Brass Instrument Repertoire** Brass liter-

205

ature and performance practices; solos, pedagogical materials, and chamber music for various levels of performance.

**WIND PER 347-0 Percussion Pedagogy and Performance** Methods, materials, and writings related to percussion playing and teaching. Prerequisite: 300-level standing in percussion performance or consent of instructor.

WIND PER 352-0 Preparing for an Audition

WIND PER 353-0 Introduction to the Harp

WIND PER 354-0 Woodwind Instrument Repair

WIND PER 355-0 Freelance Musician

WIND PER 356-0 Making Musicianship Audible

WIND PER 357-0 Reedmaking for Single Reed Instruments

WIND PER 359-0 Brass Teaching Techniques WIND PER 380-0 Senior Recital (0)

**WIND PER 391-0 Chamber Music** Percussion and mallet ensembles, brass ensembles, woodwind quintets, saxophone quartets, clarinet quartets, and jazz combos.

WIND PER 399-0 Independent Study (.5-1)

# **School of Speech**

Speech is the primary mode of communication, the principal means by which people exchange ideas and feelings. It is a means of inquiry and reporting. It is a means of persuasion. And it is a means of appreciation, inspiration, and entertainment. Students of speech study the nature of such communication and the conditions, circumstances, and properties affecting it. They may concentrate on speech as a scientific phenomenon, as a fine art, or as a rhetorical art.

Speech is conversation, discussion, debate, and public address. It is the performance of prose, poetry, and dramatic literature. It is theatre — acting, directing, and exploring the many facets of the physical theatre and dramatic production. It is radio, television, and film the media of mass communication. It is the study of language and the analysis and improvement of speech and hearing disabilities. And it is the preparation of teachers, directors, clinicians, and other professionals in these fields. It is study and research in all these areas.

Founded by Robert Cumnock in 1878, the School of Speech is now the third largest of Northwestern's six undergraduate divisions. It annually enrolls more than 1,200 undergraduate majors and 400 graduate students.

Originally, the curriculum and its related activities were concerned with public speaking and interpretative reading as performing arts. As the field and the school grew, the faculty added instruction in theatre, speech pathology, audiology, radio, television, film, and other specialties in oral communication. The five departments of instruction indicate the scope of the modern curriculum: performance studies; communication studies; radio/television/film; communication sciences and disorders; and theatre (including dance). In addition to the specialized program presented by each department, the five departments of the School of Speech combine to offer the undergraduate degree program in interdepartmental studies. All departments offer graduate courses. The School of Speech sponsors six divisions of Northwestern's National High School Institute: dance, debate, media arts, and theatre arts.

This wide range of educational activities is currently housed not only in the school's original building, Annie May Swift Hall, but also in Harris Hall; two former residences on Chicago Avenue; the Communication Sciences and Disorders complex, which includes the Frances Searle Building and the medical facilities in Chicago; the Theatre and Interpretation Center; and John J. Louis Hall, a stateof-the-art studio production facility.

For more information, see the school's Web site at www.speech.northwestern.edu.

#### Academic Policies

#### Requirements for the Degree of Bachelor of Science in Speech

The School of Speech grants the degree of bachelor of science in speech upon (1) the satisfactory completion of 45 course units; (2) the fulfillment of the distribution requirement of the student's major department; and (3) the completion of an approved program of study in speech and related fields suited to the student's special interests and needs. If students interrupt the program of study for an extended period of time and degree requirements are changed during this period, they are normally held to the new requirements.

In addition to and independent of the requirements set by the School of Speech, students must satisfy the Undergraduate Residence Requirement (see Undergraduate Education).

#### General Requirements

Of the required 45 courses, the last 23 courses must be taken while the student is enrolled as an undergraduate in Northwestern University, and the student must be enrolled in the School of Speech for the last three quarters preceding the granting of the degree. Credit for summer work taken at other colleges or universities as part of the last 23 courses requires approval by petition.

Thirty-five of the required 45 units must be completed with grades of A, B, or C. A minimum of 18 courses must be taken outside the School of Speech. No more than 18 of the 45 courses offered for the degree may be taken in the major department. A transfer student will be required to complete at least 11 courses in the School of Speech at Northwestern. A speech placement interview is required at the time of first registration for all transfer students.

#### **Distribution Requirements**

All major programs in speech require 18 courses outside the major department in the following areas:

- Science, mathematics, and technology
- Individual and social behavior
- Humanities and fine arts

Students should consult the department concerned for the range of disciplines within each category and the number of courses required.

#### *Major Programs in Speech and Related Requirements*

All students in the School of Speech must meet the requirements of one of the following major programs: interdepartmental studies, communication sciences and disorders, communication studies, performance studies, radio/television/film, or theatre (including dance). Basic speech courses are required in all programs, and provisions are made for study in other divisions of the University to complement the major program.

#### Student Conduct in Speech Courses

All undergraduate students enrolled in School of Speech courses are held accountable to the University's standards of academic integrity (see Academic Regulations in the Undergraduate Education section of this catalog). They also are responsible for compliance with the following standards:

- Attendance is required in all courses, and excessive absence is cause for failure
- Credit will not be given for two courses that meet at the same time
- All assigned work must be completed to receive course credit
- Assignments must be turned in on time, and examinations must be taken as scheduled; assignments cannot be made up or grades of incomplete given without prior approval from the instructor

#### Teaching Certification

The Department of Communication Sciences and Disorders offers a program leading to public school certification.

#### **Faculty Mentors**

Each new student is assigned a faculty mentor in the chosen major field within speech. This mentor is available for consultation, especially for the purpose of planning for the next registration. Freshmen have a separate advising period before the fall registration. Ultimate responsibility for meeting degree requirements rests with the student.

# **Academic Options**

#### **Interdepartmental Studies**

This program provides an interdisciplinary opportunity within speech for students whose special interests are not satisfied by one of the established programs. Majors in interdepartmental studies may seek a general education with exposure to a broad range of disciplines or a professional preparation from two closely related areas of speech.

# *Requirements for a Major in Interdepartmental Studies*

- A minimum of 3 courses distributed among at least three departments and selected from the following: GEN SPCH 101, 102, 103, 104, 108; THEATRE 140-1, 140-2
- A minimum of 3 courses at the 200 level distributed among at least three departments
- An additional 10 courses in speech distributed among at least two departments, including at least 8 courses at the 300 or 400 level. It is the student's responsibility to take all courses prerequisite for 300- and 400-level courses. Eligible students are urged to elect 399 during their senior year; this independent study should be arranged to correlate two of the speech areas the student has studied.
- 6 courses at the 200 level or above outside speech, including at least 3 300-level courses. If they apply, courses taken to meet the distribution requirement may be used to satisfy this requirement.
- Major programs for undergraduate work must be approved by the associate dean for undergraduate affairs.

#### **Interschool Certificates and Adjunct Major**

For information about the interschool programs listed below, see the Other Undergraduate Programs section.

#### Art and Technology Program

Students majoring in radio/television/film may earn a minor in art and technology.

#### Integrated Arts Program

The interschool Integrated Arts Program offers courses leading to a minor that explore the creative process from the perspective of the artist in the disciplines of theatre, visual arts, music, dance, and media arts.

#### International Studies Program

International studies, an undergraduate interschool adjunct major that is taken in conjunction with a traditional major, is open to School of Speech students.

#### Music Theatre Program

The Certificate in Music Theatre provides the opportunity for School of Music students majoring in voice and School of Speech students majoring in theatre to create a second area of specialization.

#### Undergraduate Leadership Program

The Undergraduate Leadership Program, an interschool certificate program open to all undergraduates, helps students understand the nature of leadership and prepares them to become leaders.

#### Graduate Study

The School of Speech has been a national center for graduate study and research in the fields of communication arts and sciences for many years. Programs for the master of arts, master of fine arts, and doctor of philosophy degrees with majors in speech are administered by the Graduate School of Northwestern University. All candidates for these degrees must satisfy the Graduate School requirements. The school itself offers a master of science in communication.

The School of Speech offers departmental and thesis sequences leading to the master's degree as well as a program leading to the degree of master of science in communication with emphasis in communication management or communication systems. Requirements for the departmental and thesis master's degrees, the master of fine arts, and the doctor of philosophy degrees in any division of the School of Speech are described in the Graduate School catalog. Requirements for the master of science in communication degree are available from the School of Speech.

All departments of the School of Speech participate in graduate studies and research. Graduate programs may be relatively specialized in the offerings of one department or arranged to represent the offerings of two or more departments.

#### Introductory and Related Courses GEN SPCH 101-0 Interpersonal Communication

Laboratory experience in human interaction. Analysis of communication within groups.

**GEN SPCH 102-0 Public Speaking** Theory, composition, delivery, and criticism of public speeches.

**GEN SPCH 103-0 Analysis and Performance of Literature** Critical reading, written analysis, and performance of literary texts; general introduction to performance studies. Individual conferences.

**GEN SPCH 104-0 Argumentation and Debate** Theories of argumentation and debate, with many opportunities for practice. Analysis and evaluation of the discourse related to public controversies. Recommended for students planning to participate in intercollegiate debate.

**GEN SPCH 105-0 Improving Voice and Articulation** Study of basic communication processes for students wishing to improve their own speaking skills. Self-evaluation of articulation and voice; directed practice based on principles of normal speech production and elementary phonetics. Prerequisite: consent of instructor.

**GEN SPCH 108-0 Processes and Pathologies of Human Communication** Basic facts and principles of human communication and its disorders. Laboratory experience provides an introduction to research in human communication science.

**GEN SPCH 110-0 Voice for Performance** Intensive individual development and use of voice for performance.

**GEN SPCH 204-0 Paradigms and Strategies of Leadership** Theoretical models of leadership. Group vision, change, and decision making. Weekly student-led small groups discuss case studies.

# **Communication Sciences and Disorders**

The Department of Communication Sciences and Disorders is the locus at Northwestern of basic science and research in human communication and its disorders. It offers clinical training in audiology and hearing sciences, learning disabilities, and speech and language pathology. Undergraduate and graduate curricula emphasize the study of normal human communication and cognition, thereby providing a foundation for the study of disorders of hearing, speech, language, and learning. Classroom, clinical, and research facilities of the department are located in the Frances Searle Building on the Evanston campus, with the opportunity to do further clinical work at the Medical School on the Chicago campus.

#### Areas of Study for Departmental Majors

The undergraduate program in communication sciences and disorders is designed to provide a thorough background of information about human communication and its disorders. Basic science principles that underlie all human communication and cognition are emphasized. Students also are introduced to clinical issues that pertain to disorders of communication and learning.

Undergraduate majors in communication sciences and disorders may choose among four areas of concentration: human communication sciences, audiology and hearing sciences, learning disabilities, and speech and language pathology. Undergraduates may select their area of concentration any time after entering the department. However, they are encouraged to make this decision by the spring quarter of their sophomore year and are required to decide no later than the beginning of their junior year. (Students may always petition to change the area of concentration.)

#### Human Communication Sciences

This area of concentration is particularly well suited to students who plan to attend graduate or professional school in fields such as medicine, dentistry, psychology, biomedical engineering, or neuroscience. It also provides excellent preparation for students who plan to pursue graduate study in audiology and hearing sciences, learning disabilities, or speech and language pathology to conduct research in these areas or to engage in professional practice. In addition to taking a number of basic science courses in the Department of Communication Sciences and Disorders, students in this program take a minimum of 12 science, mathematics, engineering, and/or psychology courses outside the department.

Students admitted to the seven-year Honors Program in Medical Education with an emphasis in human communication sciences meet the 300- and 400-level course requirements of the department (see following description). However, because they spend only three years on the Evanston campus, they take fewer 100- and 200-level courses in the department and the School of Speech than some four-year undergraduates.

#### Audiology and Hearing Sciences

This area of concentration encompasses the study of hearing, hearing disorders, and the treatment of hearing disorders. Undergraduate course work in this program provides the scientific undergirding necessary for clinical practice and/or auditory research. Emphasis is on basic communication science, including study of the anatomical, physiological, and physical bases of hearing. Information on normal communication processes is presented. An introduction to audiologic assessment and hearing loss management is provided, with the opportunity for supervised clinical experience for advanced undergraduate students.

The professional degree program in audiology and hearing sciences is designed to prepare students for the clinical practice of audiology. Students interested in careers in auditory research may emphasize the development of research skills at the master's degree level to prepare for continued study at the doctoral level.

Students completing graduate study in audiology and hearing sciences may qualify for clinical certification by the American Speech-Language-Hearing Association (ASHA), Illinois state licensure in audiology, and registration with the Illinois Department of Public Health in the area of hearing aid dispensing. Audiology professionals may be employed in hospitals, community and university clinics, industry, schools, rehabilitation centers, and research laboratories. Advanced professionals may be self-employed in private practice.

#### Learning Disabilities

The undergraduate concentration in learning disabilities provides academic preparation for graduate study leading to the MA and PhD degrees in learning disabilities and related fields. The field of learning disabilities is concerned with learning processes and their dysfunctions, including disorders of perception, memory, language, and conceptualization. Such disorders lead to problems in the acquisition and use of oral language, reading, writing, and math skills that require specialized remediation. Undergraduate course work stresses theoretical, scientific, clinical, and educational issues as a foundation for advanced training. Students also may create an interdisciplinary program by combining learning disabilities with such ancillary fields as audiology, education, linguistics, neuroscience, psychology, or speech and language pathology.

The first two years of the undergraduate curriculum emphasize the psychological, linguistic, and biological bases of normal language and cognitive development. Clinical examples and observations in area clinics and local schools are incorporated into these courses. Advanced undergraduate courses are focused more directly on disorders in basic processes and on clinical applications of basic theory, including some supervised clinical teaching.

Graduates may enter MA or MA/PhD programs at Northwestern or elsewhere to pursue advanced work and certification as a specialist in learning disabilities or as a researcher. Learning disabilities specialists with master's or PhD degrees may work in public or private schools, universities, hospitals, or private practice.

#### Speech and Language Pathology

The undergraduate emphasis in speech and language pathology combines academic instruction with laboratory activities and supervised clinical experiences to give students a background for graduate study in the field. The first two years of the undergraduate curriculum emphasize the psychological, linguistic, neurological, acoustical, anatomical, and physiological bases of normal auditory and oral language behavior. As knowledge of normal speech, language, learning, and hearing processes increases, students are introduced to the communicative disorders that result from the disruption of these processes.

Advanced undergraduate courses are concerned with the nature, recognition, and management of common communicative disorders, such as problems of speech sound production, language development, fluency, and voice. This program also offers courses of study leading to the MA and PhD degrees as well as postdoctoral study in speech and language pathology. Graduate courses are concerned with the neurophysiologic and structural disorders affecting communication and with a more detailed study of disorders of language, fluency, articulation, and voice. Students study the theory, evaluation, and management of aphasia, cerebral palsy, cleft palate, laryngeal pathologies, and other complex disorders.

Students completing graduate programs of study in speech and language pathology may qualify for teaching certification by the Illinois State Board of Education, Illinois state licensure, and certification by the American Speech-Language-Hearing Association (ASHA). Professional speech and language pathologists work in schools, child development programs, specialized educational settings, universities, hospital clinics, rehabilitation centers, and private practice.

#### **Honors Program**

An honors program is available for students in their senior year who have maintained an outstanding undergraduate record through their junior year. Upon successful completion of an honors project, they will graduate with honors in communication sciences and disorders. Also see Honors and Prizes in the Undergraduate Education section of this catalog.

#### **Independent Study**

Upperclass students in the department may register for units of independent study, in which they work closely with a faculty member on a topic of mutual interest. Students interested in independent study should select courses that may lead to more advanced library or laboratory research.

#### Requirements for a Major in Communication Sciences and Disorders

- Introductory courses: GEN SPCH 108 or COMM SCI 101 and at least 2 of the following: GEN SPCH 101, 102, 103
- 200-level courses: 201, 202, 203, 200-level statistics course in psychology or education
- 300- and 400-level courses in communicative disorders:
   9 courses (excluding practicum courses), including at least
   1 in audiology and hearing sciences, learning disabilities, and speech and language pathology
- Electives: 14 courses, at least 8 of which must be outside the department

(Students who plan to work at the elementary or secondary level are advised to include courses in education and other areas that apply toward the requirements for a teaching certificate in their special field.)

- Courses taken in the department: No more than 18 can be counted toward the BSSp degree
- Writing proficiency requirement: All students must meet the writing proficiency requirement

• Residence requirement: enrollment in the department for the last five quarters preceding the granting of the degree

Also see the description of requirements for students admitted to the seven-year Honors Program in Medical Education under Areas of Study for Departmental Majors, Human Communication Sciences, earlier in this section.

#### **Basic Science**

#### Courses for Undergraduates and Graduates

**COMM SCI 101-0 Seminar in Communication Sciences and Disorders** Major topics of research interest in communicative disorders. Principles of research in communicative disorders.

**GEN SPCH 105-0 Improving Voice and Articulation** See Introductory and Related Courses.

**GEN SPCH 108-0 Processes and Pathologies of Human Communication** See Introductory and Related Courses.

**COMM SCI 201-0 Phonetics** Training in transcription of English speech sounds. Introduction to phonological analysis, dynamics of articulation, dialect variations.

**COMM SCI 202-0 Biological Foundations of Human Communication** Human anatomy, physiology, and neurology in relation to communicative behavior. Sensory, perceptual, cognitive, and motor processes.

**COMM SCI 203-0 Acoustics of Speech** The nature of sound. Production and analysis of speech spectra.

**COMM SCI 205-0 Study of Learning and Learning Problems in the Classroom** Application of three theories — stimulus-response, cognitive development, and psychoanalytic — to learning and learning problems in classrooms. Field placement in a classroom; supervised observations of a child with learning problems and a normal achieving classmate.

**COMM SCI 301-0 Anatomy and Physiology of the Vocal Mechanism** Anatomical and physiological mechanisms of breathing, phonation, and articulation. Laboratories include dissection and participation in physiological research. Prerequisite: sophomore standing or above.

**COMM SCI 302-0 Anatomy and Physiology of the Hearing Mechanism** Gross and fine structure, development, and function of the peripheral and central auditory system. Prerequisites: junior standing or above, 202 and 203, or consent of instructor.

**COMM SCI 303-0 Brain and Cognition** Brain anatomy and physiology, neuropsychological techniques, sensory physiology, and neural development. The brain's role in language, attention, learning and memory, thinking, intelligence, and reading.

**COMM SCI 304-0 Statistics in Communication Sciences and Disorders** Introduction to research design and data analysis in communication sciences and disorders; statistical inference.
**COMM SCI 305-1 Electronic Laboratory Instrumentation** Basic analog and digital electronic theory for the use, modification, and design of behavioral laboratory equip-

ment. Applications in speech and hearing.

**COMM SCI 305-2 Computer Laboratory Instrumentation** Computer use in the laboratory for equipment control and data acquisition. Real-time programming and networking between computers and laboratory equipment. Prerequisites: 305-1 and proficiency in any computer language.

**COMM SCI 306-0 Introduction to Psychoacoustics** Introduction to principles underlying perception of pitch, loudness, auditory space, speech; psychophysical procedures for studying psychoacoustics.

**COMM SCI 309-0 Culture, Language, and Learning** Language and culture; transmission of culture through language; effects of cultural variety on perception, cognition, and learning; implications of cultural and linguistic diversity in communicative disorders.

**COMM SCI 311-0 Principles of Electronics and Acoustics** Parallel development of concepts in electronics and acoustics that are useful for advanced laboratory research in communicative disorders and related fields.

**COMM SCI 312-0 Applied Research Methods in Human Communication Science** Survey, experimental, and clinical case-review methods pertinent to hearing, speech, language, and learning; discussion of research strategies. Laboratory.

COMM SCI 320-0 Physiologic Instrumentation

Fundamentals of physiological measurement and analysis. Use of physiological instrumentation for the transduction and measurement of speech articulator movement. Design of experiments and interpretation of data. Prerequisite: 301.

**COMM SCI 350-0 Cognitive Development in Atypical Learners** Introduction to theories of cognitive development; implications for the study of atypical learners; review of research on the impact of perceptual and language impairments on cognitive growth. Laboratory, with cognitive assessment procedures.

**COMM SCI 351-0 Development and Disorders of Memory** Scientific models and evidence for the development of memory. Memory disorders in relation to developmental and life span issues.

**COMM SCI 399-0 Independent Study** Prerequisite: consent of associate dean after submission of petition.

## Audiology and Hearing Sciences

## **Courses for Undergraduates and Graduates**

**AUD 318-0 Introduction to Audiology** Introduction to the measurement of hearing in humans. Basic anatomy of the ear, measurement of hearing, potential disorders of hearing. Lecture/laboratory.

**AUD 319-0 Pediatric Audiology** Etiological factors, assessment, and implications of hearing impairment, selection of hearing aids, remedial programs, counseling of

parents. Emphasis on hard-of-hearing infants and children. Prerequisite: 323 or consent of instructor.

## AUD 320-0 Pathologies of the Auditory System

Physiologic abnormalities of the auditory system that result in hearing impairments. Prerequisite: 323, COMM SCI 302, or equivalent.

**AUD 321-0 Evaluation and Use of Amplification Systems** Electroacoustic characteristics of the hearing aid, clinical selection of wearable amplification and group auditory training systems, and patient management. Lecture/ laboratory. Prerequisite: 323 or consent of instructor.

**AUD 323-0 Measurement of Hearing I** Basic audiometric and immittance techniques; interpretation of test results. Introduction to amplification systems. Lectures/ laboratories. Prerequisite: junior standing or above.

**AUD 324-0 Measurement of Hearing II** Audiometric techniques used in differential evaluation of cochlear, retrocochlear, and functional hearing loss. Calibration techniques. Prerequisite: 323 or equivalent.

AUD 325-0 Central Auditory Neurophysiology: Evoked Potentials Electrophysiologic evaluation of auditory, visual, and somatosensory systems, emphasizing electric response measures. Theoretical and practical considerations in clinical application; interpretation of test results. Prerequisite: 324 or equivalent.

**AUD 326-0 Vestibular Evaluation** Electrophysiological evaluation of the auditory system; consideration in the measurement of caloric nystagmus. Integration of electrophysiologic test findings with audiometric and immittance test results in clinical case studies of auditory and vestibular disorders. Prerequisite: 325 or consent of instructor.

**AUD 366-0 Hearing Impairment** Impact of impaired hearing on children and adults. Principles and practices in rehabilitation. Selection and use of sensory aids. Approaches to counseling. Assessment and remediation of communication problems, with emphasis on speech reading and auditory training techniques.

**AUD 368-0 Clinical Management of Hearing Impairment** Clinical practice in management of impaired hearing.

**AUD 467-0 Seminar: Advanced Topics in Management of Hearing Impairment** Current research and theory in aural rehabilitation.

## Learning Disabilities

## **Courses for Undergraduates and Graduates**

**LRN DIS 369-0 Special Topics in Learning Disabilities** Current scientific and professional problems in learning disabilities.

**LRN DIS 373-0 Introduction to Learning Disabilities** Psychological, neurological, and linguistic theories of language and learning as related to learning disabilities. Prerequisite: junior standing or above. **LRN DIS 375-0 Diagnostic Procedures for Exceptional Children** Principles and procedures for differential diagnosis. Characteristics of children with major disabling conditions.

LRN DIS 376-0 Remedial Education for Children with Learning Disabilities Remedial programs for children with learning disabilities. Teaching techniques for aphasia, dyslexia, and related disorders. Educational planning and placement. Prerequisite: junior standing or above or consent of instructor.

LRN DIS 380-0 Introduction to Clinical Procedures in Learning Disabilities Practicum experience in clinical settings. Learning processes and application of instructional approaches. Field studies, reading, and weekly seminars. Prerequisites: 375, 376.

LRN DIS 381-0 Social Development in Normal and Learning-Disabled Children Current theories of and empirical research on social-emotional development from infancy through adolescence; identification and treatment of social deficits in learning-disabled children.

## Speech and Language Pathology

**Courses for Undergraduates and Graduates SPCH LNG 334-0 Delivery Systems in Speech and Language Pathology** Organization and administration of speech-language pathology services in schools, health care agencies, and private practice. Prerequisite: 397.

**SPCH LNG 336-0 The Field of Special Education** Criteria for in-school evaluation, eligibility, and intervention for students with disabilities. Legal basis of policies and regulations. Prerequisite: junior standing or above.

SPCH LNG 369-0 Special Topics in Speech and Language Pathology Summer only.

SPCH LNG 391-0 Speech Sound Learning and the Modification of Articulation Development of speech production skills in children. Factors affecting phonological development. Assessment and modification of atypical articulatory patterns. Prerequisite: COMM SCI 201 or equivalent.

**SPCH LNG 392-0 Language Development and Usage** Theories and patterns of normal language development. Emphasis on cultural and individual diversity. Prerequisite: junior standing or above or consent of instructor.

**SPCH LNG 393-0 Vocal Physiology and Pathology** Normal and abnormal adaptations of respiration, phonation, and resonance to production of voice in speech. Techniques, materials, and instrumentation for voice diagnostics and therapy with children and adults. Prerequisites: COMM SCI 202, COMM SCI 301.

**SPCH LNG 394-0 Fluency, Disfluency, and Stuttering** Normal development of fluency and factors that may disrupt it. Introduction to nature, etiologies, development, and treatment of stuttering. Prerequisite: COMM SCI 201 or consent of instructor. SPCH LNG 396-0 Diagnostic Procedures in Speech and

**Language Pathology** Evaluation of speech and language disorders. Interviewing, report writing; use of standardized tests; examination of speech sensory and motor functions. Prerequisites: senior standing or above, 391 and 392, or consent of instructor.

**SPCH LNG 397-0 Introduction to Clinical Procedures in Speech and Language Pathology** Beginning practicum experience in a clinical setting. Emphasis on planning and executing a remedial program for individuals with problems of speech sound production and language usage. Prerequisite: consent of instructor.

**SPCH LNG 398-1,2 School Practicum in Speech and Language Pathology** Supervised practicum of speechlanguage pathology services in schools. Participation in parent-teacher conferences and on IEP teams. Prerequisites: 334, 397.

## **Communication Studies**

The Department of Communication Studies offers liberal arts–oriented course work focused on the most fundamental and pervasive of human activities. The study of human communication ranges from interpersonal processes such as persuasion and relationship formation to organizational processes such as group leadership and dispute resolution, as well as to the strategies and styles of public deliberation and debate and the political and cultural processes involving mass media and telecommunications systems. At the same time, the study of human communication encompasses the scholarly traditions of both the humanities and social sciences. The intellectual foundations for this study range from classical rhetoric to cognitive science, from the economics of computer-mediated communication networks to the ethics of public argument.

## **Course Concentrations for Departmental Majors**

The department has organized the wealth of theory and research on human communication — as well as the realworld applications of that theory and research — into six course concentrations. These are interrelated sets of courses that can help students coordinate their choice of classes with their intellectual interests, postgraduate educational plans, and career goals. Students who major in communication studies are encouraged, though not required, to organize their course work within one or two of these concentrations as described below.

## **Organizational Communication**

The success of all organizations — whether small neighborhood groups or giant multinational corporations depends on effective communication. Organizations must have members who are skilled in the basic communication activities of persuasion, group leadership and decision making, bargaining and negotiation, and team problem solving. And in the contemporary world, organizations also demand the knowledge necessary to analyze and act on

information gathered from surveys and other research methods, to harness the resources of communication technology, and to thrive in an environment of diverse individuals. This concentration includes courses that develop basic communication skills as well as courses that examine communication processes in such contexts as taskoriented groups and professional-client relationships. It also includes courses that focus on the organizational challenges associated with technology, information management, cultural diversity, and image building. This concentration will be of interest to students who wish to work - and who will seek to lead - in either business or not-for-profit organizations. To complete this concentration, students must take 201 and 260 and choose a minimum of four courses from the following: 205, 229, 250, 275, 329, 341, 350, 361, 362, 363, 364, 365, 371, 391, 392, and 393.

## **Communication Industries and Technologies**

Mass communication and telecommunications are reshaping the culture, commerce, and politics of the United States and the world. Media firms are merging into everlarger organizations that produce film, television, music, books, magazines, newspapers, and software for audiences worldwide. At the same time, technology is breaking down the old distinctions among computers, telephones, video, and print to create new networks that integrate video, voice, and data. These changes present new and sometimes unanticipated challenges to managers in business as well as to leaders in government, education, the arts, and the professions. This course concentration is intended for students who wish to prepare for these challenges by developing an understanding of the social, economic, legal, and technical aspects of mass communication and telecommunications. It will be of interest to students who seek careers in such communication fields as advertising and public relations, management of entertainment and information industries, and public policy making. To complete this concentration, students must select a minimum of six courses from the following: 201, 229, 275, 287, 330, 350, 370, 376, 377, 385, and 393.

## Rhetoric, Media, and Public Culture

Citizens of the 21st century must understand the communication opportunities, obligations, and risks that emerge in an era of cultural diversification and conflict. This course concentration examines the relationship between communication and culture from a rhetorical and critical perspective — that is, from a point of view emphasizing the use of language and image to characterize social reality, create forums for deliberation and debate, and confront controversial issues and cultural differences. The concentration includes courses that engage the issues raised by differences of race, class, gender, nationality, and political conviction. It also includes courses that examine such cultural processes as the legitimization of social authority, the construction of personal as well as national identity, and the articulation of national purpose and international obligation. The role of the mass media in these issues and processes is of particular concern. This course concentration is intended for students interested in positions of civic leadership, such as in community-based organizations, social reform movements, and cultural, political, and educational institutions. To complete this concentration, students must take 210 and one other 200-level course from the following: 225, 271, and 275. They must also select a minimum of four courses from the following: 315, 320, 325, 327, 328, 329, 330, 370, 371, 376, 377, 378, and 392.

#### **Relational Communication**

Our lives are spent in relationships with others. Most people are born into a family, form friendships, join work groups, and begin romantic attachments that sometimes turn into new family units. Interpersonal communication is the means by which we develop, maintain, and terminate these relationships. The relational communication concentration focuses on these processes. It has four components: courses examining the psychological variables that affect how people create and interpret the communication behaviors that occur during social interaction; courses examining the contexts in which relational communication occurs, such as the family and the work group; courses focusing on strategies and processes of interpersonal influence; and courses focusing on the impact of gender, culture, and other factors on the processes of relational communication. This concentration is intended for students interested in the psychological foundations of human communication as well as students interested in the helping professions (e.g., therapy, counseling). To complete this concentration, students must take two core courses, 201 and 241, and select a minimum of four courses from the following: 205, 250, 260, 341, 343, 344, 350, and 382.

## Media and Politics

Communication is essential to both effective leadership and citizen participation. Leaders must employ the arts and sciences of communication to negotiate policy, move public opinion, maintain relations with other nations, and of course, win votes. Citizens must understand these arts and sciences if they are to maintain self-government. This course concentration focuses on the role of communication in the political processes of modern democracies, especially on how government officials, candidates, and citizens interact with the mass media in the realm of public affairs. The concentration is intended for students interested in political organizing and consulting, opinion polling, policy analysis, and research work in public interest groups and other notfor-profit organizations. To complete this concentration, students must take 272 and a minimum of three courses from each of two groups: the political leadership group, focusing on the rhetoric and strategies of political persuasion, consisting of 315, 321, 325, 328, 380, and 391; and the citizen participation group, concerning Americans'

beliefs and the ways they respond to political information, consisting of 201, 205, 271, 370, 371, 372, 380, and 393.

## Argumentation and Advocacy

Lawyers, policy makers, and indeed all citizens must be able to put forward and defend their views when matters of common concern are debated. This course concentration is based on the conviction that the skills of advocacy can best be cultivated in the liberal arts tradition by uniting intensive practice in the arts of argumentation with theory-based understanding of advocacy and deliberation. In this concentration, courses emphasizing practice require students to think critically about their positions, plan their communicative strategies effectively, and argue their cases forcefully. Courses emphasizing understanding enlarge students' views of the traditions and institutions - especially the law that shape the processes of advocacy and deliberation on vital issues. Thus prepared, students can take their places as articulate citizens in the various communities to which they belong. The perspectives and skills offered in this concentration are particularly appropriate for students interested in law careers. To complete this concentration, students must select three practice-oriented courses from 214, 220, 221, and 250 as well as three theory-oriented courses from 205, 210, 321, 325, 330-1, 363, 364, 372, 391, and 393.

## General Requirements for a Major in Communication Studies

- 2 of the following: GEN SPCH 101, 102, 103, 104
- An additional 12 courses in speech, at least 9 of which must be in the department. At least 5 courses within the department must be at the 300 level. Not more than 1 unit of 393 Field Study in Communication and not more than 2 units of 399 Independent Study may be applied toward the total of 12 courses in speech.
- A field of concentration in an area other than speech (normally one of the disciplines of the Weinberg College of Arts and Sciences), consisting of at least 6 courses with half or more of this study at the 300 or 400 level. Courses taken to satisfy the distribution requirement may be applied to the field of concentration if they fall within the discipline in which the student chooses to concentrate.
- Electives in speech and other areas

## **Departmental Honors Program**

The Undergraduate Honors Program in Communication Studies offers an opportunity for highly motivated students to conduct original scholarly research. Through the senior year, each student works closely with faculty to produce an original research project in an interest area determined by the student. Seniors who complete the program graduate with departmental honors. Also see Honors and Prizes in the Undergraduate Education section of this catalog.

## **Courses Primarily for Freshmen and Sophomores**

**GEN SPCH 101-0 Interpersonal Communication** See Introductory and Related Courses.

**GEN SPCH 102-0 Public Speaking** See Introductory and Related Courses.

**GEN SPCH 104-0 Argumentation and Debate** See Introductory and Related Courses.

**COMM ST 201-0 Research Methods in Communication Studies** Foundations of knowledge in many areas of the field, including the nature of interpersonal interaction and the impact of mass media. How communication researchers do their work; how to judge the quality of research products. Prerequisite for many other courses in the department.

**COMM ST 205-0 Theories of Persuasion** Survey of major theories that explain how to change another person's attitudes and behaviors. Applications to persuasion within a variety of contexts, including relationships, organizations, legal campaigns, and the mass culture.

## COMM ST 210-0 The Arts of Controversy: An

**Introduction to Rhetorical Thinking** Controversy as a rhetorical practice essential to healthy political culture. Use of rhetoric to appreciate different (and frequently conflicting) approaches to issues.

**COMM ST 214-0 Legal Argumentation** Argumentation practices in the legal forum. Nature and procedures of legal controversies about what is just; modes of reasoning about fact and law; history and ethics of legal advocacy.

**COMM ST 215-0 Principles of Rhetorical Criticism** Introduction to the critical study of political, legal, and ceremonial rhetoric. Development of skills in analyzing and assessing such rhetoric and appreciating how it reflects

and shapes basic social and cultural values. PERF ST 216-0 Performance and Culture See

## Performance Studies.

**COMM ST 220-0 Theories of Argumentation** Fundamental principles and practice of critical reasoning and public argument. For students interested in legal, academic, or political realms of communication and advocacy.

**COMM ST 221-0 Speech Writing** Theory and practice in the principles of composition and in the preparation and delivery of manuscript speeches.

**COMM ST 225-0 Forms of Public Address** Selected genres of public address, including the eulogy, the censure, the inaugural, the apology, and the dedication.

**COMM ST 229-0 Communication Technology, Community, and Personal Identity** Philosophical, critical, and scientific analysis of how the intensification of technology in cultural, professional, and recreational domains is affecting our social relations and personal identities.

COMM ST 235-0 Philosophy of Language and Communication Relationship between language and human communication behavior. How language structures individual world views; the process of meaning formation; therapeutic communication; the experience of creativity.

**COMM ST 241-0 Theories of Relational Communication** An overview of communication theories and research dealing with developing, sustaining, and terminating interpersonal relationships. Direct application to friendship, work, and romantic relationships.

**COMM ST 250-0 Small Group Processes** Theories and research relating to communication in small groups and group decision making.

COMM ST 260-0 Theories of Organizational

**Communication** Theories and research dealing with communication in formal organizations and institutions.

**COMM ST 270-0 Theories of Mass Communication** Introductory survey of current issues in mass communication research. Workings and effects of media industries. Impact of media violence, effect of political news coverage and advertising, media effectiveness in public education.

**COMM ST 271-0 Race, Gender, and the Mass Media** How race and gender are constructed by the American mass media; how social groups use the media for their own purposes. News coverage of minorities, images of women and minorities in advertising, social effects of pornography.

**COMM ST 272-0 Communication and American Democracy** Role of communication processes in democratic governance. Importance of communication in civic life (voter participation, deliberation, conflict resolution, social movements) as illustrated in survey of democracies worldwide.

**COMM ST 275-0 Persuasive Images: Rhetoric of Contemporary Culture** Analysis of image-making in all forms of popular culture — in film and television but also shopping malls, supermarkets, car dealers, and doctors' offices.

**COMM ST 287-0 Communication Technology and Society** Basic introduction to communication technologies, both new and old. Societal and economic issues they raise, examined from a variety of disciplinary perspectives.

**COMM ST 290-0 Forensics** Independent research and analysis in conjunction with participation in intercollegiate forensics. Credit may not be earned for 290 more than once.

**COMM ST 298-0 Undergraduate Seminar** Student- or faculty-initiated seminars to consider special topics. Credit for 298 may be earned more than once. No more than two units of such credit may be applied toward fulfillment of the major requirements.

# Courses Primarily for Juniors, Seniors, and Graduates

**PERF ST 311-0 Performance in Everyday Life** See Performance Studies.

**COMM ST 315-0 Rhetoric of Social Movements** Study of traditional theories of opposition derived from sociological and rhetorical analyses of mass movements. Examines new

social movements as groups contesting abortion, animal rights, feminism, and other local and national issues.

**PERF ST 316-0 Folklore and Oral Traditions** See Performance Studies.

**COMM ST 320-0 Advanced Argumentation** Theories of argument drawn from classical and contemporary sources, with application to practice; making, judging, and appreciating forms of argument; consideration of their logical, ethical, and persuasive force. Prerequisite: 214 or 220.

**COMM ST 321-0 Public Argumentation** Training in the arts of public argument through examination of contemporary controversies over social policies, foreign affairs, cultural events, and trials of public character. Sequel to 210.

**COMM ST 322-0 Rhetoric of the American Presidency** Offers students the opportunity to conduct an in-depth, quarter-long study of the rhetoric of particular presidents.

**COMM ST 324-0 The Making of the Woman's Oratorical Tradition** American woman social reformers of the 19th century broke the taboo against female orators and proved themselves masters of the art. Development of the tradition from its origins in the 1820s through the early 20th century.

**COMM ST 325-1,2,3 Rhetorical History of the United States** History of the United States, as studied through key rhetorical texts. Focus on moments of political crisis and cultural change. **1.** Colonial period to the outbreak of the Civil War. **2.** Civil War to World War I. **3.** World War I to the present.

**COMM ST 326-0 African American Rhetoric** Survey of key texts of 20th-century African American public discourse as well as a forum to discuss those texts and engage them analytically and critically.

**COMM ST 327-0 Contemporary Rhetorical Practice** Contemporary history from a rhetorical perspective.

Analysis of public communications and rhetorical study of nonoratorical events; emphasis on social movements and political controversy in the United States since 1960.

**COMM ST 328-0 The Rhetoric of War** The genre of war rhetoric; American experience in the 20th century as drawn from speeches, diaries, newspaper reports, government documents, films, and poetry.

**COMM ST 329-0 Rhetoric, Science, and Technology** Contemporary debates on the standing and production of scientific argument. Current controversies over the social constitution and consequences of science and technology.

**COMM ST 330-1,2 Contemporary Problems in Freedom of Speech** Personal freedom and public communication under the U.S. Constitution. **1.** Principles, forms of reasoning, and court decisions governing conflicts between freedom of speech and public order, property rights, personal security, morality, and racial and gender equality in traditional, mass, and new electronic media. **2.** Analysis of selected issues introduced in 330-1. Prerequisite: 330-1.

**R/TV/F 330-0 Electronic Media Management** See Radio/ Television/Film. **R/TV/F 333-0 Cable Communications** See Radio/ Television/Film.

**COMM ST 341-0 Communication and Aging** Relationship between adult developmental processes and changes in communication behavior. Prerequisite: 201.

**R/TV/F 341-0 Technological Innovations** See Radio/ Television/Film.

**COMM ST 343-0 Social Cognition and Communication** In-depth analysis of theories examining the cognitive processes that occur before, during, and after interactions. Issues related to person perception, self-presentation, scripts, and schemas. Prerequisite: 201.

**COMM ST 344-0 Interpersonal Conflict** In-depth analysis of theories and research examining conflict within relationships. Special emphasis on conflict within friendships, dating relationships, and family. Prerequisites: 201 and 241.

**COMM ST 350-0 Computer-Mediated Communication and Information Systems** Examination and analysis of the tools of and issues in computer-mediated communication and networked information systems; effects of new communication technologies at the interpersonal, group, organizational, and societal levels.

**COMM ST 355-0 Audience Analysis** Methods used to analyze electronic media audiences, with emphasis on quantitative research techniques. Prerequisite: 201.

**COMM ST 360-0 Current Perspectives in Organizational Communication Research** Selected micro- and macro-level theories of communication behavior in organizational settings. Prerequisites: 201 and 260.

**COMM ST 361-0 Intergroup Communication and Urban Change** The small group as an agent of social change in urban society; internal and external communication in such change. Prerequisites: any two of 250, 260, and 270.

**COMM ST 362-0 Professional-Client Communication** Communication between professionals and clients in medicine, law, education, psychotherapy, and social services. Alternatives to the professional-client model of problem solving. Prerequisites: 201 and 260.

## COMM ST 363-0 Bargaining and Negotiation

Communication in bargaining and negotiation in organizational settings. Cognitive and motivational theories emphasizing bargaining and negotiation strategies. Prerequisites: 201, 205, and 260.

**COMM ST 364-0 Collective Decision Making and Communication in Organizations** Research on how organizations make, communicate, and implement collective decisions. Assessing decision effectiveness, group decision making, leadership in organizations, and organizational design. Prerequisite: 260 or equivalent.

**COMM ST 365-0 Solving Problems in Applied** 

**Organizational Communication** Advanced concepts and techniques for defining and analyzing organizational problems. Preparation for recognizing and working with problems in business organizations. Prerequisites: 201 and 260.

## COMM ST 370-0 Current Perspectives in Mass

**Communication Research** In-depth study of theories currently applied to the study of mass communication. Prerequisites: 201 and 270.

**COMM ST 371-0 Public Opinion** Nature of public opinion; history of techniques for expressing and assessing public opinion. Theories about the relationships among media, public opinion, and policy. Prerequisites: 201 and 270.

**COMM ST 372-0 Mass Communication and Campaign Strategies** Communication components of political campaigns, including broadcast advertising, direct mail, candidate speeches, debates, and news coverage. Campaign professionals share their expertise; students critically examine the effectiveness and appropriateness of campaign strategies and tactics. Prerequisites: 201 and 272.

**COMM ST 373-0 News Media and American Society** Examination of the news form, content and meaning of the news, and the role of the news media in social continuity and change.

**COMM ST 375-0 Rhetoric and the Arts** The impact of art forms such as theatre, music, dance, film, and television on the public. Critiquing of guest artists by students.

**COMM ST 376-0 The Rhetoric of Popular Criticism** How critics communicate their ideas and values to the public. Prerequisite: 275.

**COMM ST 377-0 Marketing Popular Culture** The invention and packaging of popular culture products, including film, music, television, and celebrities. Prerequisite: 275.

COMM ST 378-0 Rhetoric and Aesthetic Theory

Interpretation and critique of the impact of major movements in aesthetic theory on the theory and practice of rhetorical communication. Prerequisite: 210, 215, or an equivalent course in interpretation or criticism.

**COMM ST 380-0 Political Communication** Nature and functions of communication within established political institutions; decision-making strategies, deliberative discourse, and electoral campaigns; field study of advocacy and interest groups. Prerequisite: 205, 210, or 270.

**COMM ST 381-0 Classroom Communication Behavior** The classroom as a communication system; verbal and nonverbal patterns of interaction. Systematic analysis of teacher-student behavior according to interpersonal and group processes.

COMM ST 382-0 Family Communication Behavior

An overview of the family as a communication system. Intergenerational interaction patterns, intimacy and conflict patterns, decision making, environmental and cultural factors, and enrichment efforts. A wide range of family types and research methods are considered.

**COMM ST 383-0 Satellites** Historical development and contemporary issues regarding satellites. Government, research, military, and corporate uses of satellites and the relationships between satellites and telecommunications,

geostrategic issues, information society, cyberspace, and economic development.

**COMM ST 385-0 Mass Media Economics** Economic framework for analyzing factors influencing economic organization of media industries and behavior of media firms. Framework applied to policy issues.

**COMM ST 389-0 Practicum in Mass Communication Research** Collaboration with a faculty member on design and execution of a communication research project. Students learn how to complete a research project and write a report. Prerequisite: 201.

**COMM ST 391-0 Ethical Issues in Communication** Ethical problems in public, group, and interpersonal communication; criteria for their resolution.

**COMM ST 392-0 Intercultural Communication** Designed to integrate theory and practice in heightening student's awareness of the impact of culture on one's perception, beliefs, meanings, and verbal/nonverbal communication.

## **COMM ST 393-0 Field Study in Communication** Enrollment only by petition in advance. Arrangements for winter quarter must be made by November 1 and for spring quarter by February 1.

**COMM ST 394-0 Gender and Communication** Designed to integrate theory and practice in heightening awareness of the importance of gender as a communication variable. **COMM ST 395-0 Topics in Communication Studies** 

Reading, research, and discussion in areas of significance. Topics vary.

**COMM ST 398-0 Undergraduate Seminar** Student- or faculty-initiated seminars to consider special topics. Credit for 398 may be earned more than once. No more than two units of such credit may be applied toward fulfillment of the major requirements.

**COMM ST 399-0 Independent Study** Enrollment only by petition in advance.

## **Performance Studies**

The Department of Performance Studies integrates artistic and analytical approaches to a wide range of performance texts, events, and processes. The courses explore an interdisciplinary range of literary, cultural, and personal texts in performance. The department has particular strengths in the study of literature through solo performance; the ensemble adaptation and staging of poetic, narrative, and nonfictional texts; intercultural performance; performance art; cultural studies and the ethnography of performance; performance theory and criticism. Internships and field study for performance studies majors extend and deepen their classroom work with experiential learning. Extracurricular work provides students with a variety of opportunities to perform, adapt, and direct, enabling their creative work to reach an audience outside the classroom.

Performance studies majors have been successful in many professions that require intelligence and imagination

as well as critical and creative skills. In addition to pursuing careers in professional theatre and arts development, many graduates teach literature, theatre, humanities, and performance studies. Majors have found performance studies an excellent preparation for law school and complementary to their interests in creative writing, communication, media, anthropology, dance, literature, or social work. Performance studies can be thought of as a major that bridges artistic expression and conceptual analysis, theory and practice. Performance, in its manifold forms, is the subject and the method of study.

## **Requirements for a Major in Performance Studies**

- Introductory courses: 1 quarter of either GEN SPCH 101 or 102; GEN SPCH 103
- 200-level courses: a minimum of 4 courses in speech, including the following courses in the department: 216, 224, and 1 unit of 210-1, 210-2, or 210-3
- Production courses in theatre: 2 courses selected from THEATRE 140-1,2, 240-1,2,3, 241-1,2,3, 249, 354-1,2,3 (1 quarter only), 355, 363; or 1 course selected from preceding courses and one registration for 119; or 2 registrations for 119
- An additional 10 courses in speech, at least 6 of which must be in the department at the 300 level; not more than 1 unit of 399 Independent Study or 331 Field Study may apply toward the required 6 300-level performance studies courses, and not more than 2 units of 399 Independent Study or 1 unit of 331 Field Study may apply toward the required total of 10 courses in speech
- 6 courses at the 200 level or above outside speech, including at least 3 300-level courses in literature; if they apply, courses taken to meet the distribution requirement may be used to satisfy this requirement
- · Electives in speech and other areas

**Courses Primarily for Freshmen and Sophomores GEN SPCH 103-0 Analysis and Performance of Literature** See Introductory and Related Courses.

**PERF ST 210-1 Performance of Poetry** Introduction to the analysis and performance of poetry. Prerequisite: GEN SPCH 103 or equivalent.

**PERF ST 210-2 Performance of Narrative Fiction** Introduction to the study of narrative performance. Prerequisite: GEN SPCH 103 or equivalent.

**PERF ST 210-3 Performance of Drama** Introduction to drama and theatricality from a performance studies perspective. Prerequisite: GEN SPCH 103 or equivalent.

**PERF ST 216-0 Performance and Culture** Performative bases of culture; ritual, festival, and ceremony.

**PERF ST 224-0 Adapting Narrative for Group Performance** Introduction to theories and methods of adapting narrative for the stage, with special emphasis on chamber theatre. Prerequisite: GEN SPCH 103 or equivalent.

# Courses Primarily for Juniors, Seniors, and Graduates

Unless otherwise indicated, one 200-level course in the department is a prerequisite.

**PERF ST 307-1,2 Studies in Gender and Performance** Recent research on the social and political background of gender, particularly women's access to performative expressions. **1.** Women in the interstices of culture; evidence of women's performance traditions in paratheatrical cultural practices. **2.** Feminist theories of performance; feminist critiques of performance and production in the contemporary context. A third course in this series (THEATRE 307) is offered by the theatre department.

**PERF ST 308-0 Performing Modern and Contemporary Poetry** Use of performance in the analysis and criticism of modern and contemporary poetry.

# PERF ST 309-1,2,3 Performance of Black LiteratureExploration and performance of contemporary literatureby black writers in three major genres. 1. Drama. 2. Novel.3. Poetry.

**PERF ST 311-0 Performance in Everyday Life** Conceptual view of human beings as actors. Dramatism and the perspective of life as theatre.

**PERF ST 315-0 Nonfiction Studies** Exploration of the dramatic impulse in nonfiction texts. Emphasis on autobiographical one-person shows.

**PERF ST 316-0 Folklore and Oral Traditions** Genres of oral literature and an introduction to the methods and aims of folklore research. The nature of verbal art as performance and the importance of cultural context.

**PERF ST 318-0 Shakespeare: Performance and Criticism** Use of performance in the analysis and criticism of selected plays by Shakespeare.

**PERF ST 321-0 Performing the American '50s** Use of performance in the analysis and criticism of selected postwar American literature.

**PERF ST 322-0 Performing the Psychological Novel** Use of performance in the analysis and criticism of selected 19th- and 20th-century novels.

**PERF ST 324-1,2 Presentational Aesthetics 1.** Theatrical convention, presentational mode, and conscious artifice in the performance of dramatic literature, poetry, and non-fiction. **2.** Theory and practice of chamber theatre, its conventions and presentational modes; adaptation, staging, and performance of prose fiction. Choice of performer's or director's perspective. Prerequisite: 224.

**PERF ST 326-1,2 Performance Art 1.** History, development, and theories of performance art as a live-art genre from the modernist avant-garde to contemporary crosscultural forms. Media in all forms, with emphasis on performance process and audience relationship. **2.** Further theoretical and laboratory exploration of compositional processes and political strategies of performance, media, and event/audience contexts.

PERF ST 327-0 Field Methods in Performance Studies

Theory and practice of fieldwork on performance; practical fieldwork experience.

**PERF ST 328-0 Studies in James Joyce** Primary emphasis on extensive critical study and performance of Joyce's *Ulysses*, resulting in either a lecture-performance, a recital, or a research paper.

## PERF ST 329-0 Performing Individual Poetic Styles

Content varies. Major poems of a significant writer or writers, permitting in-depth encounter with the writer, cultural context, and performance-related issues.

**PERF ST 330-0 Topics in Performance Studies** Readings, discussion, and creative work in performance studies research and artistic practice. Topics vary. May be repeated for credit.

## **PERF ST 331-0 Field Study/Internship in Performance Studies** Intensive participation in off-campus production and/or field research experience. Departmental approval required.

**PERF ST 332-0 Urban Festivity** Ethnographic study of festivals, parades, exhibitions, civic celebrations, and other genres of urban cultural performance. Multiethnic expressions of Chicago identity. Field research methods.

**PERF ST 399-0 Independent Study** Prerequisite: consent of associate dean after submission of petition.

## Radio/Television/Film

The Department of Radio/Television/Film offers education in the history, theory, and production of media. Broadbased and interdisciplinary in orientation, the department offers a range of perspectives on media forms from cinema to broadcast television to alternative media to emerging technologies. Courses emphasize that media are social and cultural practices in dialogue with the broader context of the humanities. The department is dedicated to integrating theory and practice, creating intersections with other disciplines, and fostering cutting-edge media production. Originality, critical analysis, and vision are valued in both scholarly research and creative work. The department's goal is to educate students and citizens to critically interpret contemporary media, envision alternative structures in theory and practice, and reinvent the media of the future.

Production facilities include 16mm film equipment, sound stage, and editing; field video and multiple-camera television studio facilities; linear and nonlinear video editing; advanced audio postproduction; and state-of-theart computer graphics. Students operate the 7200-watt FM radio station WNUR, which serves the Chicago area and also broadcasts on the Internet. The School of Speech funds four active student-run cocurricular production groups and offers juniors and seniors numerous opportunities for internships at Chicago-area television and radio station and production companies. Frequent guest lectures are offered by alumni with careers in media and other wellknown professionals.

## **Requirements for a Major in Radio/Television/Film**

- Introductory courses: 180; a minimum of 3 courses at the 100 or 200 level in speech outside the department
- 200-level courses: 220, 230, 280; 280 is prerequisite for all 300-level production and writing courses
- An additional 8 courses in speech at the 300 and 400 levels, including at least 6 courses in the department at the 300 and 400 levels; not more than 1 unit of 349 Internship in Radio/Television/Film and 399 Independent Study may be applied toward the 6 courses required in the department; the remaining internship and 399 units count as elective credits
- 6 courses at the 200 level or above outside speech, including at least 3 courses at the 300 level or above; courses taken to meet the distribution requirement may be used to fulfill this requirement
- Language requirement: proficiency in a modern foreign language equal to four quarters of college study; proficiency may be established by placement exam or by completion of the fourth quarter
- Electives in speech and other areas

## Courses Primarily for Freshmen and Sophomores R/TV/F 180-0 Media Construction I: Media Literacy

Image construction and manipulation; image sequencing; sound and sound-image relations; basics of Web design. Prerequisite for 280. Required for majors.

**R/TV/F 202-0 Introduction to Popular Culture: The Mass Media** Cultural meanings of narrative and commercial forms in radio, television, and film. Historical and contemporary theories of popular culture.

**R/TV/F 215-0 Media Literacy** Production/criticism for nonmajors; new radio/television/film majors may enroll. Grammar of still and moving images: photography, television, film, radio, computer graphics.

**R/TV/F 220-0 Analyzing Media Texts** Introduction to the study of the moving image. Basic elements of style across media including film, television, and interactive media. Focus on close analysis of texts to find significance. Pre-requisite for upper-level courses in the department. Required for majors.

**R/TV/F 230-0 Understanding Media Contexts** Media industries as social and cultural forces; economic and political dimensions of the global media. Prerequisite for all 300-level courses in the department. Required for majors.

**R/TV/F 260-0 Foundations of Screenwriting** Introduction to writing for the screen (film, television, and/or computer). Structure, character, dialogue, format, voice, scope, pace, context. Lecture/workshop. Prerequisite for upper-level writing courses in the department.

## COMM ST 275-0 Persuasive Images: Rhetoric of Contemporary Culture See Communication Studies.

**R/TV/F 280-0 Media Construction II: Sight and Sound** Foundation course in single-camera production, with emphasis on expressive possibilities of lighting. Prerequisites: 180, 220. Prerequisite to 300-level production courses; required for majors.

**R/TV/F 298-0 Studies in Media Topics** Theoretical or practical or both; emphasis on evolving trends.

# Courses Primarily for Juniors, Seniors, and Graduates

**R/TV/F 301-0 Broadcast News** Survey of existing research and critical analysis of the process, content, impact, and utilization of broadcast news.

**R/TV/F 310-0 History of Broadcasting** Global evolution of radio and television, with events in United States as a central historical factor; programming and audiences, trends, cultural influences, issues. Survey of literature and research.

**R/TV/F 312-1,2 History of Film** International survey of motion pictures as a distinctive medium of expression from its prehistory to the present.

**R/TV/F 313-1 Documentary Film: History and Criticism** Survey of the schools, styles, and purposes of documentary film as a unique form of artistic expression and sociopolitical persuasion.

**R/TV/F 313-2 Documentary Film and Video** Contemporary work and issues in documentary film and video.

**R/TV/F 321-0 Radio/Television/Film Authorship** Idea of authorship in the media and an examination of different uses of author theory related to the work of particular artists.

**R/TV/F 322-0 Radio/Television/Film Genre** Concept of genre in the media, with reference to popular American forms.

**R/TV/F 323-1 Experimental Film: History and Criticism** Films and theories of experimentalists since the 1920s; contemporary underground movement.

**R/TV/F 323-2 Experimental Film and Video** Contemporary work in experimental film and video.

**R/TV/F 325-0 Feminism and Film/Video** Introduction to feminist film theory, the feminist critique of mainstream cinema, and film and video work by women offering alternatives to the mainstream.

**R/TV/F 326-0 Mass Media Criticism** Contemporary critical methods applied to mass communication media. Critical literature supplemented by written analyses of selected films, television programs, and other appropriate material.

**R/TV/F 330-0 Electronic Media Management** Organization and management of the television station and other electronic media organizations and facilities; functions and interrelationships of various departments. **R/TV/F 331-0 Regulation of Broadcasting** Government regulation and industry self-regulation; historical perspective and examination of current issues.

**R/TV/F 333-0 Cable Communications** Legal, technical, and programming aspects of cable and satellite communications. Services offered by existing systems and the complexities of developing systems.

**R/TV/F 334-0 Television in Education** Uses, potentialities, current developments in educational media, including non-commercial educational media stations and media in the schools.

**R/TV/F 341-0 Technological Innovations** How technology develops and is assimilated into mass media.

**R/TV/F 342-0 Program Planning and Programming** Programming the broadcast station in relation to audiences, markets, coverage, station policies, facilities.

**R/TV/F 344-0 Program Distribution and Promotion** Analysis of network program distribution, syndication, cable distribution, and how series are promoted; how a station programmer makes decisions.

**R/TV/F 345-0 Film As Business** American film industry's structure, policies, and relations with foreign governments and other segments of the entertainment business, including financing, distribution, and exhibition.

**R/TV/F 349-1,2 Internship in Radio/Television/Film** (1–3 units) Selected students work in production departments of radio and television stations and film studios. Guided research and reading.

**R/TV/F 351-0 National Cinema** Historical aspects of cinema in a culture outside the United States or a social/ cultural/intellectual movement within the general evolution of cinema.

**R/TV/F 353-0 National Mass Media** The problem of creating a distinct national cultural identity through mass media; specific nations as case studies.

**COMM ST 355-0 Audience Analysis** See Communication Studies.

**R/TV/F 360-0 Topics in Screenwriting** Various approaches to screenwriting, emphasizing different modes and genres such as the short film, the feature film, screenplays based on preexisting material, the teen film, interactive computer scenarios. May be taken twice for credit, depending on the change in topic. Prerequisite: 260.

**COMM ST 377-0 Marketing Popular Culture** See Communication Studies.

**R/TV/F 379-0 Topics in Film/Video/Audio Production** Indepth study and practice of one area of film, video, or television. May be taken more than once for credit, depending on changes in topic. Prerequisites: 380 and 381.

**R/TV/F 380-0 Film Production** Techniques and technologies of 16mm filmmaking from initial conception to completed motion picture. Lecture/laboratory.

**R/TV/F 381-0 Video Production** Techniques and technologies of professional video; single-camera shooting and multisource editing. Lecture/laboratory.

**R/TV/F 383-0 Radio/Audio Production** Techniques and technologies of audio production, emphasizing location recording. Survey of techniques used for film, video, experimental audio, and radio production. Postproduction includes work with a digital audio workstation. Lecture/laboratory.

**R/TV/F 385-0 Integrated Media Arts** Introduction to theory and practice of media using microcomputers. For nonmajors; an elective in the Integrated Arts Program.

**COMM ST 385-0 Mass Media Economics** See Communication Studies.

**R/TV/F 391-0 Television Studio Directing** Directing, crewing, and technical skills for multiple camera live-on-tape television production in narrative and non-narrative genres; preproduction, directorial communication, blocking, pacing, visualization. Prerequisite: 380 or 381.

**R/TV/F 392-0 Documentary Production** Techniques for film and video, emphasizing preproduction planning, documentary techniques, and ethics. Prerequisites: 313-1 and 380 or 381.

**R/TV/F 393-0 Computer Animation** Study and practice of two-dimensional computer graphics and animation.

**R/TV/F 394-0 Experimental Film and Video Production** Production experience in the making of art film or video; tapes, films, or installations that work outside established genres. Prerequisites: 323-2 and 380 or 381.

**R/TV/F 398-0 Symposium: Issues in Radio/Television/ Film** Special issues and topics in the analysis of radio, television, film, and popular culture.

**R/TV/F 399-0 Independent Study** Prerequisite: consent of associate dean after submission of petition.

## Theatre

Students who major in theatre at Northwestern combine a liberal arts education with intensive training in the theories and arts of the theatre. At the heart of the theatre program lies the idea that the best theatre artist is the one who combines a broad knowledge of the literature and theory of the field with highly developed skills in its practice. With the aid of an adviser, theatre majors select courses from three general areas of theatrical training: acting/directing/dance, design/technical, and history/literature/criticism. On completion of the introductory courses, students proceed to more intensive and more highly specialized courses, continually supplementing scholarly training with the discipline and challenge of performance.

The principal laboratories for student work are the Theatre and Interpretation Center presentations during the academic year and the Summer Theatre Festival. Both offer subscription seasons to a large and demanding audience. The Theatre and Interpretation Center mounts a series of plays, usually three each quarter, during the regular term. Children's Theatre productions are offered as well during the academic year and in the summer. Many plays, including studio theatre productions, are produced each quarter — directed, designed, and performed by students.

A major in dance is also available within the Department of Theatre. The dance major prepares students for further advanced academic work or apprentice-level positions in professional dance. The major's comprehensive curriculum emphasizes the study of dance as well as the act of dancing. Students are prepared for lifetime involvement in dance and for continued development intellectually, artistically, and professionally within the dance world. The program provides students with opportunities to write about, research, and analyze the field and to study choreography and technique. The major presents a well-integrated view of dance while also providing sound technical training. The students are exposed to a variety of forms, with modern dance and jazz as the foundation techniques. The department supports the Dance Ensemble and DanceWorks as well as self-produced dance concerts.

## **Requirements for a Major in Theatre**

Introductory courses

- THEATRE 140-1,2 (two quarters); 2 courses from the following: GEN SPCH 101, 102, 103, 110
- Noncredit dance or physical education courses: 3 quarters from a selected list
- 200- and 300-level courses: a minimum of 5 courses at the 200 level and 5 courses at the 300 level or above in theatre, with courses from each of the following groups:

## **Performance** (at least 2 courses)

- THEATRE 210 Training the Actor's Voice
- THEATRE 243-1,2,3 Acting I: Principles of
- Characterization THEATRE 339 Advanced Acting (see Graduate School catalog)
- THEATRE 340-1,2 Stage Directing
- THEATRE 341-1,2,3 Acting II: Analysis and Performance
- THEATRE 347 Children's Theatre
- THEATRE 348-1,2 Creative Drama
- THEATRE 359 Directing for the Open Stage (see Graduate School catalog)
- THEATRE 442 Theatre Practice: Storytelling (see Graduate School catalog)
- THEATRE 442 Theatre Practice: Children's Theatre Tour (see Graduate School catalog)
- Design/Technology (at least 2 courses)

## THEATRE 240-1,2,3 Stagecraft

- THEATRE 241-1,2,3 Design Process
- THEATRE 242 Stage Makeup
- THEATRE 249 Stage Management
- THEATRE 342-1,2 Stage Lighting II
- THEATRE 343-1,2 Scene Design II

- THEATRE 344-1,2 Costume Design II
- THEATRE 353 Topics in Stagecraft
- THEATRE 354-1,2,3 History of Costume and Decor (1 unit only)
- THEATRE 355 Scene Painting
- THEATRE 361 Makeup, Masks, and Wigs
- THEATRE 363 Theatre Sound
- History, Literature, and Criticism (at least 3 courses)
- 2 courses from one of the following sequences:
- THEATRE 244-1,2 Development of Contemporary Theatre
- THEATRE 345-1,2,3 History of Western Theatrical Practice
- COMP LIT 362-1,2,3 Modern Drama
- THEATRE 367 History of the Lyric Theatre; DANCE 230 History of the Dance; DANCE 330 Dance Criticism
- THEATRE 365-1,2 American Theatre and Drama; AF AM ST 259 Introduction to African-American Drama PERF ST 307-1,2 Studies in Gender and Performance; THEATRE 307 Studies in Gender and Performance ENGLISH 334-1,2 Shakespeare; ENGLISH 339 Special Topics in Shakespeare
- 1 additional course from sequences above or from the following: THEATRE 366, 368; DANCE 335; CLASSICS 345, 348; COMP LIT 203, 312, 365; ENGLISH 312, 332, 342; SLAVIC 318, 369; SPANISH 342
- Courses outside speech: 6 courses at the 200 level or above, including at least 3 courses at the 300 level or above (courses taken to meet the distribution requirement may be used)
- Electives: note the School of Speech 18-unit requirement (see General Requirements)

## **Requirements for a Major in Dance**

- Introductory courses: DANCE 130-1,2,3; THEATRE 119 (two quarters, no credit); 1 course from the following: GEN SPCH 101, 102, 103, 108, 110
- 200- or 300-level speech courses: 3 courses
- At least 1 yearlong for-credit technique course each year, from the following: 240-1,2,3; 242-1,2,3; 244-1,2,3
- At least 8 courses chosen from the following categories, with a minimum of 3 courses from each category:

## Performance

DANCE 133 Movement for the Stage DANCE 232 Dance Composition DANCE 233 Choreography for the Musical Stage DANCE 332 Improvisation for Dance, Music, and Theatre DANCE 333 Dance and Music: Studies in Collaboration DANCE 334 Advanced Choreographic Study DANCE 442 Studies in Dance

## History, Theory, and Criticism

DANCE 230 History of the Dance DANCE 231 Period Dance and Historical Movement Styles DANCE 330 Dance Criticism DANCE 335 Special Topics in Dance Research (methods or history topics) THEATRE 367 History of the Lyric Theatre Weinberg dance history/theory courses **Professional Studies** 

DANCE 331 Summer Dance Institute DANCE 335 Special Topics in Dance Research (dance science/medicine, design for dance) DANCE 336 Labanotation, Elementary Level DANCE 337 Dance and Expressive Arts Therapies DANCE 342 Studies in Dance DANCE 371 Dance in Education THEATRE 380 Internship in Theatre Practice

## Theatre

## **Courses Primarily for Freshmen and Sophomores**

**THEATRE 119-0 Production Laboratory** Registration for students fulfilling production requirements.

**THEATRE 140-1,2 Theatre in Context 1.** Combination of lecture, discussion, workshop, assignments, production lab, and play viewing. Text analysis taught with a view toward stage production. Opportunities for students to try different roles (acting, directing, technical). **2.** Seminar in three sections emphasizing theatre history, literature, and criticism; research; and writing skills.

**THEATRE 143-0 Acting: Basic Techniques** For nonmajors. Sensory and spatial awareness, concentration, relaxation, basic stage action. Prerequisite: consent of instructor.

**THEATRE 210-0 Training the Actor's Voice** Three actions — structural, tonal, and consonant. Individual practice sessions. Script analysis and discovery of subtext through use of actions. Prerequisites: 140-1,2 or equivalent.

**THEATRE 240-1,2,3 Stagecraft** Craft and technology used in mounting a theatrical production. Participation in department productions. **1.** Lighting: mechanics, physics, and practices of the stage lighting technician. **2.** Scenery: construction, rigging, and handling. **3.** Costumes: sewing techniques, fitting, tools, and fabrics. Prerequisite: sophomore standing or consent of instructor.

THEATRE 241-1,2,3 Design Process Responsibilities of the theatrical designer, from initial reading of the script to production realization. Participation in department productions. 1. Scene design I. 2. Costume design I.
3. Lighting design I. Prerequisite: sophomore standing or consent of instructor.

**THEATRE 242-0 Stage Makeup** Theory and practice of stage makeup. Lecture/laboratory. Prerequisite: consent of instructor.

**THEATRE 243-1,2, 3 Acting I: Principles of Characterization 1.** Basic concepts. **2.** Characterization in scene study. **3.** Ensemble and advanced scene study. Prerequisites: 140-1,2 or equivalent; consent of instructor.

### THEATRE 244-1,2 Development of Contemporary Theatre

Critical study of major dramatists, theories, and production styles. **1.** 1870–1920. **2.** 1920–present.

**THEATRE 249-0 Stage Management** Organization and coordination of the theatrical production; role of the stage manager.

**THEATRE 253-0 Mime** Art of mime; theory and practice. Physical and mental conditioning of the performer, progressing to intensive work in performance concepts. Summer only.

# Courses Primarily for Juniors, Seniors, and Graduates

Unless otherwise noted, these courses are open only to students who have completed the departmental 200-level requirements or their equivalents.

**THEATRE 307-0 Studies in Gender and Performance** Exploration of recent research on the social and political background of gender, particularly women's access to performative expressions. Historical aesthetics: changing debates on women's participation in the public theatre and the significance of the body in performance. PERF ST 307-1,2 are the first two courses in this series.

**THEATRE 310-0 Advanced Voice/Styles** Advanced vocal techniques of the stage actor; dramatic language analysis; scanning and speaking Shakespearean verse. Prerequisites: GEN SPCH 110 or equivalent and consent of instructor.

**THEATRE 311-0 Dialects for the Stage** Dialects most frequently used by the American stage actor; systematic approach to dialect acquisition. Prerequisites: GEN SPCH 110 or equivalent; consent of instructor.

**THEATRE 340-1,2 Stage Directing 1.** Staging fundamentals: blocking, movement, business, tempo, script selection and analysis, casting, and rehearsal planning. **2.** Special problems: exposition, suspense, surprise, marking of climaxes, and the creation of mood. Prerequisite: consent of instructor.

**THEATRE 341-1,2,3 Acting II: Analysis and Performance** Theory, principles, and techniques of interpretation of drama from the point of view of the actor. **1.** Greek drama. **2.** Elizabethan drama. **3.** Contemporary drama. Prerequisite: consent of instructor.

**THEATRE 342-1,2 Stage Lighting II** Lighting methodologies and elements of lighting design, composition, and orchestration. Electrical practice and instrumentation. Design problems and their graphic notation. Light plots, hookups, and cueing. Advanced problems in lighting design and execution of nontraditional forms. Control and color. Participation in departmental productions. Prerequisite: 240-1, 241-3, or consent of instructor.

**THEATRE 343-1,2 Scene Design II** The practice of theatrical set design, including composition, modes of presentation, elements of design, historical and contemporary source material. **1.** Formulation of concept and image-

based designs. **2.** Complex design problems. Participation in departmental productions. Prerequisite: consent of instructor.

**THEATRE 344-1,2 Costume Design II** Design elements and principles; color, form, line, and fabric. Personal technique and theatrical style. Developing large projects and sustaining a style. Participation in departmental productions. Prerequisites: 240-3 and 241-2.

THEATRE 345-1,2,3 History of Western TheatricalPractice History and theory of theatre and drama.1. Theatre and culture in the classical period. 2. Theatre and culture in the Middle Ages and Renaissance.

3. Cultural crosscurrents from the Restoration.

**THEATRE 346-1,2 Playwriting** Fundamental techniques of playwriting. **1.** Beginning projects. **2.** Advanced projects. Prerequisite: consent of instructor; 346-1 prerequisite for 346-2.

**THEATRE 347-0 Children's Theatre** Selection, direction, and production of plays for children.

**THEATRE 348-1,2 Creative Drama** Principles and practices of improvised drama as a teaching method and a means of learning for the elementary school child. **1**. Basic theory through reading, discussion, film, observation, and team-teaching project. **2**. Comparison of philosophies and practices of creative drama teachers in England and the United States. Culminates in teaching project. Prerequisite: consent of instructor; 348-1 prerequisite for 348-2.

### THEATRE 349-1,2,3 Acting III: Problems in Style

Advanced problems in acting theories and styles. **1.** Methods of comic technique. **2.** Contemporary drama. **3.** Special projects in scene study. Prerequisite: consent of instructor.

THEATRE 350-1,2,3 Problems in Advanced Technical

**Planning** Planning, organization, and materials in mounting productions based on contemporary theatrical practice. **1.** Engineering drawing techniques; skill development for technicians and designers. **2.** Coordination of personnel and material in production. **3.** Materials, methods, and equipment employed in contemporary scenic construction. Participation in departmental productions. Prerequisite: junior standing or consent of instructor.

**THEATRE 351-0 Staging of Contemporary Drama** Production problems peculiar to directing of plays for contemporary theatre. Prerequisite: 340-1,2 or equivalent.

**THEATRE 352-1,2 Music Theatre Techniques** Various performance styles of musical theatre. **1.** Early works from the turn of the century through the classical musicals of Rodgers and Hammerstein. **2.** Integrated musicals through the development of concept and rock musicals. Pre-requisites: junior standing; 243-1,2,3.

**THEATRE 353-0 Topics in Stagecraft** Seminars with guest or resident faculty on topics in stagecraft.

**THEATRE 354-1,2,3 History of Costume and Decor** History of costume, accessory, architecture, furniture, and ornamentation. 1. Ancient times to Renaissance.2. Renaissance to 19th century. 3. 19th century.Participation in departmental productions. Prerequisite: junior standing or consent of instructor.

**THEATRE 355-0 Scene Painting** Advanced scenic artists' techniques and procedures. Color use for the stage. Approaches established by professional scenic artists. Lab fee; students supply own brushes. Prerequisite: consent of instructor.

**THEATRE 356-1,2,3 Graphic Arts for the Stage Designer** Projects in the use of calligraphy, color, and styles for the theatre artist. **1.** Drawing and painting. **2.** Color, calligraphy, model making; art techniques and practical application of color and material theories. **3.** Scene painting; traditional and contemporary theory. Participation in departmental productions. Prerequisite: junior standing or consent of instructor.

**THEATRE 357-1,2 Freehand Drawing for the Stage Designer** Drawing for scenery, costume, and lighting designers; principles of drawing and composition using a variety of drawing materials. Lecture and studio. Prerequisite: consent of instructor.

**THEATRE 361-0 Makeup, Masks, and Wigs** Design principles and construction methods used in creating visual accessories to costume design. Participation in departmental productions. Prerequisite: 241-2 or equivalent.

**THEATRE 362-0 20th-Century Stage Design** Major stylistic developments in 20th-century scenography and scene, costume, and lighting design. Emphasis on the American artist in context of the major influences that have shaped the craft.

**THEATRE 363-0 Theatre Sound** Planning and execution of sound for the theatrical production; design of the actor's acoustical environment. Prerequisite: junior standing or consent of instructor.

**THEATRE 364-0 Period Pattern Drafting and Draping** Techniques of flat pattern drafting and advanced construction required for creating historical garment patterns for the stage. Participation in departmental productions. Prerequisite: junior standing or consent of instructor.

**THEATRE 365-1,2 American Theatre and Drama** Survey of American theatre and drama that seeks to locate plays, performances such as pageants and blackface minstrelsy, and theatre companies within their original contexts and to examine their continuing relevance to articulations of national identity. 1. Beginnings through the 1930s. 2. The 1950s to the present.

**THEATRE 366-0 Studies in Individual Dramatic Styles** Intensive reading and discussion of selected works of major dramatists; the work's unique character, imparted by the dramatist's personal style. Prerequisites: two units of either 244 or 345. **THEATRE 367-0 History of the Lyric Theatre** Three-part course, covering the major movements in the histories of dance, opera, and musical comedy. Examination of artists and their works.

**THEATRE 368-0 African Theatre and Drama** Theatrical and dramaturgic practices outside Western canon; reinterpretations of that canon by African playwrights. Major practices in African theatre and drama, with focus on Nigerian and South African artists. Festival practices, traveling and popular theatres, drama in English, development of appropriate terminology. Prerequisite: 345-1, 2, or 3 or AF AM ST 259 or consent of instructor.

## **THEATRE 373-0 Computer Graphics for the Theatre Artist** Computer graphics for the stage designer. Participation in center productions. Investigation of available software programs and strategies for use in the theatre.

Lecture/laboratory. **THEATRE 374-0 Text Analysis for Theatrical Production** Seminar in analysis of dramatic and nondramatic texts as it relates to the problems of realized theatrical production.

**THEATRE 376-0 Participation Theatre for Young Audiences** Participation and story theatre, incorporating improvisation into the structure of a scripted play for the child audience. Prerequisite: consent of instructor.

**THEATRE 380-0 Internship in Theatre Practice** (3 units for undergraduates; 2 units for graduates) Full-time participation in production and/or management activities in a theatre company. Prerequisite: consent of department.

**THEATRE 399-0 Independent Study** Prerequisite: consent of associate dean after submission of petition.

## Dance

**Courses Primarily for Freshmen and Sophomores** 

**DANCE 130-1,2,3 Introduction to the Dance Experience** Technique, improvisation, lecture, and discussion on dance history and cultural studies. **1.** Movement analysis and theories of dance **2.** Anatomy and kinesiology. **3.** World dance. Prerequisite: consent of instructor.

**DANCE 133-0 Movement for the Stage** Movement/body awareness. Improvisational techniques using time, space, weight, and effort as the instrument of expression.

**DANCE 230-0 History of the Dance** Movement concepts in the major developmental periods of Western ballet and modern dance.

**DANCE 231-0 Period Dance and Historical Movement Styles** Body carriage, use of gesture, and dance of the preclassic period. Practical and theoretical understanding of movement styles of the Middle Ages and Renaissance and Baroque periods.

**DANCE 232-0 Dance Composition** The choreographic process. Fundamental choreographic elements: time, space, shape, form, dynamics, and design.

## DANCE 233-0 Choreography for the Musical Stage

Setting movement/dance for vocalists and actors. Teaching choreography to nondancers and working with large numbers (chorus) on stage.

## DANCE 240-1,2,3 Studies in Ballet DANCE 242-1,2,3 Studies in Modern DANCE 244-1,2,3 Studies in Jazz

## Courses Primarily for Juniors, Seniors, and Graduates

Unless otherwise noted, these courses are open only to students who have completed the departmental 200-level requirements or their equivalents.

**DANCE 330-0 Dance Criticism** Critical and theoretical thought of writers on Western theatrical dance.

**DANCE 331-0 Summer Dance Institute** Choreography workshop exploring various dance forms with guest artists. Summer only.

## **DANCE 332-0 Improvisation for Dance, Music, and Theatre** Improvisation as a source for performance and composition. Interrelationships of the performing arts. For musicians, actors, and dancers to investigate new dimensions of their art. Prerequisite: consent of instructor.

**DANCE 333-0 Dance and Music: Studies in Collaboration** Music and dance collaborations from historical and theoretical perspectives. Seminar, practicum.

**DANCE 334-0 Advanced Choreographic Study** Lecturelaboratory investigation of advanced choreographic concepts; abstraction, style, use of music, group work, humor in dance. Prerequisite: 232 or consent of instructor.

**DANCE 335-0 Special Topics in Dance Research** Research methodologies, dance scholarship, criticism, historical reconstruction. Critical issues and contemporary problems. Content varies. Prerequisite: consent of instructor.

**DANCE 336-0 Labanotation, Elementary Level** Scientific system of notating movement; observation, analysis, accurate recording.

**DANCE 337-0 Dance and Expressive Arts Therapies** Dance and the creative arts therapies in the treatment of the disabled and emotionally ill. Symbolic meaning, group dynamics, and the language of movement as it relates to personality, body image, and expression. Prerequisite: consent of instructor.

#### DANCE 342-0 Studies in Dance

**DANCE 371-0 Dance in Education** Organizing and teaching dance for children and adolescents. Creative play, movement exploration, acquisition of basic motor skills. Lecture, laboratory, field experiences.

**DANCE 399-0 Independent Study** Prerequisite: consent of associate dean after submission of petition.

DANCE 442-0 Studies in Dance

## **Other Undergraduate Programs**

## Art and Technology Program

Undergraduates who wish to focus their interest in art and technology may earn a minor in art and technology while simultaneously pursuing a departmental major in the School of Music, Department of Art Theory and Practice, Department of Computer Science, or Department of Radio/Television/Film. Exceptions may be made for students from other departments with adequate art and/or technology backgrounds.

## Minor in Art and Technology

Students qualify for the minor in art and technology by satisfactorily completing seven course units: the three core courses plus a minimum of four courses not double-counted in their majors. These four electives, chosen in consultation with an adviser in the Center for Art and Technology, may be drawn from the list below or may be other courses that have substantial content in art and technology. At least two of the electives must be at the 300 level or above.

Core courses: 379 and 398-1,2

**Elective courses:** ART 124; ART 125; ART 240; ART 250-1,2; ART 340; ART 342; ART 350; ART 352; ART 372; ART 390; COMP SCI 110; COMP SCI 395; MUS TECH 259; MUS TECH 325; MUS TECH 326; MUS TECH 327; MUS TECH 337; MUS TECH 338; MUS TECH 339; MUS TECH 340; MUS TECH 341; MUS TECH 342; R/TV/F 180; R/TV/F 280; R/TV/F 379; R/TV/F 393; THEATRE 363; THEATRE 373

## Courses

**R/TV/F 379-0 Topics in Film/Video/Audio Production: Art and Technology Project** A faculty-led creative and research project with students as collaborators. The class will produce and exhibit a work of art centrally involving technology in its creation and display and will work with the Block Museum to make the work accessible to the public.

**R/TV/F 398-0 Symposium: History of Art and Technology** The influence of new technologies on 20th-century art. Issues explored include the structure of synthetic pictorial spaces, creating art in a global scale, responding to images of pure light, the aesthetics of motion, behavior in virtual environments, and the experience of interactive artworks.

## R/TV/F 398-0 Symposium: Art and Technology

**Colloquium** A seminar providing a forum for students, faculty, and visiting artists to present technical or aesthetic research topics of relevance to contemporary technological

art practice. Topics will vary each quarter the course is offered and may range from critical theory to technical presentations to reviews of participants' current work. Must be repeated three times to earn one credit. Prerequisite: junior standing or permission of instructor.

## **Integrated Arts Program**

The interschool Integrated Arts Program offers courses that explore the creative process from the perspective of the artist in the disciplines of theater, visual arts, music, dance, and media arts. Students participate in lecture/ discussion and studio courses crossing the boundaries of the traditional arts and involving collaboration between different art forms. They work in this program with a faculty of artists and scholars from the Judd A. and Marjorie Weinberg College of Arts and Sciences, the School of Music, and the School of Speech.

The curriculum also features courses in different disciplines that take art as their subject, e.g., sociology and the arts, philosophy and the arts, communication studies and the arts. Many courses are team-taught to provide the double perspective of practitioner and scholar. Integrated arts courses examine the creative process in relation to the artist, media, artwork, and audience. The program's goals are to create a climate conducive to the making and understanding of art and to enhance the general liberal arts education of its students.

Additional information about the Integrated Arts Program is available from the office of the Integrated Arts Program, the Weinberg College Office of Studies, and the dean's offices in the Schools of Music and Speech.

#### Minor in Integrated Arts

Students who satisfactorily complete seven courses qualify for the minor in integrated arts. Five of the seven are the program's core courses; two are drawn from a list of electives. Core courses cannot be taken for P/N credit. No background in visual arts, music, theater, or dance is required. Some Integrated Arts Program courses satisfy distribution requirements of Weinberg College, the School of Music, and the School of Speech. Students applying for the minor in integrated arts must show a minimum of five courses not double-counted in any other major(s).

**Core courses:** 190; two chosen from 291-1, 291-2, 291-3, 291-4; and (to be taken after completing two 300-level electives) 390-1 and 390-2.

**Elective courses:** ART HIST 395; ART 372; COMP LIT 365; ENGLISH 312; MUSICOL 336; PERF ST 326-1,2; R/TV/F 385; SOCIOL 350; DANCE 332, 333. A list of other approved elective courses is available in the program office.

## Courses

**INTG ART 190-0 Art Process** Team-taught foundational introduction to common concerns in the arts (theater, art, music), using the analytic paradigm of artist/media/artwork/audience to understand the creative process. Lecture/discussion and studio format. Visits to theaters, concerts, and galleries.

**INTG ART 291-1 Modes of Theater** Introduces the modes of theater and tools for their analysis through studio exercises and assignments. Performance from dramatic and nondramatic texts. Lecture/studio format. Prerequisite: 190 or permission of instructor.

**INTG ART 291-2 Modes of Art** Team-taught. Introduces the elements of visual perception through thematic study of important examples of world art combined with related creative work in varied media. Lecture/studio format. Prerequisite: 190 or permission of instructor.

**INTG ART 291-3 Modes of Music** Introduces the basic vocabulary of music so that students can analyze, create, and compose music in significant musical forms. Pre-requisite: 190 or permission of instructor.

**INTG ART 291-4 Modes of Dance** Introduces dance, the elements of choreography, and dance literacy; develops skills in oral and written communication about dance; and analyzes dance works in their unique contexts. Lecture/discussion and studio format with readings, videos, and films. Prerequisite: 190 or permission of instructor.

**INTG ART 390-1 Performance Seminar** Team-taught. Culmination of experiences and study of the previous courses in the Integrated Arts Program. Creates a final ensemble presentation integrating theater, art, and music and examines its design, direction, and production outside conventional institutional boundaries. Prerequisites: two 291 courses and two 300-level electives or permission of instructor.

**INTG ART 390-2 Toward a Theory of the Arts** Investigates the theoretical implication of the Integrated Arts Program paradigm of artist/media/artwork/audience. Examines fundamental texts and aesthetic issues; the arts and symbolic structures; and art and audience. Prerequisite: 390-1 or permission of instructor.

## **International Studies Program**

International studies is an undergraduate major with two special features: it is not situated in any one school but is open to students in all schools, and it does not replace any other major but complements it as an adjunct major that may be taken only in conjunction with a departmental major. Through an integrated combination of area studies, comparative studies, and international relations, the international studies major describes our interconnected world system and addresses such issues as how the contemporary world is politically structured and economically organized; what social problems, policy issues, and ethical choices confront us as individual and collective participants in the world system; and how cultural diversity, conflict, diffusion, and exchange characterize the world system and shape responses to it. In addition to inquiring into larger conceptual issues, students focus on the history, art, literature, music, beliefs, and social systems of one particular geographical/ cultural region.

## **Program of Study**

Eleven quarter-courses are required for the major as well as proficiency in a language other than English at a level equivalent to two full years of instruction. Three of the courses are a yearlong core sequence; three are core electives; four are regional (area studies) electives; and one is an upper-level seminar or research project.

#### Core sequence: INTL ST 201-1,2,3

**Core electives** (one from each of the following three groups):

- International politics and economics: POLI SCI 240; POLI SCI 340; POLI SCI 342; POLI SCI 345; POLI SCI 372; ECON 305; ECON 325; ECON 361
- Approaches to culture: ANTHRO 211; ANTHRO 215; PERF ST 216; LING 209; LING 310; RELIGION 110
- Approaches to international ethics and cooperation: INTL ST 202

**Regional electives:** four quarter-courses concerning either one geographical area listed below or a comparative category with designated courses. Students choose one course from each of the thematic groups, also listed below; if no course is available for a combination of area and group, students may, in consultation with a program adviser, substitute a course from another thematic group. Advisers have the lists of appropriate courses.

- Geographical areas: Africa, Asia, Europe, Latin America, Middle East, and the nongeographical comparative area
- Thematic groups: historical studies, literature, the arts, and beliefs and social systems

**Upper-level seminar or research project:** Each year several options are offered through International Studies or other departments. Students may do an independent research project (399) based on a proposal approved in advance by their international studies adviser.

**Advising:** Each student's major has a different combination of courses. Because international studies majors must show a minimum of nine courses not double-counted in any other major(s), students should see an international studies adviser when designing their programs.

## Courses

## INTL ST 201-1,2,3 Introduction to the World System

Three-quarter sequence investigating the origins and nature of contemporary global economic, political, and cultural interdependence. The first two quarters concern the historical evolution of the international system with focus on state formation, the rise of markets, and the creation of the interstate system. The third quarter highlights 20th-century problems. **1.** International system in the 18th and 19th centuries. **2.** Origins of the global system. **3.** International system in the 20th century.

**INTL ST 202-0 International Ethics** Explores whether states can pursue moral ends in world politics; whether citizens can hold governments to moral standards in foreign policy. Various approaches and topics, e.g., the Holocaust and human rights.

**INTL ST 399-0 Independent Research** Advanced research carried out under the supervision of a professor in a department related to the area of study. Consent of the director of the undergraduate's major required, following submission of a written proposal.

## Military Studies Programs

The military studies programs are not departments of any school; they are administered by the Office of the Provost.

## Naval Science

The Northwestern University Naval Reserve Officers Training Corps (NROTC) Unit was established in 1926 by congressional authorization when Northwestern became one of the original six universities to create a naval science department. The professor of naval science (PNS), who chairs Northwestern's Department of Naval Science, and department faculty members are commissioned officers serving on active duty in the United States Navy or Marine Corps. They are selected and nominated by their respective services and screened and approved by the University. The unit is located at 617 Haven Street, Evanston, Illinois 60208-4140, phone 847/491-3324.

## Naval ROTC Programs

The Naval Reserve Officers Training Corps offers young men and women the opportunity to obtain leadership and management experience as commissioned officers in the United States Navy (Navy option) or Marine Corps (Marine Corps option) after graduation from Northwestern, through either the Scholarship Program or the nonscholarship College Program.

At Northwestern, NROTC midshipmen lead essentially the same campus life as other students. They make their own arrangements for room and board and participate in campus activities of their choice. There are no prescribed academic majors for NROTC students, although scientific and technical studies are encouraged. NROTC students are required to complete the naval science curriculum, attend a weekly two-hour laboratory, and participate in four to six weeks of active duty for summer training at sea or ashore. NROTC students are required to abide by the Midshipmen Regulations issued by the unit. Under certain conditions, students may enroll in the NROTC Program at any time from the beginning of their freshman year until the end of their sophomore year.

#### Courses

In addition to the required courses listed below, participants in the NROTC program must satisfactorily complete a number of other courses prescribed by the Department of the Navy, which are offered by other departments of the University. Current information on those course requirements is available from the NROTC unit.

With the exception of 110 and 230, Northwestern credit is granted for the successful completion of naval science courses subject to limitations imposed by the responsible University faculty committee and by the undergraduate schools. For more information on credit availability, consult the dean of each school. Naval science courses are open to non-NROTC students with department approval. Courses with an asterisk (\*) are not required for Marine Corps option students.

#### **NAV SCI 110-0 Introduction to Naval Science**

Components of the naval organization, its use and function in the Department of the Navy and Armed Forces of the United States.

**NAV SCI 120-0 Seapower and Maritime Affairs** A survey of U.S. naval and maritime history in the context of world maritime development, including the historical evolution of sea power and the role of U.S. naval forces in an era of geopolitical change.

**\*NAV SCI 210-0 Marine Navigation** The theory underlying marine navigation. Basic piloting; dead reckoning, terrestrial lines of position, set and drift, extensive chart work; elements of celestial navigation; solution of the navigational triangle; use of the sun, moon, stars, and planets in position finding at sea; actual sextant observations of the sun/moon (weather permitting).

\*NAV SCI 220-0 Naval Ship Systems II (Naval Weapons Systems) Theory and concepts of naval weapons systems. Ballistics of both powered and free-flight modes in single or multiple environments; theory of target acquisition, identification and tracking; command and control systems. Development of ability to analyze, synthesize, and critically evaluate representative naval weapons systems.

\*NAV SCI 230-0 Leadership and Management Seminar for Naval Officers Addresses leadership, management, and organizational behavior issues facing naval officers in a stressful environment, including strategic planning, time management, communication, counseling, team building, and decision making. Taken concurrently with IEMS 322 Industrial Psychology. **\*NAV SCI 331-0 Naval Operations** Consists of several distinct segments. Students examine or practice rules of the nautical road, use of the maneuvering board, deck seamanship, basic shiphandling theory, and weather systems.

**NAV SCI 336-0 Evolution of Warfare** (Marine Corps option only) Evolution of warfare from the Alexandrian period to the present; broad coverage of history of warfare. Actions and decisions of opposing commanders evaluated in terms of classic theoretical principles of war.

**NAV SCI 341-0 Naval Leadership and Ethics** Examines the ethical underpinnings of leadership and its relevance to a profession that employs military force at the direction of the national command authority. Prepares prospective officers for their initial job responsibilities and considers ethical issues related to large and diverse organizations, just war theory, the military justice system, and leadership accountability in naval organizations.

## \*NAV SCI 345-0 Naval Ship Systems I (Naval Engineering)

Introduction to thermodynamics and basic power cycles used in naval propulsion and nonpropulsion auxiliary systems. Basics of electrical theory and shipboard electrical systems. Elements of ship design to achieve safe operations and ship stability characteristics.

**NAV SCI 346-0 History of Amphibious Warfare** (Marine Corps option only) Evolution of amphibious warfare; development of amphibious concepts and principles. Major amphibious operations from Gallipoli to present.

**NAV SCI 350-0 Naval Science Laboratory** One two-hour lab weekly, required each quarter for all midshipmen. Emphasizes professional development and skills as well as drill and physical fitness.

## Aerospace Studies

Northwestern students may participate in the programs of the Air Force Reserve Officers Training Corps through a cross-enrollment agreement with the Illinois Institute of Technology (IIT). Within the limits of the Northwestern school in which the student is registered, credits earned in approved aerospace studies courses at IIT may be counted toward the degree requirements at Northwestern. Further information can be obtained from Air Force ROTC Detachment 195, Illinois Institute of Technology, 10 West 31st Street, Chicago, Illinois 60616, phone 312/567-3525.

## Military Science

Northwestern students may participate in the programs of the Army Reserve Officers Training Corps through a crossenrollment agreement with the University of Illinois at Chicago (UIC). Credits earned in approved military science courses at UIC may be counted toward degree requirements within the limits of the Northwestern school in which the student is registered. Further information can be obtained from the Department of Military Science, University of Illinois at Chicago, 115 South Sangamon Street, M/C 252, Chicago, Illinois 60607, phone 312/996-3451.

## **Music Theatre Program**

The Certificate in Music Theatre provides the opportunity for School of Music students majoring in voice and School of Speech students majoring in theater to create a second area of specialization that is important to their development as musical theater artists. For voice majors, the program provides training in acting and other theater courses. Theater majors have weekly voice classes and exposure to other music offerings.

The prescribed sequence of courses is only open to students accepted into the program through audition. The auditions are held annually in the spring quarter and are limited to freshman and sophomore theater and voice majors. Auditioners are required to perform a vocal selection and a monologue and to participate in a dance audition.

## **Certificate Requirements for Voice Majors**

Voice majors must take seven units of credit and four noncredit courses:

- THEATRE 243-1,2,3 Acting I: Principles of Characterization (3 units)
- THEATRE 352-1,2 Music Theatre Techniques (2 units)
- THEATRE 367 History of the Lyric Theatre (1 unit)
- Design or dance elective (1 unit)
- THEATRE 119 Production Laboratory (one quarter, no credit)
- Dance (3 classes, no credit)

#### **Certificate Requirements for Theatre Majors**

Theatre majors must take seven units of credit and six noncredit courses:

- VOICE 102 Beginning Voice (1.5 units)
- MUSIC 127 Keyboard Skills (1 unit)
- VOICE 202 Voice Performance: Musical Theatre (1.5 units)
- THEATRE 352-1,2 Music Theatre Techniques (2 units)
- THEATRE 367 History of the Lyric Theatre (1 unit)
- Dance (minimum of 6 classes, no credit)

## Service Learning Certificate

Students across the University may earn a certificate in service learning through a two-year program that connects volunteer experience with an academic component to increase understanding of community needs. Three courses are required — SESP 202 Introduction to Community Development and two others selected from an approved list — along with 50 hours of volunteer service in each of two years and participation in facilitated discussions to reflect on the experience. In the second year of the program, students complete a capstone project resulting in a research paper or study analyzing a community issue. For more information and an application, contact the Office of Student Affairs in the School of Education and Social Policy.

## Transportation and Logistics Program

The interschool Transportation and Logistics Program offers a minor that is available to all undergraduate students.

Passenger and freight transportation represents nearly a fifth of the U.S. gross domestic product and influences every aspect of our lives: where we live, where we work, and the goods we can purchase. The study of transportation and logistics is inherently interdisciplinary, reaching across disciplines, schools, and departments. Northwestern has offered relevant courses through the Departments of Civil and Industrial Engineering and Management Sciences in the McCormick School of Engineering and Applied Sciences and the Department of Economics and other social science departments in the Weinberg College of Arts and Sciences. This minor now offers undergraduates the opportunity to obtain a more rounded education in transportation and logistics than that offered within their selected major. The curriculum equips students with a broad understanding of the economics, engineering, and operations of transportation and logistics systems and the role of public policy.

The minor is administered by the Transportation Center, an interdisciplinary research center founded in 1954 that has previously specialized in graduate education. The center's jointly appointed faculty is drawn from many of the participating departments. Additional information about the program is available from the Transportation Center.

#### Minor in Transportation and Logistics

Students are required to complete seven courses, of which one is a required course. The other six courses must include at least three core courses, at least two of which must be outside the school in which the student is majoring.

Students are not allowed to double-count courses that are part of their major but can count courses that fulfill related-course, distribution, or social science and humanities requirements. It is assumed that students will already have taken courses in calculus and in probability and statistics as part of their major.

**Required course:** TRANS 310 Seminar in Transportation and Logistics

**Core courses:** ECON 310-1; ECON 355; CIV ENG 371; CIV ENG 372; CIV ENG 376; IEMS 310 or IEMS 313; IEMS 381. No substitutions will be allowed for core courses. **Elective courses:** ECON 309: ECON 337; ECON 349; ECON 350; ECON 354; ECON 361; ECON 370, ECON 381-1,2; GEOG 341; GEOG 343, HISTORY 322-2; POLI SCI 221; POLI SCI 321; POLI SCI 371; SOCIOL 301; SOCIOL 312; CIV ENG 338; CIV ENG 360; IEMS 315; IEMS 317; either IEMS 326 or ECON 360; IEMS 382; one unit of approved independent study. Other courses will be considered for credit toward the minor if appropriate to the student's program of study and approved by the Program Committee. A full list of approved elective courses is available from the program office.

## Course

## TRANS 310-0 Seminar in Transportation and Logistics

Yearlong senior seminar on the structure of the transportation and supply chain industries and evaluation of relevant public policy. Students will receive one credit in the spring quarter of their senior year.

## **Undergraduate Leadership Program**

The Undergraduate Leadership Program is an interschool certificate program open to Northwestern first- and second-year undergraduates. The program helps students understand the nature of leadership and prepares them to become leaders on campus, in the community, and in their professions. Through course work, small group activities, seminar discussions, lectures, off-campus retreats, and involvement in campus and community organizations, participants learn the theories of leadership, experience the challenge of leading others, and create a sense of community with each other and members of participating organizations.

## **Certificate Requirements**

The program combines theoretical, historical, practical, and experiential knowledge into a two-phase course of study. In the first phase, freshmen and sophomores begin the program by first attending an outdoor leadership retreat and then taking two required courses on leadership. After successfully completing both courses, students enter the second phase. The activities in the second phase are primarily extracurricular and include a community connections retreat, seminars, lectures, and externships.

The Office of the Provost awards a certificate to each student who successfully completes both phases of the Undergraduate Leadership Program, usually by the end of the junior year. Beyond the formal program, certificate holders may draw on their course work and experiences to enrich community life at Northwestern and in the surrounding community, fulfilling the program's goal of engaging constructively in civic and professional leadership activities.

## Courses

The following courses are required for the first phase of the Undergraduate Leadership Program. SPCH 204 offers conceptual models of leadership and experience in leading group analyses of case studies, which are videotaped and reviewed by group members. HISTORY 295 begins with the view that leaders and leadership are uniquely related to their constituency and their historical context. The course illustrates the consequences of the success or failure of leadership.

**GEN SPCH 204-0 Paradigms and Strategies of Leadership** See Introductory and Related Courses in the School of Speech.

**HISTORY 295-0 Leaders in History** See History in Weinberg College.

## Writing Arts

The Center for the Writing Arts was established in 1994 to highlight Northwestern's strengths in the teaching of writing and to provide a focal point for continuing efforts to fulfill the University's commitment to excellence in writing. The center sponsors a number of programs, including courses for advanced creative writers taught by distinguished visiting writers-in-residence, innovative writing-intensive courses for freshmen, and a variety of colloquia for the entire campus community on topics related to writing.

#### Courses

Writing arts courses 301, 302, and 303 are taught by a visiting writer-in-residence. For more information about writing arts courses and admission requirements, consult with a member of the Center for the Writing Arts.

WRITING 115-5,6 Modes of Writing A team-taught course, designed specifically for freshmen, that combines rigorous exploration of a lively intellectual theme with close attention to helping students become strong writers. The format alternates between large-group lecture and discussion sessions led by an accomplished lecturer and small, intensive seminar meetings led by a skillful teacher of writing. Themes explored typically have the spark of controversy and sharp focus characteristic of topics for successful freshman seminars, but also the broader historical or theoretical scope characteristic of distribution requirement courses. Recent themes have included Time and Chance, The Bible and Its Transformations, and Language and Social Policy. Weinberg students earn distribution requirement credit for the first quarter and freshman seminar credit for the second quarter. Students are expected to enroll for both quarters; the first quarter is a prerequisite for the second. May not be taken P/N.

**WRITING 301-0 The Art of Fiction** Fundamental skills of narrative in the creation of fictional works. Extensive writing exercises. Prerequisites: background in writing, a writing-intensive course, and submission of a manuscript of 5–15 pages.

**WRITING 302-0 The Art of Poetry** Writing of poetry in the light of the poetic, linguistic, and historical tradition. Extensive writing exercises. Prerequisites: serious interest in poetry, a writing-intensive course, and submission of sample poems.

**WRITING 303-0 The Art of Expository Prose** Writing as a fundamental skill in a particular field such as science, law, journalism, literature, or political commentary. Extensive writing exercises. Prerequisites: background in writing, a writing-intensive course, and submission of a manuscript of 5–15 pages.

Lofquist, PhD Assistant Dean and Senior Lecturer in Chemistry Susan K. Pinkard, PhD Assistant Dean and Senior Lecturer in History Richard P. Weimer, MA Assistant Dean

## African American Studies

Henry Binford (PhD Harvard) Associate Professor; also History Martha Biondi (PhD Columbia) Assistant Professor Carole Boyce Davies (PhD Ibadan, Nigeria) Melville J. Herskovits Professor Dilip P. Goankar (PhD Pittsburgh) Associate Professor; also Communication Studies Robert J. Gooding-Williams (PhD Yale) Professor; also Philosophy Jane I. Guyer (PhD Rochester) Professor; also Anthropology; Director, Program of African Studies Michael G. Hanchard (PhD Princeton) Associate Professor; also Political Science Nancy K. MacLean (PhD Wisconsin) Associate Professor; also History Aldon D. Morris (PhD SUNY Stony Brook) Professor; also Sociology Mary Pattillo-McCoy (PhD Chicago) Assistant Professor; also Sociology, Institute for Policy Research Sandra L. Richards (PhD Stanford) Professor; also Performance Studies, Theatre Eric J. Sundquist (PhD Johns Hopkins) Professor; also English; Dean, Weinberg College

## African and Asian Languages Program

Richard Lepine (PhD Wisconsin) Senior Lecturer and Director Edna G. Grad (PhD Texas) College Lecturer Li-Cheng Gu (PhD Oregon) Senior Lecturer Wen-hsiung Hsu (PhD Chicago) College Lecturer Hong Jiang (MEd Cincinnati) Senior Lecturer Eunmi Lee (MA Indiana) Senior Lecturer Xiaoxing Liu (PhD Illinois) Lecturer Phyllis I. Lyons (PhD Chicago) Associate Professor Rami Nair (PhD Northwestern) Lecturer Nasrin Qader (PhD Wisconsin) Lecturer Junko Sato (MEd Massachusetts) Lecturer Yumi Shiojima (MEd Pennsylvania) Lecturer Noriko Taira (MEd Massachusetts) Senior Lecturer

## Anthropology

Helen B. Schwartzman (PhD Northwestern) Professor and Chair Caroline H. Bledsoe (PhD Stanford) Professor James A. Brown (PhD Chicago) Professor Michael F. Dacey (PhD Washington) Professor; also Geological Sciences; Senior Associate Dean, Weinberg College Micaela di Leonardo (PhD California Berkeley) Professor; also Gender Studies Timothy Earle (PhD Michigan) Professor Jane I. Guyer (PhD Rochester) Professor; also African American Studies; Director, Program of African Studies Karen T. Hansen (PhD Washington) Professor John C. Hudson (PhD Iowa) Professor William Irons (PhD Michigan) Professor Robert G. Launay (PhD Cambridge) Professor William Leonard (PhD Michigan) Associate Professor Thomas McDade (PhD Emory) Assistant Professor

Cynthia Robin (PhD Pennsylvania) Assistant Professor Jack Sidnell (PhD Toronto) Assistant Professor Gil J. Stein (PhD Pennsylvania) Associate Professor Mary J. Weismantel (PhD Illinois) Associate Professor; also Director, Latin American and Caribbean Studies Program

## Art History

S. Hollis Clayson (PhD UCLA) Associate Professor and Chair Whitney Davis (PhD Harvard) Professor Stephen F. Eisenman (PhD Princeton) Associate Professor Sarah Fraser (PhD California Berkeley) Assistant Professor Sandra W. Hindman (PhD Cornell) Professor Lyle Massey (PhD UCLA) Assistant Professor David Mickenberg (MA Wisconsin) Lecturer; also Director, Mary and Leigh Block Museum of Art Claudia Swan (PhD Columbia) Assistant Professor David T. Van Zanten (PhD Harvard) Professor

## Art Theory and Practice

Jeanne Dunning (MFA Art Institute Chicago) Associate Professor and Chair Pamela Bannos (MA Illinois) Lecturer William S. Cass (MFA Art Institute Chicago) Lecturer Charlie C. Cho (MFA Art Institute Chicago) Lecturer William Conger (MFA Art Institute Chicago) Professor Daniel J. Devening (MFA Illinois) Lecturer Judy Ledgerwood (MFA Art Institute Chicago) Assistant Professor Ed Paschke (MFA Art Institute Chicago) John Evans Professor of Art James R. Valerio (MFA Art Institute Chicago) Professor James W. Yood (MA Chicago) Lecturer and Assistant Chair

## Biochemistry, Molecular Biology, and Cell Biology

Jonathan Widom (PhD Stanford) Professor and Chair; also Chemistry Gregory J. Beitel (PhD MIT) Assistant Professor Lawrence B. Dumas (PhD Wisconsin) Professor; also Provost, Northwestern University J. Douglas Engel (PhD Oregon) Owen L. Coon Professor of Molecular Biology Holly Falk-Krzesinski (PhD Loyola Chicago) Lecturer and Assistant Chair Richard F. Gaber (PhD Wisconsin) Associate Professor and Charles Deering McCormick Professor of Teaching Excellence Hilary Arnold Godwin (PhD Stanford) Assistant Professor; also Chemistry Erwin Goldberg (PhD Iowa) Professor Linda Hicke (PhD California Berkeley) Assistant Professor Brian M. Hoffman (PhD Caltech) Professor; also Chemistry Robert A. Holmgren (PhD Harvard) Soretta and Henry Shapiro Research Professor of Molecular Biology; also Neurobiology and Physiology Theodore S. Jardetzky (PhD Basel) Associate Professor Carol LaBonne (PhD Harvard) Assistant Professor Laimonis Laimins (PhD Chicago) Professor; also Microbiology and Immunology Robert A. Lamb (PhD Cambridge) John Evans Professor of Molecular and Cellular Biology; also Investigator, Howard Hughes Medical Institute

Daniel I. Linzer (PhD Princeton) Professor; also Associate Dean, Weinberg College Howard L. Lipton (MD Nebraska) Professor; also Clinical Medicine, Neurology Paul A. Loach (PhD Yale) Professor; also Chemistry Robert C. MacDonald (PhD UCLA) Professor; also Neurobiology and Physiology Andreas Matouschek (PhD Cambridge) Assistant Professor Kelly E. Mayo (PhD Washington) Professor; also Neurobiology and Physiology Alfonso Mondragón (PhD Chicago) Professor Richard I. Morimoto (PhD Chicago) John Evans Professor of Biology; also Associate Provost for Graduate Education, Northwestern University, and Dean, Graduate School Francis C. Neuhaus (PhD Duke) Professor Thomas V. O'Halloran (PhD Columbia) Professor; also Chemistry Ishwar Radhakrishnan (PhD Columbia) Assistant Professor Amy Rosenzweig (PhD MIT) Assistant Professor; also Chemistry Richard B. Silverman (PhD Harvard) Professor and Charles Deering McCormick Professor of Teaching Excellence; also Chemistry Eric Sontheimer (PhD Yale) Assistant Professor Neil E. Welker (PhD Case Western Reserve) Professor Tai Te Wu (PhD Harvard) Professor; also Biomedical Engineering

## Biological Sciences, Undergraduate Program in

Jon E. Levine (PhD Illinois) Professor and Director; also Neurobiology and Physiology Darlene E. Buenzow (PhD Northwestern) Lecturer Roberta W. Ellington (BA Barat) Lecturer Gary J. Galbreath (PhD Chicago) College Lecturer and Associate Director John C. Mordacq (PhD Northwestern) Senior Lecturer and Director of Undergraduate Laboratories Joseph Walsh (PhD Chicago) Lecturer

## Chemistry

James A. Ibers (PhD Caltech) Charles E. and Emma H. Morrison Professor of Chemistry and Chair Daniel H. Appella (PhD Wisconsin) Assistant Professor Barry Coddens (PhD Wayne State) Lecturer and Director of Undergraduate Studies Donald E. Ellis (PhD MIT) Professor; also Physics and Astronomy Hilary Arnold Godwin (PhD Stanford) Assistant Professor; also Biochemistry, Molecular Biology, and Cell Biology Brian M. Hoffman (PhD Caltech) Professor; also Biochemistry, Molecular Biology, and Cell Biology Lynn Hunsberger (PhD Wisconsin) Lecturer Joseph T. Hupp (PhD Michigan State) Charles E. and Emma A. Morrison Professor of Chemistry Martin F. Jarrold (PhD Warwick) Dow Chemical Company Research Professor Joseph B. Lambert (PhD Caltech) Clare Hamilton Hall Professor of Chemistry and Charles Deering McCormick Professor of Teaching Excellence Frederick D. Lewis (PhD Rochester) Professor Paul A. Loach (PhD Yale) Professor; also Biochemistry, Molecular Biology, and Cell Biology Marvin J. Lofquist (PhD Northwestern) Senior Lecturer; also Assistant Dean, Weinberg College Tobin J. Marks (PhD MIT) Vladimir N. Ipatieff Professor of Chemistry; also Materials Science and Engineering Chad A. Mirkin (PhD Penn State) George Rathman Professor

SonBinh Nguyen (PhD Caltech) Assistant Professor Frederick J. Northrup (PhD Toronto) Senior Lecturer Thomas V. O'Halloran (PhD Columbia) Professor; also Biochemistry, Molecular Biology, and Cell Biology Kenneth R. Poeppelmeier (PhD Iowa State) Professor John A. Pople (PhD Cambridge) Board of Trustees Professor of Chemistry Owen P. Priest (PhD Minnesota) Lecturer Mark A. Ratner (PhD Northwestern) Charles E. and Emma H. Morrison Professor of Chemistry Amy Rosenzweig (PhD MIT) Assistant Professor; also Biochemistry, Molecular Biology, and Cell Biology George C. Schatz (PhD Caltech) Professor Robert Scott (PhD Northwestern) Lecturer and Executive Director Terry L. Sheppard (PhD Columbia) Assistant Professor Duward F. Shriver (PhD Michigan) Charles E. and Emma H. Morrison Professor of Chemistry Richard B. Silverman (PhD Harvard) Professor and Charles Deering McCormick Professor of Teaching Excellence; also Biochemistry, Molecular Biology, and Cell Biology Kenneth G. Spears (PhD Chicago) Professor; also Biomedical Engineering Peter C. Stair (PhD California Berkeley) Professor Samuel Stupp (PhD Northwestern) Board of Trustees Professor of Materials Science and Engineering, Chemistry, and Medicine; also Biomedical Engineering Richard P. Van Duyne (PhD North Carolina) Charles E. and Emma H. Morrison Professor of Chemistry Michael R. Wasielewski (PhD Chicago) Professor (Argonne National Laboratory)

Eric Weitz (PhD Columbia) Professor Jonathan Widom (PhD Stanford) Professor; also Soretta and Henry Shapiro Research Professor of Molecular Biology (Biochemistry, Molecular Biology, and Cell Biology)

## Classics

Robert W. Wallace (PhD Harvard) Associate Professor and Chair Reginald E. Allen (PhD Yale) Professor; also Philosophy Daniel H. Garrison (PhD California Berkeley) Professor Ahuvia Kahane (PhD Oxford) Associate Professor Richard Kraut (PhD Princeton) Professor; also Philosophy S. Sara Monoson (PhD Princeton) Associate Professor; also Political Science Martin Mueller (PhD Indiana) Professor; also English James E. Packer (PhD California Berkeley) Professor Jeanne R. Ravid (MA Northwestern) Lecturer John Wright (PhD Indiana) John Evans Professor of the Latin Language and Literature

#### Economics

Joel Mokyr (PhD Yale) Robert H. Strotz Professor and Chair; also History Atila Abdulkadiroglu (PhD Rochester) Assistant Professor Marcus Alexis (PhD Minnesota) Board of Trustees Professor of Economics; also Management and Strategy Joseph G. Altonji (PhD Princeton) Professor; also Institute for Policy Research Gadi Barlevy (PhD Harvard) Assistant Professor Marco Bassetto (PhD Chicago) Assistant Professor

Ronald R. Braeutigam (PhD Stanford) Harvey Kapnick Professor of Business Institutions; also Transportation Center Lawrence J. Christiano (PhD Columbia) Professor Kim-Sau Chung (PhD Wisconsin) Assistant Professor Robert M. Coen (PhD Northwestern) Professor Timothy G. Conley (PhD Chicago) Assistant Professor Eddie Dekel (PhD Harvard) Professor Martin Eichenbaum (PhD Minnesota) Professor Jeffrey C. Ely (PhD California Berkeley) Assistant Professor Joseph P. Ferrie (PhD Chicago) Associate Professor; also Institute for Policy Research Robert J. Gordon (PhD MIT) Stanley G. Harris Professor of the Social Sciences Luojia Hu (PhD Princeton) Assistant Professor; also Institute for Policy Research Morton I. Kamien (PhD Purdue) Professor; also Joseph and Carole Levy Distinguished Professor of Entrepreneurship (Managerial Economics and Decision Sciences) Ricky P. K. Lam (PhD Yale) Assistant Professor Charles F. Manski (PhD MIT) Board of Trustees Professor; also Statistics, Institute for Policy Research Kiminori Matsuyama (PhD Harvard) Professor Rosa L. Matzkin (PhD Yale) Household International Inc. Research Professor in Economics Bruce D. Meyer (PhD MIT) Professor; also Institute for Policy Research Alexander Monge (PhD Chicago) Assistant Professor Dale T. Mortensen (PhD Carnegie Mellon) Ida C. Cook Professor of Consumer Economics

Leon N. Moses (PhD Harvard) Professor; also Transportation Center Roger B. Myerson (PhD Harvard) Professor; also Harold L. Stuart Professor of Decision Sciences (Managerial Economics and Decision Sciences), Political Science John C. Panzar (PhD Stanford) Louis W. Menk Professor; also Transportation Center Robert H. Porter (PhD Princeton) William R. Kenan Jr. Professor Stanley Reiter (PhD Chicago) Charles E. and Emma H. Morrison Professor of Economics and Mathematics; also Managerial Economics and Decision Sciences, Mathematics William P. Rogerson (PhD Caltech) Professor Mark A. Satterthwaite (PhD Wisconsin) Earl Dean Howard Professor of Managerial Economics; also Managerial Economics and Decision Sciences Ian P. Savage (PhD Leeds) College Lecturer; also Transportation Center Eric G. Schulz (PhD Northwestern) Lecturer Christopher Taber (PhD Chicago) Assistant Professor; also Institute for Policy Research Burton Weisbrod (PhD Northwestern) John Evans Professor of Economics; also Institute for Policy Research Michael Whinston (PhD MIT) Robert E. and Emily King Professor of Economics; also Transportation Center Mark P. Witte (PhD Northwestern) Lecturer Asher Wolinsky (PhD Stanford) Alfred Chase Professor Paula Worthington (PhD Northwestern) Lecturer English

Betsy Erkkila (PhD California Berkeley) Noyes Professor of English and Chair Steven L. Bates (PhD Princeton) Lecturer; also Associate Dean, Weinberg College Kevin L. Bell (PhD NYU) Assistant Professor

Paul Breslin (PhD Virginia) Professor Albert R. Cirillo (PhD Johns Hopkins) Associate Professor Tracy Davis (PhD Warwick) Professor; also Performance Studies, Theatre Brian T. Edwards (PhD Yale) Assistant Professor Joseph Epstein (BA Chicago) Lecturer Lianna Farber (PhD Harvard) Assistant Professor Mary E. Finn (PhD Bryn Mawr) Senior Lecturer; also Assistant Dean, Weinberg College Christine Froula (PhD Chicago) Professor Reginald Gibbons (PhD Stanford) Professor Susannah Gottlieb (PhD Chicago) Assistant Professor Wendy Griswold (PhD Harvard) Professor; also Sociology Jay A. Grossman (PhD Pennsylvania) Assistant Professor Christopher C. Herbert (PhD Yale) Professor Mary Kinzie (PhD Johns Hopkins) Professor Jules David Law (PhD Johns Hopkins) Associate Professor Joanna B. Lipking (PhD Columbia) Lecturer Lawrence Lipking (PhD Cornell) Chester D. Tripp Professor of the Humanities Susan A. Manning (PhD Columbia) Associate Professor; also Performance Studies, Theatre John D. Margolis (PhD Princeton) Professor; also Associate Provost, Northwestern University Jeffrey Masten (PhD Pennsylvania) Associate Professor Martin Mueller (PhD Indiana) Professor; also Classics

Barbara J. Newman (PhD Yale) Professor; also Religion Regina M. Schwartz (PhD Virginia) Associate Professor; also Religion Carl S. Smith (PhD Yale) Franklyn Bliss Snyder Professor of English; also History Julia Stern (PhD Columbia) Associate Professor Eric J. Sundquist (PhD Johns Hopkins) Professor; also African American Studies; Dean, Weinberg College Helen F. Thompson (PhD Duke) Assistant Professor Blakey Vermuele (PhD California Berkeley) Assistant Professor Wendy Wall (PhD Pennsylvania) Associate Professor Dorothy Wang (PhD California Berkeley) Assistant Professor Alexander G. Wehelive (PhD Rutgers) Assistant Professor

## French and Italian

Michal P. Ginsburg (PhD Yale) Professor and Chair; also German Marie-Thérèse Cunningham (MA Grenoble III) Lecturer Caroline De Langhe-Perce (MA Kansas) Lecturer Scott Durham (PhD Yale) Associate Professor Bernadette Fort (Doctorat du Troisième Cycle Paris) Weinberg College Board of Visitors Research and Teaching Professor; also German Doris L. Garraway (PhD Duke) Assistant Professor Giulia Guidotti (MEd American) Lecturer Phyllis Horn-Lipparini (MA Northwestern) Lecturer Anne Landau (PhD Northwestern) Lecturer

Jean A. Mainil (PhD Michigan) Assistant Professor Stefano Mula (PhD Cagliari) Lecturer William D. Paden (PhD Yale) Professor Simone Pavlovich (PhD Northwestern) Lecturer Stella Radulescu (PhD Bucharest) Lecturer Christiane Rey (Licence en Droit, Liège) Lecturer Alessia Ricciardi (PhD Yale) Assistant Professor Sylvie Romanowski (PhD Yale) Associate Professor Mireille Rosello (PhD Michigan) Professor Thomas H. Simpson (PhD Chicago) Lecturer Margaret Sinclair (PhD California Berkeley) Lecturer Janine W. Spencer (PhD Northwestern) College Lecturer Davide Stimilli (PhD Yale) Assistant Professor Claude Tournier (PhD Northwestern) Senior Lecturer Jane Bradley Winston (PhD Duke) Assistant Professor

#### **Geological Sciences**

Abraham Lerman (PhD Harvard) Professor and Chair Craig R. Bina (PhD Northwestern) Professor; also Associate Dean for Undergraduate Studies and Advising, Weinberg College Alan D. Brandon (PhD Alberta) Assistant Professor Michael F. Dacey (PhD Washington) Professor; also Antbropology; Senior Associate Dean, Weinberg College Jean-François Gaillard (DSc Paris) Assistant Professor; also Civil Engineering Youngsook Huh (PhD MIT) Assistant Professor Donna M. Jurdy (PhD Michigan) Professor Emile André Okal (PhD Caltech) Professor John W. Rudnicki (PhD Brown) Professor; also Civil Engineering, Mechanical Engineering Raymond Russo (PhD Northwestern) Assistant Professor Bradley B. Sageman (PhD Colorado) Associate Professor Robert C. Speed (PhD Stanford) William Deering Professor of Geological Sciences Seth A. Stein (PhD Caltech) Professor

## German

John A. McCumber (PhD Toronto) Professor and Chair William Anthony (PhD Johns Hopkins) College Lecturer; also Director, Study Abroad Office Kerstin Behnke (PhD Stanford) Assistant Professor Volker O. Dürr (PhD Princeton) Associate Professor Peter D. Fenves (PhD Johns Hopkins) Professor; also Philosophy Bernadette Fort (Doctorat du Troisième Cycle Paris) Weinberg College Board of Visitors Research and Teaching Professor; also French and Italian Jeffrey B. Garrett (PhD California Berkeley) Lecturer; also University Library Michal Ginsburg (PhD Yale) Professor; also French and Italian Stefanie Harris (PhD Emory) Assistant Professor Peter F. Hayes (PhD Yale) Professor; also Theodore Z. Weiss Professor Holocaust Studies (History) Franziska B. Lys (PhD Northwestern) College Lecturer Denise M. Meuser (MA Indiana) Lecturer

Helmut Müller-Sievers (PhD Stanford) Associate Professor John Paluch (MA Illinois) Lecturer Rainer Rumold (PhD Stanford) Associate Professor Stefan Soldovieri (PhD Wisconsin) Lecturer Géza von Molnár (PhD Stanford) Professor Ingrid Zeller (MA Columbia) Lecturer

## Hispanic Studies

Lucille Kerr (PhD Yale) Professor and Chair Stewart I. M. Adams (PhD St. Andrews) Lecturer Sandra M. Anderson (PhD Northwestern) Lecturer Priscilla Archibald (PhD Stanford) Assistant Professor Maria Bisabarros (MA SUNY Stony Brook) Lecturer Francisco J. Castro (PhD Texas) Lecturer Chyi Chung (MA Loyola Chicago) Lecturer Isabella Civil (MA Pennsylvania) Lecturer Heather L. Colburn (PhD North Carolina) Lecturer Gonzalo Díaz-Migoyo (PhD NYU) Professor Patricia N. Fahey (PhD Wisconsin) Lecturer Darío Fernández-Morera (PhD Harvard) Associate Professor Sonia E. Garcia (PhD Texas) Senior Lecturer

Laura La Bauve-Maher (MA Georgetown) Adjunct Lecturer; also Coordinator; Hispanic/Latino Student Services, Northwestern University Marla LaPage (MA Missouri) Lecturer Elisa Martí-López (PhD NYU) Assistant Professor Susan D. Pechter (MA Northwestern) Lecturer Humberto E. Robles (PhD Northwestern) Professor Sheri Ann Sanford (PhD Wisconsin) Lecturer Tasha Seago-Ramaly (MA Delaware) Lecturer Clare Sullivan (MA NYU) Lecturer Vera R. Teixeira (MPh Yale) Lecturer Judith A. Veramendi (MA Columbia College) Lecturer

## History

Edward W. Muir (PhD Rutgers) Clarence Ver Steeg Term Professor and Chair Kenneth L. Alder (PhD Harvard) Associate Professor and Harold and Virginia Anderson Professor Kenneth R. Bain (PhD Texas) Senior Lecturer; also Director, Searle Center for Teaching Excellence Josef J. Barton (PhD Michigan) Associate Professor Henry C. Binford (PhD Harvard) Associate Professor; also African American Studies Timothy H. Breen (PhD Yale) William Smith Mason Professor of American History Louisa A. Burnham (PhD Northwestern) Lecturer John S. Bushnell (PhD Indiana) Professor; also Associate Dean, Weinberg College Peter J. Carroll (PhD Yale) Assistant Professor

Lane Fenrich (PhD Northwestern) Senior Lecturer; also Assistant Dean, Weinberg College Benjamin Frommer (PhD Harvard) Assistant Professor Jonathon P. Glassman (PhD Wisconsin) Associate Professor Adam Green (PhD Yale) Assistant Professor; also African American Studies Steven Hahn (PhD Yale) Professor Peter F. Hayes (PhD Yale) Theodore Z. Weiss Professor of Holocaust Studies; also German Laura E. Hein (PhD Wisconsin) Associate Professor T. William Heyck (PhD Texas) Professor John O. Hunwick (PhD London) Professor; also Religion Seth S. Jacobs (PhD Northwestern) Lecturer Richard A. Kieckhefer (PhD Texas) Professor; also Religion Jacob Lassner (PhD Yale) Philip M. and Ethel Klutznick Professor of Jewish Civilization; also Religion Robert E. Lerner (PhD Princeton) Peter B. Ritzma Professor of the Humanities Tessie P. Liu (PhD Michigan) Associate Professor Melissa Macauley (PhD California Berkeley) Associate Professor and Wayne V. Jones II Research Professor of History Nancy K. MacLean (PhD Wisconsin) Associate Professor Sarah C. Maza (PhD Princeton) Jane Long Professor Stephanie McCurry (SUNY Binghamton) Associate Professor John R. McLane (PhD London) Professor Joel Mokyr (PhD Yale) Professor; also Robert H. Strotz Professor (Economics)

E. William Monter Jr. (PhD Princeton) Professor Alexandra Owen (PhD Sussex) Associate Professor Carl F. Petry (PhD Michigan) Professor Susan K. Pinkard (PhD Chicago) Senior Lecturer; also Assistant Dean, Weinberg College Frank R. Safford (PhD Columbia) Gerald and Marjorie G. Fitzgerald Professor of Economic History David L. Schoenbrun (PhD UCLA) Associate Professor Ethan Shagan (PhD Princeton) Assistant Professor Michael S. Sherry (PhD Yale) Richard Leopold Professor Carl S. Smith (PhD Yale) Professor; also Franklyn Bliss Snyder Professor of English (English) Garry Wills (PhD Yale) Adjunct Professor Ji-Yeon Yuh (PhD Princeton) Assistant Professor

## Linguistics

Gregory L. Ward (PhD Pennsylvania) Professor and Chair Ann R. Bradlow (PhD Cornell) Assistant Professor Robert A. Gundlach (PhD Northwestern) Professor; also Director, Writing Program Christopher Kennedy (PhD California Santa Cruz) Assistant Professor Jeffrey L. Lidz (PhD Delaware) Assistant Professor Rae A. Moses (PhD Texas) Associate Professor Janet Pierrehumbert (PhD MIT) Professor

## Mathematics

Eric M. Friedlander (PhD MIT) Noyes Professor of Mathematics and Chair Martina Bode (PhD Brandeis) Lecturer Keith H. Burns (PhD Warwick) Professor Gui-Qiang Chen (PhD Academia Sinica) Professor Stephen D. Fisher (PhD Wisconsin) Professor; also Associate Provost, Northwestern University John M. Franks (PhD California Berkeley) Professor George Gasper Jr. (PhD Wayne State) Professor Ezra Getzler (PhD Harvard) Professor Paul G. Goerss (PhD MIT) Professor Lawrence J. Henschen (PhD Illinois) Professor; also Electrical and Computer Engineering Elton Pei Hsu (PhD Stanford) Professor Joseph W. Jerome (PhD Purdue) Professor Ehud Kalai (PhD Cornell) Professor; also Morrison Professor of Decision Science (Management and Strategy) Mikhail M. Kapranov (PhD Steklov) Professor Miguel Lerma (PhD Madrid) Lecturer and Director of Computing Bernard J. Matkowsky (PhD NYU) Professor; also John Evans Professor of Applied Mathematics (Engineering Sciences and Applied Mathematics), Mechanical Engineering W. Edward Olmstead (PhD Northwestern) Professor; also Engineering Sciences and Applied Mathematics Mark A. Pinsky (PhD MIT) Professor Stewart B. Priddy (PhD MIT) Professor

Stanley Reiter (PhD Chicago) Charles E. and Emma H. Morrison Professor of Economics and Mathematics; also Economics, Managerial Economics and Decision Sciences R. Clark Robinson (PhD California Berkeley) Professor Judith R. Sally (PhD Chicago) Professor Michael R. Stein (PhD Columbia) Professor Andrei A. Suslin (PhD Leningrad) Board of Trustees Professor of Mathematics Daniel Ioan Tataru (PhD Virginia) Professor Kari K. Vilonen (PhD Brown) Professor Amie Wilkinson (PhD California Berkeley) Assistant Professor Zhihong Xia (PhD Northwestern) Arthur and Gladys Pancoe Professor of Mathematics Sandy L. Zabell (PhD Harvard) Professor; also Statistics Eric Gallant Zaslow (PhD Harvard) Assistant Professor

## Neurobiology and Physiology

Lawrence H. Pinto (PhD Northwestern) Professor and Chair Ravi Allada (PhD Michigan) Assistant Professor Peter Dallos (PhD Northwestern) John Evans Professor of Neuroscience; also Hugh Knowles Professor of Audiology and Hearing Sciences (Communications Sciences and Disorders), Biomedical Engineering, Otolaryngology Albert I. Farbman (DMD Harvard, PhD NYU) Professor David L. Ferster (PhD Harvard) Professor Robert A. Holmgren (PhD Harvard) Professor; also Soretta and Henry Shapiro Research Professor of Molecular Biology (Biochemistry, Molecular Biology, and Cell Biology)

Michael T. Kennedy (PhD Mayo Graduate School) Lecturer William L. Klein (PhD UCLA) Professor Nina Kraus (PhD Northwestern) Associate Professor; also Audiology and Hearing Sciences, Otolaryngology Charles R. Larson (PhD Washington) Professor; also Speech and Language Pathology Jon E. Levine (PhD Illinois) Professor; also Biological Sciences Robert A. Linsenmeier (PhD Northwestern) Professor; also Biomedical Engineering Robert MacDonald (PhD UCLA) Professor; also Biochemistry, Molecular Biology, and Cell Biology Kelly E. Mayo (PhD Washington) Professor; also Biochemistry, Molecular Biology, and Cell Biology Indira Raman (PhD Wisconsin) Assistant Professor Arveh Routtenberg (PhD Michigan) Professor; also Psychology Mark A. Segraves (PhD Pennsylvania) Associate Professor Nelson Spruston (PhD Baylor) Assistant Professor Joseph S. Takahashi (PhD Oregon) Walter and Mary Elizabeth Glass Professor in the Life Sciences John B. Troy (DPhil Sussex) Associate Professor; also Biomedical Engineering Fred W. Turek (PhD Stanford) Charles E. and Emma H. Morrison Professor of Biology Teresa Woodruff (PhD Northwestern) Associate Professor Catherine Woolley (PhD Rockefeller) Assistant Professor Phyllis C. Zee (PhD Chicago Medical) Associate Professor; also Neurology

## Philosophy

Richard Kraut (PhD Princeton) Professor and Chair; also Classics Reginald L. Allen (PhD Yale) Professor; also Classics Derrick L. Darby (MA Pittsburgh) Assistant Professor John Deigh (PhD UCLA) Associate Professor Peter D. Fenves (PhD Johns Hopkins) Professor; also German Mathias Frisch (PhD California Berkeley) Assistant Professor Robert J. Gooding-Williams (PhD Yale) Professor Randolph K. Hill (PhD Illinois) Assistant Professor Cristina Lafont (PhD Frankfurt) Assistant Professor Ariela Lazar (PhD California Berkeley) Assistant Professor David Michael Levin (PhD Columbia) Professor Thomas A. McCarthy (PhD Notre Dame) John C. Shaffer Professor of the Humanities; also Communication Studies Terry P. Pinkard (PhD SUNY Stony Brook) Professor Kenneth R. Seeskin (PhD Yale) Martin F. and Patricia Koldyke Professor Brook Ziporyn (PhD Michigan) Assistant Professor; also Religion

#### **Physics and Astronomy**

David A. Buchholz (PhD Pennsylvania) Professor and Chair Gregory Anderson (PhD California Berkeley) Assistant Professor Paul R. Auvil (PhD Stanford) Associate Professor Deborah A. Brown (PhD Northwestern) Senior Lecturer Hui Cao (PhD Stanford) Assistant Professor Venkat Chandrasekhar (PhD Yale) Associate Professor Predrag Cvitanovic (PhD Cornell) Professor Pulak Dutta (PhD Chicago) Professor Donald E. Ellis (PhD MIT) Professor; also Chemistry Michael D. Faison (PhD Wisconsin) Lecturer Arthur J. Freeman (PhD MIT) Charles E. and Emma H. Morrison Professor of Physics Anupam K. Garg (PhD Cornell) Associate Professor Bruno Gobbi (PhD Swiss Federal Tech) Professor William P. Halperin (PhD Cornell) Winder-Lewis Teaching and Research Professor Vassiliki Kalogera (PhD Illinois) Assistant Professor John B. Ketterson (PhD Chicago) Fayerweather Professor of Physics; also Electrical and Computer Engineering David M. Meyer (PhD UCLA) Professor Giles A. Novak (PhD Chicago) Associate Professor Robert J. Oakes (PhD Minnesota) Professor John Peoples (PhD Columbia) Professor Jerome L. Rosen (PhD Columbia) Professor James A. Sauls (PhD SUNY Stony Brook) Professor

Heidi Schellman (PhD California Berkeley) Professor Arthur G. Schmidt (PhD Notre Dame) Senior Lecturer Michael H. Schmitt (PhD Harvard) Assistant Professor Ralph E. Segel (PhD Johns Hopkins) Professor Kamal K. Seth (PhD Pittsburgh) Professor Ronald E. Taam (PhD Columbia) Professor David E. Taylor (PhD Maryland) Lecturer and Assistant Chair Melville P. Ulmer (PhD Wisconsin) Professor Paul Umbanhowar (PhD Texas) Assistant Professor Mayda M. Velasco (PhD Northwestern) Assistant Professor Horace P. Yuen (PhD MIT) Professor; also Electrical and Computer Engineering Farhad Yusef-Zadeh (PhD Columbia) Professor

## **Political Science**

Susan Herbst (PhD Southern California) Arthur Andersen Teaching and Research Professor and Chair; also Communication Studies, Institute for Policy Research Karen Alter (PhD MIT) Assistant Professor David Austen-Smith (PhD Cambridge) Ethel and John Lindgren Professor Henry S. Bienen (PhD Chicago) Professor; also President, Northwestern University Risa Brooks (PhD UC San Diego) Assistant Professor Jonathan D. Casper (PhD Yale) Professor Dennis Chong (PhD California Berkeley) John D. and Catherine T. MacArthur Professor; also Institute for Policy Research Patricia D. Conley (PhD Chicago) Assistant Professor

Daniel Diermeier (PhD Rochester) Professor; also Managerial Economics and Decision Sciences H. Paul Friesema (PhD Iowa) Professor Edward L. Gibson (PhD Columbia) Associate Professor Jerry Goldman (PhD Johns Hopkins) Professor Michael G. Hanchard (PhD Princeton) Associate Professor; also African American Studies Michael Herron (PhD Stanford) Associate Professor Bonnie Honig (PhD Johns Hopkins) Professor Daniel Hurd (PhD Yale) Assistant Professor Kenneth Janda (PhD Indiana) Payson S. Wild Professor of Political Science Marie Thourson Jones (PhD Princeton) Lecturer; also Associate Dean, Weinberg College Andrew Koppelman (PhD Yale) Assistant Professor; also Law Michael M. Loriaux (PhD Princeton) Associate Professor S. Sara Monoson (PhD Princeton) Associate Professor; also Classics Roger B. Myerson (PhD Harvard) Professor; also Harold L. Stuart Professor of Decision Sciences (Managerial Economics and Decision Sciences), Economics Ann S. Orloff (PhD Princeton) Professor; also Sociology, Institute for Policy Research Benjamin I. Page (PhD Stanford) Gordon Scott Fulcher Professor of Decision Making; also **Communication Studies** Tong-Whan Park (PhD Hawaii) Associate Professor William S. Reno (PhD Wisconsin) Associate Professor Reuel R. Rogers (PhD Princeton) Assistant Professor Amy E. Searight (PhD Stanford) Assistant Professor

Ben Ross Schneider (PhD California Berkeley) Associate Professor Kenneth W. Shotts (PhD Stanford) Assistant Professor Wesley G. Skogan (PhD Northwestern) Professor; also Institute for Policy Research Peter A. Swenson (PhD Yale) Associate Professor; also Institute for Policy Research Kathleen A. Thelen (PhD California Berkeley) Associate Professor; also Institute for Policy Research Miguel Vatter (PhD New School for Social Research) Assistant Professor Michael Wallerstein (PhD Chicago) Professor Jeffrey A. Winters (PhD Yale) Associate Professor Yael Wolinsky (PhD Chicago) Lecturer Meredith Woo-Cumings (PhD Columbia) Associate Professor Linda M. G. Zerilli (PhD California Berkeley) Professor Psychology William R. Revelle (PhD Michigan) Professor and Chair J. Michael Bailey (PhD Texas) Associate Professor Galen Bodenhausen (PhD Illinois) Associate Professor

Thomas D. Cook (PhD Stanford) Professor; also Education and Social Policy, Sociology, Institute for Policy Research John F. Disterhoft (PhD Fordham) Professor; also Cell and Molecular Biology Alice H. Eagly (PhD Michigan) Professor; also Institute for Policy Research Karen C. Fuson (PhD Chicago) Professor; also Education and Social Policy Wendi Gardner (PhD Ohio State)

Assistant Professor

Dedre Gentner (PhD California San Diego) Professor; also Education and Social Policy Marcia Grabowecky (PhD California Berkeley) Lecturer Deborah Gruenfeld (PhD Illinois) Associate Professor; also Organization Behavior Andrew E. Kertesz (PhD Northwestern) Professor; also Biomedical Engineering, Electrical and Computer Engineering Joan Linsenmeier (PhD Northwestern) Lecturer John Lyons (PhD Illinois) Associate Professor; also Clinical Psychology Dan P. McAdams (PhD Harvard) Professor; also Education and Social Policy Gail McKoon (PhD Colorado) Professor Douglas L. Medin (PhD South Dakota) Professor; also Education and Social Policy Victoria Husted Medvec (PhD Cornell) Professor; also Organization Behavior David M. Messick (PhD North Carolina) Professor; also Morris and Alice Kaplan Professor of Ethics and Decision in Management (Organization Behavior), Marketing Susan Mineka (PhD Pennsylvania) Professor Andrew Ortony (PhD London) Professor; also Education and Social Policy Ken A. Paller (PhD California San Diego) Associate Professor Roger Ratcliff (PhD Auckland) Professor Paul Reber (PhD Carnegie Mellon) Assistant Professor Lance J. Rips (PhD Stanford) Professor Richard S. Rosenberg (PhD Chicago) Assistant Professor; also Neurology J. Peter Rosenfeld (PhD Iowa) Professor

Aryeh Routtenberg (PhD Michigan) Professor; also Neurobiology and Physiology Jeffrey W. Sherman (PhD California Santa Barbara) Associate Professor Satoru Suzuki (PhD Harvard) Assistant Professor Tony Tang (PhD Pennsylvania) Assistant Professor Leigh Thompson (PhD Northwestern) Professor; also John L. and Helen Kellogg Distinguished Professor of Organization Behavior (Organization Behavior) David H. Uttal (PhD Michigan) Associate Professor; also Education and Social Policy Peter M. Vishton (PhD Cornell) Assistant Professor Sandra R. Waxman (PhD Pennsylvania) Professor; also Wender-Lewis Research and Teaching Professor (Education and Social Policy) Richard E. Zinbarg (PhD Northwestern) Associate Professor Religion Cristina Traina (PhD Chicago) Associate Professor and Chair George D. Bond (PhD Northwestern) Professor John O. Hunwick (PhD London) Professor; also History

Professor; also History Richard Kieckhefer (PhD Texas) Professor; also History Jacob Lassner (PhD Yale) Professor; also Philip M. and Ethel Klutznick Professor of Jewish Civilization (History) Eugene Y. Lowe (PhD Union Theological) Senior Lecturer; also Assistant to the President, Northwestern University Barbara J. Newman (PhD Yale) Professor; also English Regina M. Schwartz (PhD Virginia) Associate Professor; also English Benjamin D. Sommer (PhD Chicago)

Associate Professor
Sarah M. Taylor (PhD California Santa Barbara) Assistant Professor Sara A. Vaux (PhD Rice) Lecturer Manfred H. Vogel (PhD Columbia) Professor Brook Ziporyn (PhD Michigan) Assistant Professor; also Philosophy

#### Slavic Languages and Literatures

Andrew Wachtel (PhD California Berkeley) Herman and Beulah Pierce Miller Research Professor of Literature and Chair Clare Cavanagh (PhD Harvard) Associate Professor Irina Dolgova (PhD Leningrad) Senior Lecturer Marvin Kantor (PhD Michigan) Professor Ilya Kutik (PhD Stockholm) Associate Professor Susan C. McReynolds (PhD Harvard) Assistant Professor Gary Saul Morson (PhD Yale) Frances Hooper Professor of the Arts and Humanities and Charles Deering McCormick Professor of Teaching Excellence Irwin Weil (PhD Harvard) Professor

### Sociology

Carol A. Heimer (PhD Chicago) Professor and Chair Bernard Beck (PhD Princeton) Associate Professor and Associate Chair Nicola K. Beisel (PhD Michigan) Associate Professor and Charles Deering McCormick Professor of Teaching Excellence Bruce G. Carruthers (PhD Chicago) Associate Professor Thomas D. Cook (PhD Stanford) Professor; also Education and Social Policy, Psychology, Institute for Policy Research Georgi M. Derluguian (PhD NYU) Assistant Professor Kathryn J. Edin (PhD Northwestern) Associate Professor; also Institute for Policy Research Wendy N. Espeland (PhD Chicago) Associate Professor Gary A. Fine (PhD Chicago) Professor Wendy Griswold (PhD Harvard) Professor; also English Ranjay Gulati (PhD Harvard) Associate Professor; also Organization Behavior John Hagan (PhD Alberta) John D. MacArthur Professor Gunhild O. Hagestad (PhD Minnesota) Associate Professor; also Education and Social Policy John P. Heinz (LLB Yale) Professor; also Owen L. Coon Professor (Law), Institute for Policy Research Paul M. Hirsch (PhD Michigan) Professor; also James L. Allen Distinguished Professor of Strategy and Organizations (Organization Behavior), **Communication** Studies Albert D. Hunter (PhD Chicago) Professor Eric Klinenberg (PhD California Berkeley) Assistant Professor and Institute for Policy Research Bobai Li (PhD Stanford) Assistant Professor Jeffrey Manza (PhD California Berkeley) Associate Professor; also Institute for Policy Research Aldon D. Morris (PhD SUNY Stony Brook) Professor; also African American Studies Charles C. Moskos Jr. (PhD UCLA) Professor Robert L. Nelson (JD, PhD Northwestern) Professor William Ocasio (PhD Stanford) Assistant Professor; also Organization Behavior Ann S. Orloff (PhD Princeton) Professor; also Political Science, Institute for Policy Research Mary Pattillo-McCoy (PhD Chicago) Assistant Professor; also African American Studies, Institute for Policy Research

Dorothy Roberts (JD Harvard) Professor; also Law James E. Rosenbaum (PhD Harvard) Professor; also Education and Social Policy, Institute for Policy Research Allan Schnaiberg (PhD Michigan) Professor Linda A. Teplin (PhD Northwestern) Professor; also Education and Social Policy, Psychiatry Brian Uzzi (PhD NYU) Associate Professor; also Organization Behavior Marc Ventresca (PhD Stanford) Assistant Professor; also Organization Behavior Edward J. Zajac (PhD Pennsylvania) Professor; also James F. Bere Professor of Organization Behavior (Organization Behavior)

Dean C. Garstecki (PhD Illinois) Professor of Audiology and Hearing Sciences and Chair; also Otolaryngology Margaret R. Aylesworth (MA Northwestern) Assistant Professor of Speech and Language Pathology Margaret M. Beeman (PhD Northwestern) Lecturer in Learning Disabilities Frances K. Block (MA Northwestern) Senior Lecturer in Speech and Language Pathology James Booth (PhD Maryland) Assistant Professor of Learning Disabilities Kathleen Bradley (MA Roosevelt) Lecturer in Learning Disabilities Mary Ann Cheatham (PhD Northwestern) Research Professor of Audiology and Hearing Sciences Peter Dallos (PhD Northwestern) Hugh Knowles Professor of Audiology; also John Evans Professor of Neuroscience (Neurobiology and Physiology), Biomedical Engineering, Otolaryngology Pamela Fiebig (MA Northwestern) Senior Lecturer in Audiology and Hearing Sciences Kim Fisher (PhD Oklahoma)

Assistant Professor of Speech and Language Pathology

Diane Hill (MA Northwestern) Senior Lecturer in Speech and Language Pathology Doris J. Johnson (PhD Northwestern) Professor of Learning Disabilities Mead C. Killion (PhD Northwestern) Adjunct Professor of Audiology and Hearing Sciences Dawn Koch (PhD Northwestern) Research Associate Professor of Audiology and Hearing Sciences Nina Kraus (PhD Northwestern) Professor of Audiology and Hearing Sciences; also Neurobiology and Physiology, Otolaryngology Kristin A. Larsen (MA Northwestern) Lecturer in Speech and Language Pathology Charles R. Larson (PhD Washington) Professor of Speech and Language Pathology; also Neurobiology and Physiology Cathy Lazarus (PhD Northwestern) Senior Lecturer in Speech and Language Pathology Jerilyn Logemann (PhD Northwestern) Ralph and Jean Sundin Professor of Communication Sciences and Disorders; also Neurology, Otolaryngology Karla McGregor (PhD Purdue) Associate Professor of Speech and Language Pathology Viorica Marian (PhD Cornell) Assistant Professor of Speech and Language Pathology Susan T. Mulhern (MA Northwestern) Senior Lecturer in Speech and Language Pathology Barbara Nathanson (MA Illinois) Lecturer in Speech and Language Pathology Ann Oehring (MA Northwestern) Senior Lecturer in Speech and Language Pathology Barbara Roa Pauloski (PhD Northwestern) Associate Research Professor of Speech and Language Pathology Jane Rosenberg (PhD Northwestern) Lecturer in Learning Disabilities Mario A. Ruggero (PhD Chicago) Hugh Knowles Professor of Hearing Sciences; Head, Audiology and Hearing Sciences Program Jonathan Siegel (PhD Washington St. Louis) Associate Professor of Audiology and Hearing Sciences Bruce Smith (PhD Texas)

Professor of Speech and Language Pathology; Head, Speech and Language Pathology Program

Carrie A. Stangl (MS Wisconsin) Lecturer in Speech and Language Pathology Cynthia Thompson (PhD Kansas) Associate Professor of Speech and Language Pathology Sharon L. Veis (MA Northwestern) Senior Lecturer in Speech and Language Pathology Donna S. Whitlon (PhD Wisconsin) Research Associate Professor of Audiology and Hearing Sciences Laura A. Wilber (PhD Northwestern) Professor of Audiology and Hearing Sciences Beverly A. Wright (PhD Texas) Assistant Professor of Audiology and Hearing Sciences Yi Xu (PhD Connecticut) Assistant Professor of Speech and Language Pathology Steven G. Zecker (PhD Wavne State) Associate Professor of Learning Disabilities

#### **Communication Studies**

Michael C. Leff (PhD UCLA) Professor and Chair Paul H. Arntson (PhD Wisconsin) Professor and Alumni of Northwestern Teaching Professor Dwight Conquergood (PhD Northwestern) Associate Professor; also Performance Studies Pamela J. Cooper (PhD Purdue) Professor L. Scott Deatherage (PhD Northwestern) Senior Lecturer and Director of Forensics James S. Ettema (PhD Michigan) Professor Thomas B. Farrell (PhD Wisconsin) Professor Kathleen M. Galvin (PhD Northwestern) Professor; also Education and Social Policy; Associate Dean, School of Speech Dilip P. Gaonkar (PhD Pittsburgh) Associate Professor G. Thomas Goodnight (PhD Kansas) Professor Jean Goodwin (PhD Wisconsin) Assistant Professor

Paul M. Hirsch (PhD Michigan) Professor; also James L. Allen Distinguished Professor of Strategy and Organization (Organization Behavior), Sociology Lee W. Huebner (PhD Harvard) Professor; also Journalism Jennifer S. Light (PhD Harvard) Assistant Professor Gregory T. Makoul (PhD Northwestern) Assistant Professor; also Medicine Thomas A. McCarthy (PhD Notre Dame) Professor; also John C. Shaffer Professor of the Humanities (Philosophy) John L. McKnight (BS Northwestern) Professor; also Education and Social Policy, Institute for Policy Research Peter V. Miller (PhD Michigan) Associate Professor; also Associate Dean, School of Speech Newton N. Minow (JD Northwestern) Annenberg University Professor of Communications; also Management, Radio/Television/Film Barbara J. O'Keefe (PhD Illinois) Professor; Dean, School of Speech Benjamin I. Page (PhD Stanford) Professor; also Gordon Scott Fulcher Professor of Decision Making (Political Science) Irving J. Rein (PhD Pittsburgh) Professor Michael E. Roloff (PhD Michigan State) Professor James Schwoch (PhD Northwestern) Associate Professor Lynn Van Swol (PhD Illinois) Assistant Professor James G. Webster (PhD Indiana) Professor; also Associate Dean, School of Speech David Zarefsky (PhD Northwestern) Professor

#### **Performance Studies**

Carol Simpson Stern (PhD Northwestern) Professor and Chair Paul Berliner (PhD Wesleyan) Professor; also Jazz Studies and Pedagogy, Musicology

Dwight Conquergood (PhD Northwestern) Associate Professor; also Communication Studies Tracy Davis (PhD Warwick) Associate Professor; also English, Theatre Micaela di Leonardo (PhD California Berkeley) Professor; also Anthropology Margaret Thompson Drewal (PhD NYU) Associate Professor Frank J. Galati (PhD Northwestern) Adjunct Professor E. Patrick Johnson (PhD Louisiana State) Assistant Professor Susan A. Manning (PhD Columbia) Associate Professor; also English, Theatre Nioki McElroy (PhD Northwestern) Adjunct Assistant Professor Sandra L. Richards (PhD Stanford) Professor; also African American Studies, Theatre Mary Zimmerman (PhD Northwestern) Professor

## Radio/Television/Film

Mimi White (PhD Iowa) Professor and Chair Annette Barbier (MFA Art Institute Chicago) Associate Professor Michelle Citron (PhD Wisconsin) Professor M. Scott Curtis (PhD Iowa) Assistant Professor Michael R. Elyanow (MFA Northwestern) Lecturer Scott D. Erlinder (MFA Columbia College) Senior Lecturer Dana H. Hodgdon (MA Northwestern) Associate Professor Laura Kipnis (MFA Nova Scotia College of Art and Design) Professor Chuck Kleinhans (PhD Indiana) Associate Professor

Lawrence W. Lichty (PhD Ohio State) Professor Newton N. Minow (JD Northwestern) Annenberg University Professor of Communications; also Communication Studies, Management Rick G. Morris (LLM NYU) Assistant Professor David Tolchinsky (MFA Southern California) Assistant Professor

#### Theatre

Bud Beyer (BS Northwestern) Professor and Chair Joseph Appelt (MA Michigan) Associate Professor Samuel C. Ball (MFA Yale) Professor Susan V. Booth Adjunct Professor James F. Coakley (PhD Northwestern) Professor Rives Collins (MFA Arizona State) Associate Professor Jonathan Darling (MFA Case Western Reserve) Assistant Professor Tracy Davis (PhD Warwick) Associate Professor and Head, Interdisciplinary PhD Program in Theatre and Drama; also English, Performance Studies David Downs (MA Loyola Chicago) Associate Professor Robert Falls (BFA Illinois) Adjunct Professor Barbara Gaines (BS Northwestern) Adjunct Professor Linda Gates (MA NYU) Senior Lecturer Cindy Gold (MFA Alabama) Assistant Professor

Leslie A. Hinderyckx (PhD Northwestern) Professor and Head, MA Program Virgil Johnson (MA Northwestern) Professor Craig Kinzer (MFA NYU) Associate Professor Susan A. Lee (PhD Northwestern) Professor and Head, Dance Program; also Education and Social Policy Susan A. Manning (PhD Columbia) Associate Professor; also English, Performance Studies Sandra Marquez (MFA Illinois) Adjunct Professor Joseph Mills (PhD Temple) Assistant Professor Dominic E. Missimi (MA Wayne State) Associate Professor and Head, Music Theatre Program; also Voice and Opera Dawn Mora (MA San Diego State) Assistant Professor David Petrarca (BFA Yale) Adjunct Professor Mary Poole (PhD Stanford) Assistant Professor Sandra L. Richards (PhD Stanford) Professor; also African American Studies, Performance Studies Linda Roethke (MFA Iowa) Associate Professor Todd Rosenthal (MFA Yale) Adjunct Professor Kim Rubinstein (BS Northwestern) Lecturer Billy Siegenfeld (MA NYU) Professor Lara E. Teeter (BA Oklahoma City) Assistant Professor Joseph Tilford (MA Cincinnati) Associate Professor and Head, MFA Programs Ann Woodworth (MA Northwestern) Associate Professor

In compliance with The Student Right to Know Act, the graduation rates are as follows:

Freshmen entering in	1994	1993	1992	1991
Percentage graduating in 4 years Percentage graduating in 5 years Percentage graduating in 6 years	82.48	82.3	81.2	82.2
	91.7	91.06	90	89.9
	92.06	91.8	90.5	90.3
Total entering freshmen	1865	1903	1889	1946

The five-year totals include students in programs designed to be completed in five, such as cooperative engineering education, combined bachelor's/master's programs, and dual bachelor's programs.
